

# Remote Proctoring Features

## Automated Proctoring

- Proctorio's software flags potential breaches of integrity during the exam based on the settings the instructor selects while setting up the exam. Flagged behaviors are based on the average behavior found throughout the course during the exam. Only the instructor can review exam attempts.
- Automated Proctoring is the most popular service Proctorio provides and is always unscheduled, so students can take exams when it is most convenient for them.

## Live Proctoring

- Proctorio employees, trained extensively, are able to monitor exams in real time without scheduling. It allows for automatic intervention when necessary, a full recording, and reporting of the exam attempt on demand.

## Lockdown Browser

- When enabled, this setting allows instructors to limit test taker access to other websites, applications, downloads, and functionalities of their personal device during their exam attempt.

## Content Protection

- Proctorio employs WebSweep, an automated web monitoring tool that alerts instructors when exam questions have been posted online. If matching exam questions are found online, instructors can use the Report feature to initiate content take-down.
- Proctorio's Mobile Lock technology—powered by GraphLock—works on all iOS and Android devices to create a fair environment for all test takers by preventing the use of mobile devices during exams.

## LMS Integration

- Proctorio integrates seamlessly with any existing LMS. This allows students to enter an exam with the same credentials that they would use for their LMS, so no additional personally identifiable information (PII) is ever required.
