# About us

Have A Book is a Polish company based in the beautiful city of Gdynia. We have been present on the market since 1998 and in 2007 the label and brand Have A Book was born. Our main focus has always been top-quality design and production of books and all sorts of educational publications, both as paperbacks and as e-books and digital copies. We also create tools necessary for digitalizing books.

We are an interdisciplinary team of people with a lot of experience in publishing and digitalization businesses. Our graphic designers, DTP operators and IT specialists have produced hundreds of educational books making us a truly uniquely experienced company in this particular field. Their work has allowed us to create tools necessary for an effective creation of epub's and wide range of digital formats.

## Our competence

- **OUTSOURCING** of the publishing processes
- **GRAPHIC DESIGN** and **DTP TYPESETTING**
- **DIGITAL** cross devices publications
- **INTEGRATION** of the typesetting process of both traditional and digital publications
- **AUTOMATIZATION** of the typesetting process and preparation for print
- **LOGISTICS**

# Integration

We integrate the traditional Adobe-software based typesetting (DTP) with other processes based on IT systems.

# Automation

We automate text processing and graphic sources in the publishing processes.

# Digital publications

We create digital versions of publications originally prepared for the needs of the traditional printing. Thanks to our wide publishing knowledge and the usage of our original tools, we are able to transform publications which - until now - were considered to be too complicated and laborious to be processed in this way. Once the technical analysis of the source materials is done, we work out the tools optimizing the process. We increase productivity and lower the costs.

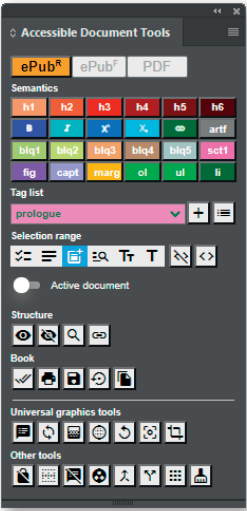

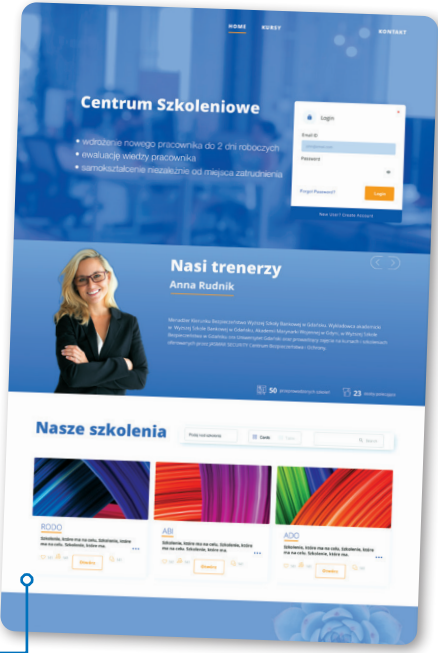

We transform the materials into the standards of:

EPUB

XML/JSON

HTML

We create tools used to generate non-standard formats on the basis of the technical documentation we are delivered.

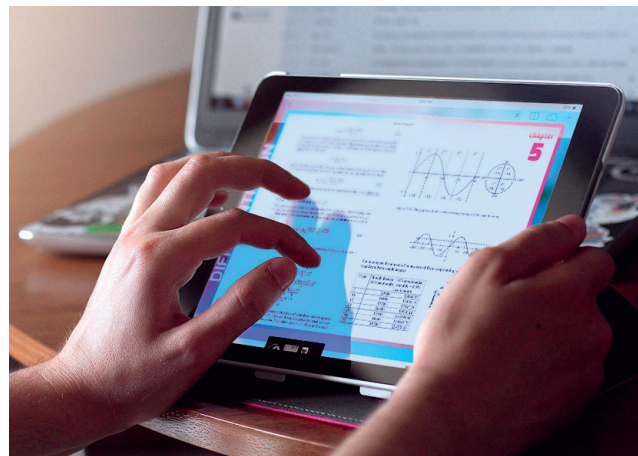

We can add structure and an accessibility layer to complex publications that were originally prepared for printing.

**With an individual approach to each client  
We will find the best solution to your problem.**

if your publications contain complicated elements that could not beprocessed manually, our IT department is able to create dedicated tools that will convert all data (e.g. mathematical formulas, tables, graphics, marginalia).

**We have specialists in electronic publications  
and software developers creating software  
dedicated specially to this type of publishing.**

We can add interactive elements to your ePubs and additions not present in the original.

## Our clients

### DTP

Our ambition is to accumulate and combine what's best in both worlds of publishing: the traditional one and the progressive one.

- BOOK DESIGN
- TYPESETTING
- COVER DESIGN
- ILLUSTRATIONS AND GRAPHS
- IMAGE PROCESSING

We can perform all of these activities for one book or concentrate only on one element for the customer.
