

# Remote Working

## Inspiring Better Connected Remote Workforces

Enabling productive and secure remote working has never been more relevant and important than it is today. Traditionally the “last-mile” connectivity to an employee’s home has fallen outside the remit of the IT team, however, Covid-19 and long-term migration to remote working is forcing IT leaders to rapidly rethink that model.

Our specialist mobile services are designed to meet the needs of remote workers in large businesses that are struggling to work productively from home using their existing home Wi-Fi and broadband. For corporate IT teams, our ‘plug and play’ mobile networking solutions are easy to deploy and can quickly enhance the remote worker’s connectivity. Providing a dedicated business connection that can reduce business security risks, whilst also enabling IT teams to deliver proactive remote support and assistance when it’s required.

## IT Challenges

**This rapidly transforming environment, creates a new range of challenges for IT leaders and teams:**

- Providing stable, secure and high-speed remote access to company resources, servers and data.
- Ensuring that corporate and mobile devices remain protected at all times, especially where connectivity relies on home Wi-Fi and broadband.
- Delivering high quality connectivity and support tailored to the needs of different users across many locations.
- Making sure that mobile costs and usage don’t spiral out of control, at a time when budgets simply have to be met.

# Empowering Remote Working

## »» Empowering Effective Home Working

By deploying the right blend of mobile services, networking technology and security, we're empowering IT teams in large businesses to provide improved remote worker connectivity and support for users that are struggling to work productively from home using their existing home wi-fi and broadband.

## »» Enabling Better Network Connectivity

By leveraging 4G, 5G and IoT based connectivity services (both in the UK and Internationally) from across multiple carriers, we're helping IT teams to rapidly extend high quality connectivity to remote workers and business locations wherever they are located, for both short and long-term requirements.

## »» Increasing Business Productivity

By combining the right technologies and networking services, we're enabling IT teams to more easily tailor services to address the needs of their business users and departments. Helping to streamline support, enabling new IoT based services and rationalising legacy technologies like VPN's, to dramatically improve employee and business productivity.

## »» Enhancing Mobile & Data Security

By applying security and management controls into both the network and device layers of our services, we are helping IT teams to gain real time visibility & control of their mobile enabled network. Helping to reduce cyber & security threats, protecting corporate data & improving support for remote workers & locations.

**Our Simovate Mobile Networking Services include a comprehensive and tailored support package as standard; along with integrated access to a wide range of innovative mobile network, cloud and networking technologies. All delivered by a named team, under one simple service agreement:**

- Combine multiple mobile networks & services under one managed contract
- Proactive tariff & usage management including in month data usage alerts & reporting
- Informative management reporting through Utelize's "Inview Mobile" Portal
- Independent specialist advice on mobile networking, security & technology
- Optional public & private IP addresses - for enhanced network management & control
- Optional managed router & network monitoring - for 24/7 365 remote location support
