# AssurityOne: The most advanced cyber security services available - offered as 24/7 x 365 managed solutions for SMBs, continuously delivering superior defences for all devices.

As an SMB you can benefit from the latest enterprise-grade cyber security technologies, brought to you by AssurityOne in affordable packages - and expertly managed for you by UK-based leading cyber professionals.

- 41% SMB's have suffered cyber attacks in the last year
- 20% were attacked 6 or more times in the year
- Est 1.3 million SMBs would fail and collapse after a successful cyber attack

## SMBs deserve the latest top level cyber defences too

Daily headlines of devastating breaches are a constant reminder that the latest waves of cyber-attacks are indiscriminate; it is no longer just large organisations that are being hit, more and more small businesses end up as "collateral damage", becoming crippled by sophisticated malware including ransomware.

### Many organisations never recover.

Two of the biggest hurdles facing small businesses are the annual costs of deploying enterprise-grade defences and the costs and availability of the skilled resources required to manage constant alerts across their systems.

AssurityOne's packages solve these issues, bringing the same levels of cyber protection that governmental and large organisations enjoy to smaller companies.

## Let the experts look after your cyber security, while you look after your business

All Assurity packages are expertly managed by our, security cleared, cyber security partners within their Security Operations Centre based near Cheltenham.

Each package is quick and easy to install and, once set up, our experts will monitor and look

after your installation for you, which means you receive "set and forget" protection, with little or no impact on your IT team.

Optional additional services:

- SOC Analysis and Alerting
- Threat Intelligence
- Microsoft Azure AD API Integration
- Microsoft Office 365 API Integration (Exchange / SharePoint / Teams)

### AssurityOne Packages:

Complete Protection for SMBs delivering ground breaking protection across all your devices

Feature	ASSURITYONE	ASSURITYONE PLUS	ASSURITYONE TOTAL
