

St John's Church of England Primary School, Watford

“We very much appreciate that the towers are on wheels which really suit us in our three storey building. This enables more mobile approach to IT. The children have found them very accessible and easy to use which equals less fuss and contributes to the positive learning environment. Although the price is higher than other units I was adamant that I needed them to fit in with our particular colour scheme and building design and your company was very flexible in creating a bespoke service. The whole user experience is simply better than any of our other charging units.”

Helen Langeveld – Head teacher

Goals

Primary goal to provide a product that is easy for primary students to use, durable and has great organisation features for devices with a small footprint.

The school is investing in Chromebook devices for the children and needed a flexible scalable solution to meet their growing and future needs and the Towers met all of these criteria as they have 3 mounting options.

“
We were looking for a product that was child-friendly to use, didn't have a massive footprint, and was also mobile.
”

PowerGistics ticked all the boxes and gave us our custom colours which was fantastic. It was great to find a product that could have custom colours to fit in to each of the different themes on each floor.
