

Advanced in-class learning solution

The KAIT@SCHOOL™ solution uses a digital pen that captures each stroke of students' written offline work. Then, when uploaded, the KAIT system stores and analyzes students' work.

Deep AI-Enhanced Learning Insights

Teacher prints an assessment and dot pattern on plain paper

Student takes an assessment in class with the KAIT Pen

Pen connects to dock to upload work to the KAIT class website

Processing by the KAIT system

KAIT system receives information, the software analyzes student answers and behavior, the system then provides individualized information and interventions for every student.

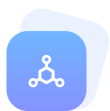

Key Product Features

Student cognitive and behavioral metrics (CBM)

Student writing recorded for playback as Pencast™

AI generated practice problems

Automatic grading

Question diagnostics
