# Transport, Logistics & Connected Vehicles

## Enabling Better Connected Vehicles & Technology

IoT and Mobile enabled technologies are transforming the way that transport and logistics firms can deliver excellent services and improve business productivity. The dawning of this new era of connected vehicles is bringing together transport and logistics providers and mobile networking technologies to accelerate this innovation even further. This transformation is happening fast, driving real-time customer service applications, improving driver and vehicle safety and reducing business operating costs.

At Simovate we help Enterprise IT leaders to blend the right combination of 4G, 5G and IoT mobile networks and next-generation data networking technologies to address these challenges. Inspiring new ways to deploy and manage on-board and depot technologies, enabling consolidation of connectivity onto a single connected mobile gateway and improving security with the use of private mobile networking technologies. For corporate IT teams, our 'plug and play' mobile networking solutions are easy to deploy and can quickly enhance vehicle connectivity and coverage, whilst providing IT with enhanced control and visibility when it's required.

## IT Challenges

**This rapidly transforming environment, creates a new range of challenges for IT leaders and teams:**

> Providing secure & real time rapid transfer of confidential data to communicate with company systems & to update tracking & location services.

> Ensuring IT teams can effectively access on board systems & technology to provide remote support to vehicles & drivers.

> Delivering high quality connectivity that can keep their vehicles & technology connected at all times when on the road.

> Making sure that mobile costs & usage don't spiral out of control, at a time when budgets simply have to be met.

# Empowering Connected Thinking

## >> Enabling Better Connected Vehicles

By leveraging 4G, 5G and IoT network services from across all mobile networks, we can help IT teams to deliver high-quality mobile connectivity that is tailored business need, removing the reliance on the service of just one mobile network. All delivered as part of one fully managed service and contract.

Our managed services cover all UK networks, and we can also deliver innovative "Multi-Network" services that can access all UK networks on an intelligent e-SIM, with a wide range of configurable data allowances. Our services can also be deployed across the EU/Europe.

## >> Improving Business Productivity

By combining the right mobile network with the right networking devices and technologies, we can help IT teams to significantly enhance mobile signal where it's poor (both for vehicles and handheld devices) to better meet the businesses needs and to keep drivers and services working efficiently. And with private mobile networking, we can help IT teams to streamline support, invoke real-time network and performance monitoring without the need for legacy technologies like VPN's.

## >> Enhancing Data Security & Control

By applying security and management controls into both the network and device layers of our services, we can help IT teams to address the challenges of managing security and accessing corporate systems and data in a range of innovative ways that are not possible with traditional mobile broadband and data services.

With both internet-based services and private mobile networking services (that bypass the public internet entirely) we can help your IT team to reduce mobile worker cyber & security threats, protect corporate and confidential customer data, whilst improving support for drivers and remote support teams.

Our Simovate Mobile Networking Services include a comprehensive and tailored support package as standard; along with integrated access to a wide range of innovative mobile network, cloud and networking technologies. All delivered by a named team, under one simple service agreement:

- Combine multiple mobile networks & services under one managed contract
- Proactive tariff & usage management including in month data usage alerts & reporting
- Informative management reporting through Utelize's "Inview Mobile" Portal

- Independent specialist advice on mobile networking, security & technology
- Optional public & private IP addresses - for enhanced network management & control
- Optional managed router & network monitoring - for 24/7 365 remote location support
