

## Managing School Safety in the Digital Age

---

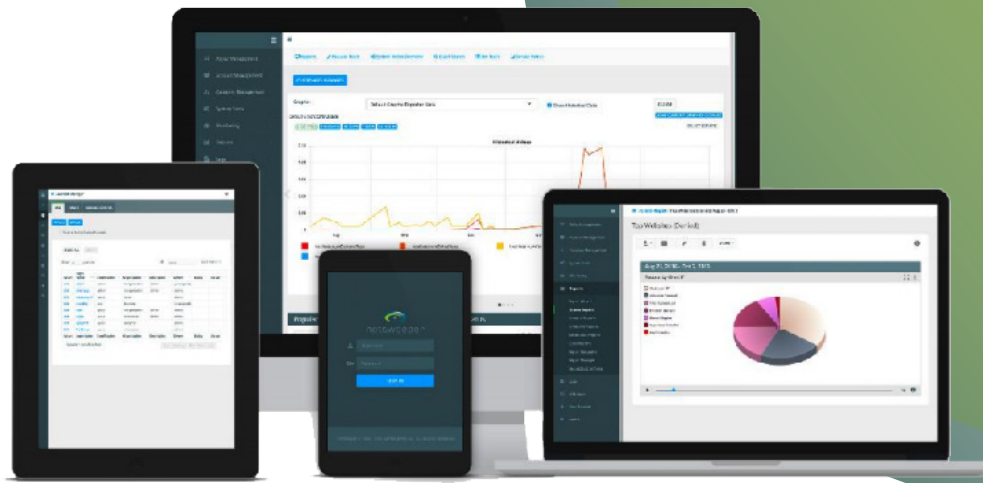

Students today have unlimited access to the wealth of information that the internet provides. While the internet provides students with incredible opportunity, it also comes with immense danger. Children face radicalisation, exposure to harmful and inappropriate content and cyberbullying online. The consequences are immense.

In a large survey of young people who had been cyberbullied, 41% had developed social anxiety, 37% had developed depression, 26% had suicidal thoughts, and 25% had self-harmed.

As parents, teachers and school leaders look for ways to ensure students are protected both online and offline, Netsweeper has developed a comprehensive School Safety Ecosystem that provides the right technology to help digital safety leaders meet the demands of today's online challenges.

Protect – Monitor – Prevent

Monitoring student activity online, in addition to filtering, introduces an additional level of student safeguarding by providing you with the opportunity to be proactive when a student is at risk.

## OnGuard™

Netsweeper OnGuard™ is a content monitoring and reporting platform that helps you meet safeguarding initiatives and protect at-risk students by identifying harmful actions in real-time, allowing you to take proactive steps for early intervention, safety and the promotion of students well-being. OnGuard is integrated into the proven Netsweeper platform and leverages our advanced categorisation technology.

## nFilter™

Netsweeper nFilter™ provides real-time analysis, filtering, and blocking of online content to protect students. Our platform has been developed to meet OFSTED requirements and the Prevent duty legislation. Our off-network filtering capabilities provides peace of mind and allows students connected to your network to learn safely outside the classroom on school-issued devices.

## nClient™

Netsweeper nClient™, part of the Netsweeper Education Ecosystem, works with the Netsweeper central platform to extend web filtering and digital monitoring to student devices, ensuring they remain protected when they leave the school's network. Digital safety leaders can remain confident that students will not browse harmful and dangerous material when they are learning remotely. Compatible with Windows, MacOS, Chrome, Android and iOS.

### ABOUT NETSWEEPER

Netsweeper is a leading provider of online student safety solutions worldwide. Our suite of software and network solutions helps schools and multi-academy trusts safeguard students, regardless of how they access the online world. The scale of the internet is larger than any list and larger than any one network. Netsweeper uses advanced AI to identify harmful online content, contact, conduct and commerce in real-time, and our platform has been developed to meet OFSTED and Prevent Duty compliance requirements. Founded in 1999, Netsweeper has a global presence servicing a network footprint of over 1 billion users. Our UK operational centre is located in Leeds.
