DEVOPS-AS-A-SERVICE

CiCloud DevOps aaS is a computing service model that allows the easy deployment of DevOps environments in a scalable fully managed way for Developers and IT Management. Put simply, our solution allows users to deploy complex environments using very little technical knowledge and time. Many things that used to require highly-trained admins and DevOps and took many hours of configuration, can all be done in a few clicks.

⭐ WHY CICLOUD DEVOPS AAS?

• Our DevOps aaS is very Easy-to-use

• It includes many 3rd-party Integrations

• Next generation container-based cloud platform: Includes certified runtimes for Java, PHP, Ruby, Python, .NET, Node.js, and Go

• Zero code change: Deploy and run traditional monolithic applications and cloud-native microservices with no code changes and zero application redesign. Deploy via archives, FTPS/SFTP, GIT/SVN or via integrated plugins

• Reduce your IT infrastructure management costs & efforts and focus on your business growth

• The integrations are comprehensive and very elegantly organized. You can select them from the clean marketplace panel or deploy using familiar tools

• You only pay for what you use - Billing by resources-used

• Application-based resource management - Deploy the application and then decide how many servers to support the application.
