

# Welcome to the **new era** of the **videoconferencing**

Help your students outside the classroom with **ClassInTheBox**.  
Record all your classes.

## Feel the 4 effects

ClassInTheBox is a simple to install device that connects to your computer and allows you to hold, thanks to its great versatility, a video conference with any of the current existing platforms.

The freedom that ClassInTheBox gives you means that you can get up from your chair, change the volume of the headset without approaching the computer, change cameras with a single click, and prevent ambient noise from distracting those who are online.

Its wide range of use makes ClassInTheBox adaptable to whatever we need, such as only using the microphone, being able to use the camera change with a single click, incorporating the voice of the online participants in the class, making everyone's voice, including the teacher's, come out through the classroom audio system, or keeping all the chats private.

Multiple features found in this device, which is manufactured in Spain and has gained **national and international recognition**.

### Simple

Quick and easy setup, Click & Start.  
A single cable to connect everything.

### Silence

Advanced ambient noise cancellation, no echo, no interference. Sound controlled from the microphone.

### Air

High resolution wide angle camera (2K).  
One-click camera switching.  
Forget about uncomfortable and static close-ups.

### Freedom

Portable, freedom of movement.  
Keep communicating as usual.

## Two extensions, multiple modes of use

To take full advantage of ClassInTheBox we have developed the CITB extensions. The conjunction of hardware and software expands the functionality of ClassInTheBox exponentially. The **Use Modes** that are incorporated into the use of CITB take videoconferencing to a higher level.

And as if all this were not enough, all the **Use Modes** can be activated by **Voice Commands**. Although you can still activate them by clicking on their corresponding icons, you no longer need to be in front of the computer. Voice commands are activated remotely, giving you **total freedom of movement**.

### Camera change

With this function, you can exchange the image to be displayed between the CITB cam and the front camera of your computer, or another connected camera.

### Show Mode

By connecting ClassInTheBox to an audio system or speakers, you can have your voice amplified, so that those present can hear you perfectly.

### Classroom Mode

Momentarily disable the CITB microphone, so that another microphone can pick up the voice of those present and communicate with those online.

### Duplo Mode

Share the image of your two cameras in split screen, or prioritize the CITB cam using the Mini Duplo mode. The frontal plane is still important.

### REC Mode

Record and share all your video conferences, with high image and sound quality. Offline access to content is essential for your contacts.

# National and international recognition

ClassInTheBox has been awarded **Best Technology Innovation** at the **European Techonology Awards 2021** and is a **finalist at the Bett Awards 2022** in the Hardware, AV, VR/AR, Robotics or Digital Device category.

It has also won several accolades at the **Globee® Awards**:

- **Gold** as the "Disruptive Company of the Year" in the Telecommunications section..
- **Gold** in the "Innovations in Unified Communications" category.
- **Bronze** in the category "Best Product of the Year to combat and reduce the impact of COVID-19".

Other awards and nominations:

- Finalists in the prestigious international **GESS AWARDS** competition as Innovative Product.
- Considered as one of the most innovative initiatives within the Digital Transformation sector by the **Actualidad Económica** de El Mundo publication.

All these awards endorse the quality of the patented product manufactured in Spain, and prove that ClassInTheBox is the perfect complement for your videoconferences in the new reality.
