*Adding Value,
Reducing Risk*

Company Profile

Founded in 1997, Central Management Catalogue Agency (UK), or CMCA(UK) as we are also known, is an independent Through-Life Support, Procurement and Codification subject matter expert. We are fully accredited to ISO9001:2015.

We provide our specialist services to numerous industries and sectors including: Defence, Civil Aviation, Marine, Oil & Gas, Pharmaceutical and Transport to name but a few. Additionally we are a long term trusted supplier to the UK Ministry of Defence.

CMCA(UK)'s services and skill sets include bespoke solutions for Obsolescence Management including: Component Monitoring (regularly checking the availability of components); Obsolescence Mitigation Investigations (conducting investigations to find solutions to obsolescence issues) and bespoke software solutions to help you manage obsolescence within your own processes. In addition we offer a range of Through-Life Support technical services including: REACH Management, Long Term Storage facilities and general integrated Logistic Support activities.

We offer a comprehensive Procurement Service specialising in sourcing and supplying both military and commercial hard to find items. We are proud to be the UK's exclusive supplier of NATO Codification allocating, maintaining and servicing NATO Stock Numbers (NSN's) on behalf of the United Kingdom National Codification Bureau (UKNCB).

Our Customers include:-

- UK MOD
- Safran Electrical and Power
- Rolls-Royce
- BAE Systems
- Collins Aerospace
- Harris Defence Ltd
- Pfizer
- Canadian Government
- Brazilian Navy
- Babcock
- Ultra Electronics
- AKER Solutions
- Airbus
- General Electric
- Hilti International
- Lockheed Martin
- Unipart Rail

NATO Codification

We are the ONLY contractor authorized to create and maintain NATO Stock Numbers (NSNs) on behalf of the UK Ministry of Defence (UK MOD). In addition to supporting the UK MOD directly, we offer commercial Codification services to the Defence Industry and beyond:

- In-house Codification experts with over 400 years of combined knowledge
- World class client E-Tasking support services in preparation for the allocation of an NSN
- Collection and cleansing of Codification / Cataloguing source data
- Individual and batch Codification / Cataloguing screening services

Obsolescence Management Solutions

We provide an extensive suite of Obsolescence Management services including:

- Writing Obsolescence Management Strategies and Plans
- Conducting Risk Analyses iaw IEC62402:2019
- Producing Risk Assessment Reports and Risk Registers
- Forecasting future supportability and new builds of equipment
- Bill of Material (BoM) collation and cleansing
- Monitoring, analysis and reporting of BoM obsolescence risks
- Weekly reporting of Part Change Notifications (PCNs), Status Change Notifications (SCNs), Last Time Buy (LTB) and End of Life (EOL) notices affecting your BoM
- One-off Obsolescence Sweeps/Health Checks

REACH Management Services

As a REACHReady Approved Service Provider we deliver REACH Management and Advisory services designed to assist our clients in understanding and complying with the REACH legislation. Our REACH services are all standalone but often integrated with an Obsolescence Management solution. They are fully customizable and include:

- Assessment of responsibilities for the registration of substances under REACH.
- BoM analysis to identify the use of Candidate, Authorisation and Restriction List substances
- Analysis of upstream and downstream supply chains and associated impacts and obligations in relation to REACH legislation
- Review of internal MRP/ERP systems and supply chain management to assess its compliancy with REACH obligations
- Ongoing BoM monitoring and the creation of Article 33 declarations
- REACH awareness sessions and bespoke workshops

Procurement Solutions

A quality, cost, delivery (QCD) focused approach.

We take considerable pride in the fact that we are experienced in various aspects of procurement, providing various solutions, and continuous support to our customers where we are able to:

- Handle detailed contractual requirements,
- Provide Managed Service solutions
- Ensure SQA is an integral aspect of our solutions
- Process and support various ad-hock difficult to source needs
- Provide Unlimited Scope support
- Ensure True Source
- Deliver a QCD philosophy

Component Monitoring Services

Our bespoke component monitoring services cover ALL components and technologies across your ENTIRE BoM. We offer:

- Experienced Component Engineers to cleanse and accurately identify BoM components
- Regular and reliable updating of component supportability risks
- Fully indentured and tailorable reporting formats including customer exceptions and PCN / SCN filtering
- In-house part number and OEM part number cross-referencing and reporting
- No licence fees, pricing structures tailored to suit customer needs

Technical Documentation

We are experts in the production of all forms of technical documentation in accordance with S1000D and we utilize industry standard software packages to produce military and commercial technical publications in both electronic and hard copy formats. We offer technical documentation services for any size or scope of task including:

- Army Equipment Support Publications (AESPs)
- Complete Equipment Schedules (CESs) and Equipment Breakdown Structures (EBSs)
- Illustrated Parts Catalogues (IPCs)
- Military and Commercial Operating, Maintenance and Repair Manuals

Obsolescence Mitigation Resolutions

When obsolescence impacts your project, we offer highly skilled and experienced resources to:

- Identify, source and procure critical components and assemblies
- Liaise with the OEM to establish whether a one-off Life Time Buy or continued production is possible
- Investigate options for Form, Fit, Function and Interface equivalents, alternatives or substitutes
- Research possible after-market solutions
- Identify options for reverse engineering

Long-Term Storage

We are a recognized Subject Matter Expert in the field of Long Term Storage of electronic and electromechanical components:

- Secure, 24 hour monitored dual-site purpose-built Nitrogen and Dry Store storage facilities
- ALL components are processed through our accredited Inventory Management System, providing assurance that your components are thoroughly indexed, controlled and fully traceable
- Components are processed through a purpose-built Electrostatic Protected Area with full ESD controls that extend from the inspection facility through to the secure storage location

Training

We develop and deliver technical training covering all aspects of:

- IIOM accredited (AIIOM) Obsolescence Management Training
- NATO and Commercial Codification for military and industrial application
- Bespoke training courses can be developed upon request
