

24/7 safety monitoring by a team of UK safeguarding specialists

Our team of specialists works with our AI to analyse flagged activity notifications—24 hours a day, 7 days a week. A thorough risk assessment of the student is performed, identifying concerning trends and patterns. When an alert is determined to be urgent, the 24 Team follows an escalation process to notify the school.

Features

24/7 analysis

When a flagged activity alert comes up, a thorough risk assessment is performed to identify patterns in a student's search history. Crucial signs of trouble can begin small, and commonly-overlooked clues can provide a valuable virtual map into a student's mental state.

Backed by Securly's At-Risk algorithm, students are assigned one of three tiers based on risk level as determined by their real-time digital footprint. As a student moves between tiers (ex: from low risk to medium risk), the 24 Team is alerted to the change in a student's risk level.

Integration with our other groundbreaking products

Pair 24 with Auditor, Filter, and Tipline for the most complete student safety solution on the market.

Escalation processes

Different levels of notifications and plans of action are in place for emergency situations, minimizing false alarms. Sometimes a student might just be curious about a concerning topic, while another might be desperately obsessed.

Action plans

When immediate action is needed, you will hear directly from one of our UK based analysts. They will give you full context into the student's activity so your staff can make a well-informed decision on what to do next.
