

# COMPUTER BOOKING MADE EASY

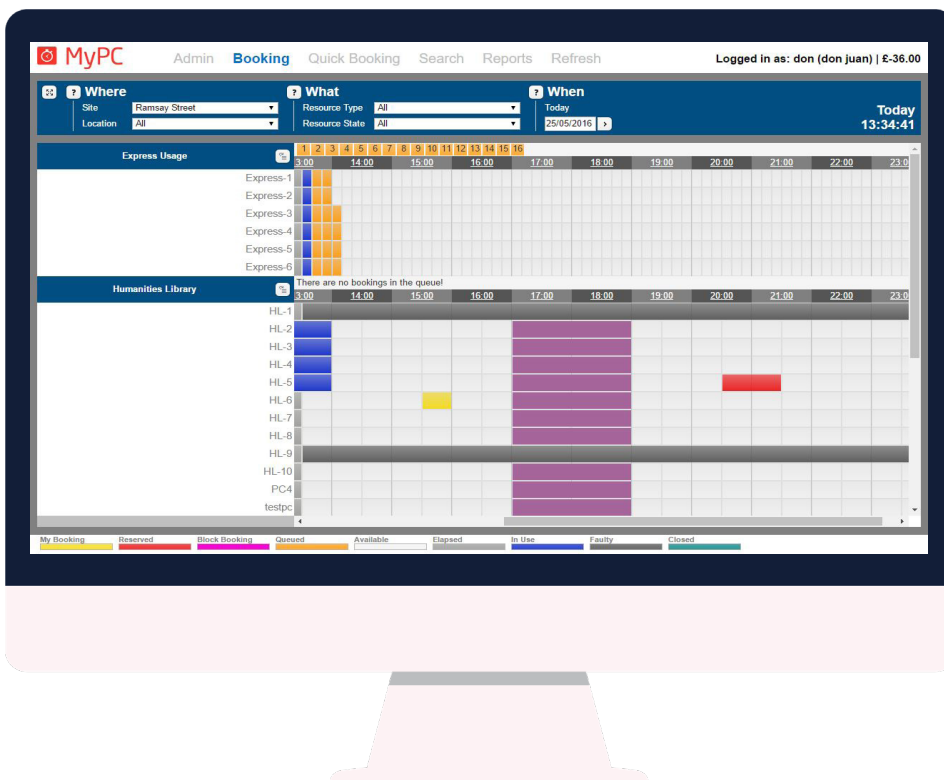

## INTRODUCING MyPC

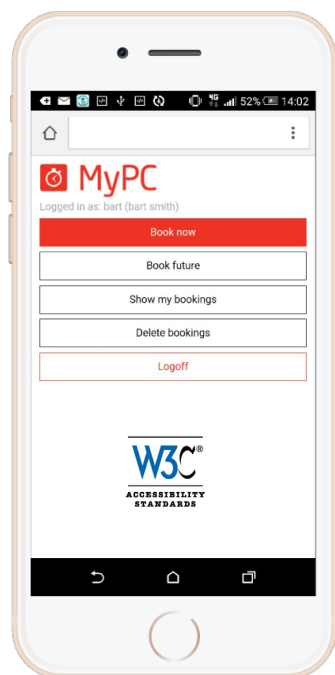

MyPC is the ultimate solution for computer booking and access management. Widely used in Education and Public Libraries it provides librarians and IT managers with complete control over bookings and users' sessions.

MyPC's unique handling of self-service bookings allows the optimisation and promotion of fair usage whilst saving staff time. With hundreds of customers worldwide MyPC continues to grow and our dedicated development team are constantly working on implementing new features based on customer feedback.

"MyPC has an easy-to-learn user interface, is easy to configure and has a good range of usage reports available. Being a server-based system the ability to manage the computers from any work station is a real bonus. We also use the MyPC Maps module to provide visibility of [almost] live library computer availability to students, both through maps embedded in our VLE and on display screens around the College"

Mr Paul Connor,  
Learning Resources  
Technologist,  
Bath College

“MyPC was chosen after an extensive research period by a group of staff looking at IT provision for the new City Library. The group looked at various products on the market, but the features of MyPC including usability and specific booking functions led to the library choosing it ahead of others.”

Andrew Scrogam,  
Systems Manager,  
Newcastle Libraries

## SEARCH & AVAILABILITY

MyPC makes it easy to find exactly what you are looking for. You can specify the hardware or software you require, and get a clear overview of computers that are available, in use, and reserved.

The Maps module provides a simple way to present a floorplan clearly indicating the location and availability of computers. See more details below.

## OPTIMISE UTILISATION

MyPC manages the varying demand for computers at different times of the day by adjusting the settings controlling session lengths. Automated no-show cancellations ensure that computers are not out of use if people do not attend pre-booked sessions.

## COMMUNICATION

Each booking is confirmed to the user by email. Librarians can send free-text or a choice of pre-defined messages to users during sessions. MyPC can integrate with your library management system to inform users of their library fines and outstanding items helping you to get books returned and to recover costs.

## BOOKING METHODS

As well as walk-up usage, MyPC offers queued, advanced and staff bookings, as well as flexible block and recurring bookings for staff and tutors. There is a quick booking option which allows you to book a session with just two clicks!

## REPORTING

MyPC provides comprehensive reporting on computer utilisation, bookings and no shows. The reporting scope includes faulty computers and banned users and the Unique Users report shows how many individuals make use of the computer resources you provide. All reports can be scheduled for automatic delivery by email and can be exported into common file formats including Excel, PDF, and CSV.

## SIMPLICITY

MyPC is easy for everyone to use. Self-service booking requires no pre-instruction. All booking, administration and reporting is available anywhere, all from a single web browser. You don't require any technical skills to be in full control of MyPC.

## FLEXIBILITY & CONTROL

MyPC offers limitless possibilities to control access to your computers. It fits straight into your network providing full support for Active Directory, Novell eDirectory and other LDAP compliant systems. It integrates with your environment regardless of the Library Management System in use. MyPC works with Windows and Mac client platforms, as well as Virtual Desktop Infrastructure (VDI) environments. You can add your corporate logo and colour scheme to the client logon (status screen) and booking screens. All text can be internationalised to support any European language.

## MyPC MAPS MODULE

MyPC Maps is a web based optional add-on module designed to work in conjunction with the MyPC resource state API. MyPC Maps provides a simple way to design and present a floor plan of your chosen site(s) to clearly illustrate the location and availability of your bookable PCs. MyPC Maps will show which PCs are In Use, Reserved, Available and Not Available all in a colour coded format. Scrolling maps can also be set up to reflect multiple maps of different locations on the one screen.

## WHY MyPC

MyPC is a complete solution with no hidden costs. It utilises cutting-edge web technologies to provide a straightforward experience to both administrators and end-users. Our dedicated developers ensure the product is constantly updated to meet customer requirements. In-house quality assurance and testing teams ensure that MyPC remains the market leader and best of breed software.
