Subject: Information Technology
for 2022

A little about us

We're VeryPC and we manufacture computers and customise IT solutions for the education sector across the UK. Everything we do at VeryPC is customisable to suit specific customer requirements: PC configuration, software imaging, product branding, delivery, and installation. We partner with top IT vendors to deliver you durable, performance-driven technology intended to help boost learning outcomes and contribute to an improved Ofsted rating.

We've been building computers and providing IT services since 2004, growing from a small IT shop to an ever-expanding team of more than 30, working from 4,000 square feet of warehouse space. Our success has been through paying attention to our customer's needs and supporting them after the deals are done. We want customers to come back and forge lifetime working relationships based on trust. We've always been a family - these days it's just a little bigger.

When you join VeryPC as a customer, partner, or teammate, you're becoming part of our family.

We pride ourselves on giving you, our customers, exactly what you want. Our sales specialists have tons of experience in putting together the perfect computers and all of our own VeryPC devices are built in-house to your requirements. We like to use the phrase "nothing is standard" and we really do mean it.

We build a wide range of hardware that includes: desktop PCs for the classroom, laptops, All-in-One PCs, signage and media players, and high-performance workstations and gaming PCs for Esports. All of our VeryPC hardware is covered by our range of warranties and serviced right here on-site at our factory in Sheffield.

VeryPC for Education

We have seen first-hand the difference technology can make to the learning environment. We want to help our customers improve outcomes by sharing our knowledge and experience of technology in education. With our expert recommendations, new hardware, and services, we can help improve the efficiency of your school, benefitting all involved, students and staff alike.

We'll go above and beyond what you'd normally expect from a supplier to make sure you get exactly what you need and deliver the best possible value. This is why we offer significant discounts to our education customers. We reduce our prices but don't compromise on quality, so you get as much value out of your budget as possible.

WE

EDUCATION

VeryPC educational discounts enable schools to maximise the impact of their IT budget. You'll be able to opt for higher-spec units or replace a greater quantity with each purchase. Whether you choose to future-proof or boost your refresh cycle, your staff will be more productive and your students will learn more smoothly with better-quality technology.

A successful educational IT solution can lead to greater student engagement, boost efficiency, reduce costs, and help deliver better learning outcomes. This generation's learners are our future educators, builders, healers, makers, protectors, traders, administrators, and leaders. They are the ones who will make the difference between progress and decline. Whatever we do to improve their education is worth the investment. Better outcomes ultimately lead to a better tomorrow for us all. When great educators, teaching practices, and technology come together, everyone benefits. With VeryPC, you're in safe hands and never have to worry.

Hardware Services

An array of extra services

Over the years we've become known for the phrase "nothing is standard" and that doesn't just apply to the inside of our machines, oh no. We want you to have the best experience possible, so we go above and beyond to ensure that's exactly what happens. The way we see it, it's our job to make your job a whole lot easier.

From the second you get in touch with us, no matter the product or service required, we'll be with you every step of the way. That's why we offer a whole host of additional services that will enhance the look and feel of your new IT equipment.

Branding

We've become famous for adding a splash of colour to your new PCs with our custom branding options, which have become popular with both staff and students. From the initial design, printing, and laminating to application on your new PCs, it's all done in-house at VeryPC with our design specialists.

With your school's branding on, it makes your PCs more yours. We've found that students treat their devices with more respect and are proud to be using them. You needn't worry about pesky students peeling them off either as the gradient of material is super strong and resistant to rips and tears. If a super-strong student comes along, don't worry - we'll ensure we send out some replacements for you. Not only do we take care of the inside of your PC, but we also look after the outside.

"Getting the branding was a real added bonus and has been so easy to sort out. I simply emailed across our branding guidelines, sat back and waited and within a few hours a mock-up was sent over that blew me away. I sent this to our Marketing Director who approved the idea straight away and said that the VeryPC team had interpreted our needs perfectly."

Tony Cartwright, Systems Manager, Evolve Trust

Asset tagging

We can asset tag your hardware for you using a series of sequential numbers you supply. We can use tags you supply to us or get the tags made for you - the choice is really yours.

This doesn't just apply to VeryPC hardware either. Even if you buy devices from leading brands through us, we'll still apply asset tags to those, too.

Deliver to desk

We want you to have a smooth and effortless journey with us. So from telling us your requirements, we don't stop until pupils are sat using their shiny new toys. If you need an extra pair of hands on the day when it comes to setting up your new PCs, then, honestly, don't be afraid to ask. You're the boss.

