

"A control tower for your logistic hub"

Optimise your inbound traffic, get an overview of your operations, make decisions

October 2015

Over **25378** Businesses used
Voyage Control.

Amazing client reviews

"As a small business owner I much prefer exhibiting at Olympia London over other venues since they use Voyage Control to make the transport much easier and less stressful for their exhibitors"

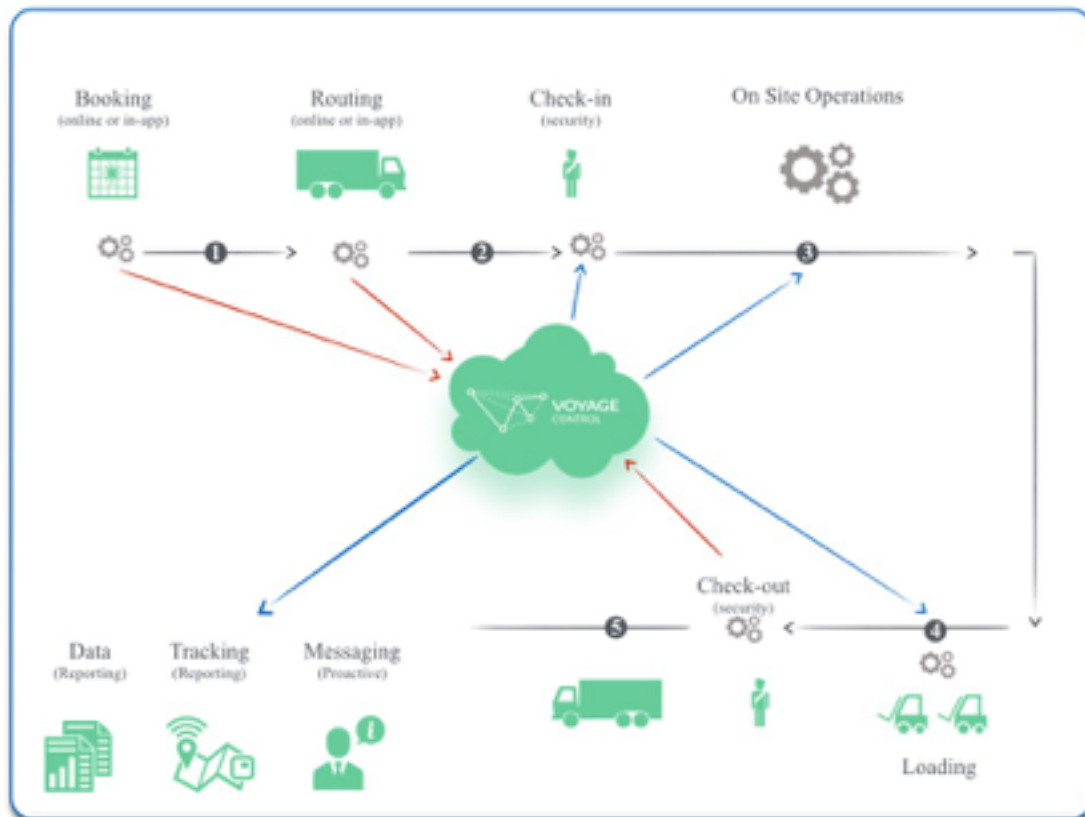

Over **49875** journeys have
been made using the platform

What is Voyage Control?

Intelligent freight scheduling

Voyage Control is a SaaS company dedicated to solving global freight and logistic inefficiencies. There are multiple challenges in today's logistics environment - it's our mission to provide a simple, cloud based management solution that opens up communication channels and provides greater insight for our clients. At its core, Voyage Control acts as an air-traffic control system, scheduling traffic into busy transport hubs to seamlessly improve the flow of information between a hub and logistics provider.

Logistics hubs often suffer from fragmented operational processes resulting in costly, time consuming inefficiencies. On average distribution/logistics costs represent up to 10% of business revenue. Voyage Control provides the tools to effectively manage and ultimately reduce these inefficiencies.

What makes Voyage Control Stand out from the competition?

Feature rich

Scheduling

A dynamic scheduling platform based on complex backend algorithms and customer specified rules.

Mobile

Mobile apps to improve efficiency for you and your suppliers.

Cloud based

Everything is up there. It's live, no hassle, no effort required - we do it all for you.

Environmental

Reduce a hub's indirect harmful emissions, noise pollution and congestion, by streamlining traffic flows.

User Friendly

Seamless installation, no hardware required, easy to use.

Tracking

Live vehicle tracking enabling proactive decision making.

Customer Service

At our forefront is top quality customer service for both you and your clients.

Communication

Opens up vertical communication channels between hubs and suppliers facilitating proactive site management.

Customisable

We customise our platform to meet the requirements of individual hubs.

Data

Collect and present analytical KPI's, allowing hubs to improve neighbourhood relationships and facilitates strategic decision making.

Voyage Control in more detail...

Key features

Administration portal

Customise and control your events; create phases of operations, applying restrictions as and where necessary. Plan and have complete visibility of your incoming traffic by controlling vehicle types, user types, allocating timings and more...

Booking portal

Suppliers, exhibitors and contractors book vehicles and deliveries in to your hub providing all the information you require. If you need specific information from your clients outside of the information requests we already have in place, these can be factored in as part of the end user process.

Traffic portal

The traffic portal provides live visibility and control from a different angle to the administration portal. The data promotes proactive decision making and improves the hubs overall efficiency. The module provides the hubs management to approve or reject bookings, track vehicles en route to the hub, list complaints and provides an update of who has checked in/out and who requires additional resources. This module provides the following key features:

- Detailed monthly, weekly and daily overviews of all bookings.
- Detailed analytical display of the user's journey, timeliness, capacity and complaints data.
- Environmental reporting, government compliance (FORS, CLOCS etc) and BREEAM accreditation data.
- Real time visibility of deliveries (location of vehicles, when deliveries arrive, live ETA).
- Proactive communication, in response to any incidents.

Mobile app

The cross-platform mobile app will enable your client's to book from anywhere, not just from behind a computer screen. The app will enable live tracking and communication from management to drivers/suppliers booked in to make a delivery.

- Link to traffic data (congestion/ traffic incidents) in order to reduce disruption.
- Location sharing.

Technical Data:

Web-Browsers Supported

- Internet Explorer 10+
- Safari 5+
- Google Chrome
- Mozilla Firefox

OS Supported

- Android 4.0+
- iOS 6+

Other

- Hosted on AWS (with an uptime of 99.99%)
- Fully SSL secure
- Front end is HTML5/CSS3/JS
- Mobile apps in ionic
- Backend in php
- API in Django
