# Jamworks

Students want lecture capture, Institutions want control of their digital content

Jamworks is a simple-to-use lecture capture platform with sophisticated security technology that gives institutions full control over who can access their course content, in what format, for how long and seamlessly integrates with existing systems...

Take back control of your digital content

Even before the switch to remote-learning, students were already recording, sharing and interacting with your course content digitally. For the first time, Jamworks gives you full control over who can and cannot see your lectures online.

Say hello to state-of-the-art security

We use high-end encryption alongside the latest key management technology to protect your data, even after you have shared it with your students.

Wave goodbye to content leakage

The Jamworks audio watermark protects your intellectual property and ensures that your course content does not turn up online anywhere that you don't want it to.

Improve the student experience

Jamworks records video, transcribes audio and allows students to highlight the most important parts of a lecture at the click of a button. This vastly improves the effectiveness of learning and saves an incredible amount of time when it comes to revision.

Increase student engagement

Our automatic transcription tool liberates students from constant note-taking and allows them to fully focus and engage with the lecture that you spent so much time preparing.

For in-person, remote and blended learning

Our desktop widget and mobile app work in tandem to improve the student experience, no matter the location.

Thousands of students around the world ❤ Jamworks

Easy to use, stress free and barely requires thinking.
Molly
University of Winchester

A user-friendly tool that has proven to be extremely helpful for students struggling with online university work.