We'll get a member of our team on-site to help with unboxing, lugging things around, or even a full desk installation, which includes connecting everything together, any cable management required, and giving your machines a quick boot up to make sure everything is in order. We'll even take the packaging back with us.

Warranty

We're proud of the work that we do here at VeryPC and a great amount of care and attention goes into every product that leaves our factory, from meticulous construction through to being boxed and ready to ship. Annoyingly though, electronic components are not infallible and when a rare fault that we're responsible for happens, your inclusive VeryPC warranty ensures that your computer is either fixed or replaced at no extra cost to yourself. Our warranties range from a standard 1-year collect and return through to 5-year warranty options and our team is on hand to get the best warranty that works for your school. But if something's gone wrong, we'll do the hard work. That's a promise.

Flex

The flexible “All-in-One” desktop

If you're planning your next IT suite refresh, then look no further. The Flex is a low-cost desktop PC with the convenience of an All-in-One style PC.

Every Flex comes with a lockable cable shroud and compact stand feet for stably orienting your desktop in a slim mini-tower configuration.

The specifications of our Flex PCs are completely configurable. Our customisation experts will help you put together your system with the right components to deliver the functionality you require.

"We got in contact with VeryPC to refresh one of our ageing IT suites, they were prompt with a quote that fit our needs and, at a very competitive price. We chose the Flex PCs and with our school branding on the side, they look great!"

Dan Chan, IT Manager, Upper Shirley High School

Flexibility = adjustability

Flex is a slimline small form factor (SFF) PC with the capability to mount a VESA-compatible monitor using its optional bracket. The bracket not only saves desk space but is also adjustable in all directions. This versatile configuration provides complete adjustability for your display:

- Tilt back and forward
- Rotate from landscape to portrait
- Swiveled base on wheeled feet
- Adjust the height of the monitor up and down

Flex Mini

The right size, without compromise

Sometimes you need a straightforward, no fuss, compact desktop PC that just gets the job done. Step up, Flex Mini. Our plain but pleasing ultra-small form factor PC won't distract you with fancy design or extra features. What it will do is sit discreetly on your desktop, being a solid, reliable little PC that lets you get on with your work.

Flex Mini may be small, but comes packed with as much computing performance as you care to specify and has room for expansion with a low-profile graphics card slot too.

If you need to quickly kit out a classroom or office without overthinking it, pick Flex Mini and move on to the next decision.

Go the extra mile with Flex Mini

Flex Mini has the optional extra of a cable shroud, helping it be more secure and tidy by securing its cables and connectors so they aren't getting in the way.

Alongside this, much like its older brother, the Flex, the Flex Mini also has the optional extra of a mounting kit. This allows you to mount your monitors onto its small chassis, creating a tidier and more practical workspace.

You also have the power to choose either AMD or Intel processor options as Flex Mini works with both. We're here to talk through the options if you're unsure of which to opt for.

Flex Mini is durable. Whether on its own, with a cable shroud or mounting kit it won't let you down. Keep it simple with Flex Mini.

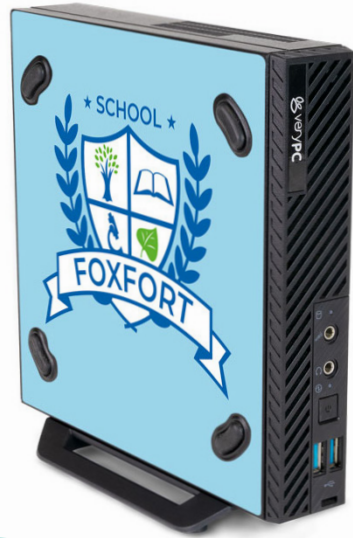

Flex Micro

The teeny tiny tidy little Flex Micro

Flex Micro is a 1-litre micro tower desktop PC that can be easily and conveniently mounted to any VESA-compatible monitor or display. Flex Micro has become a firm favourite with our education customers due to its size and performance.

Despite its slim 1-litre chassis, the Flex Micro can be configured with:

- CPU performance from Intel® Pentium® upto Core® i5
- VESA-mountable
- Lockable cable shroud
- Up to 5 years' Next Business Day Onsite Warranty
- Full colour durable vinyl skin

"veryPC offers an outstanding service to our Academy, all the way from procurement through to support. We use them for many of our hardware requirements such as Flex Micro PCs and we are impressed with their own branded hardware solutions. We really couldn't recommend them enough."

David Thorpe, ICT Technical Manager, St Ivo Academy

Practicality and security

Whether your Flex Micro is in desktop or mounted configuration, you can make use of its included cable shroud. It helps by tidying and securing the rear cables and connectors that often overwhelm a micro-form factor PC of this size.

The shroud can be secured with a single screw or a Kensington lock that extends through the shroud and also secures to the chassis itself for double security. The cable shroud is also removable if you prefer not to use it.

Western Digital.

BECAUSE IT'S MORE THAN A DRIVE. IT'S AN EXPERIENCE.

Western Digital SSDs—meeting customer needs with a complete portfolio

Our ultra-quick SSDs tackle any workload. These thoughtfully calibrated solutions range from our high-performance WD Black™ NVMe™ SSD for full-throttle gaming to our power performer, WD Blue™ SATA SSD, designed to meet the requirements of professionals and content creators to our WD Green™ SATA SSD, engineered for low power consumption. Our diverse portfolio makes it easy to customize solutions to meet the broad and ever-changing data demands of your customers.

Beam

Why choose All-in-One?

Beam is our All-in-One PC that's perfectly designed to allow your work to be completed with ease. With a clean and crisp display, Beam has two sizes for you to choose from. You can opt for a 23.8" or a 27" display, both Full HD.

The performance your staff and students need is all packed into Beam's minimalistic, clean-lined unit, which can be configured with the latest Intel® or AMD® processors, 32GB RAM, SSD or HDD and Windows® 10, 10 Pro or no OS.

To beam, or not to beam?

Plus, with its integrated webcam (and privacy cover), you'll be able to "zoom" into online meetings quickly and efficiently.

The VeryPC Beam is a firm favourite with our customers, as it's compact enough to save space in a busy working or learning environment but also lets you experience a natural All-in-One PC experience.

Beam also offers a sturdy tilt adjustable stand, integrated stereo speakers and a Kensington locking point for security.

Intel NUC

Save space and increase productivity

The Intel® NUC has become a firm favourite of ours over the years and particularly for our education customers because of its size and performance. With the latest 10th generation Intel® processors, it has all the performance you'd expect from a full-size desktop PC, except this is a computer that fits directly in the palm of your hand but isn't compromising on power or performance.

Intel® NUC mini computers have more connectivity than a lot of current laptops. Multiple front and back USB ports, HDMI, Thunderbolt™ 3 technology, a microSD slot, and Gigabit Ethernet gives you total flexibility.

They are also ready to run right out of the box and super-easy to operate. Connect your monitor, keyboard, mouse and headset and you're good to go.

Tidy workspace or monitor mounted

The true beauty of NUC is its size. It will occupy about the same amount of space on your desk as a mug but it even goes one step further with its included VESA mounting plate. This is perfect for schools as it reduces the risk of tampering and creates a clean and tidy workspace for your users to get on with their work.

We've also found that NUCs are perfect with a splash of our custom branding added on top that will reinforce your school's brand identity.

It might not have been built by us, but we'll certainly make it *your* device.

INTEL® NUC CHOOSE YOUR MINI.

Experience the range of Intel® NUC Mini PC advantages.

Thinbook

Sleek, stylish performance

The VeryPC Thinbook will be the easiest laptop buying decision you ever make. With its full HD 15.6" display, the Thinbook's screen displays crisp graphics and is fantastic for productivity.

Performance is no object, either, especially as it takes a socketed desktop CPU. Put simply, our Thinbook is able to provide you with the same level of power and performance that you'd expect to find in a desktop PC. All this comes packaged in a lightweight chassis with classy minimal lines.

"In terms of pricing and flexibility of a custom-built laptop, VeryPC wins my vote! With the price of their hardware and the amazing service provided by the VeryPC team, I'm looking forward to a long term relationship. I can't praise them enough. Price = amazing, service = amazing. What else do you want!"

Andy Field, IT Manager, The Bishop's Stortford High School

Cost effective performance

Kitted out with dual band Intel® AC wireless, Ethernet, USB 3.1, Bluetooth 5.2, card reader, plus VGA and HDMI video ports, connectivity will never be a barrier to your productivity.

All this comes packaged in a lightweight chassis with classy minimal lines, so even with its very reasonable price tag, the impact of your Thinbook is decidedly premium.

We're confident that with the VeryPC Thinbook you will never be short of the performance or connectivity you need when you are computing on the go.

Branded Devices

Devices from top brands

It might surprise you, but it's not just our own range of hardware that we supply to education. We work with a wide range of vendors to supply their laptops, mobile devices and desktop PCs to you.

Our ability to provide you with devices from brands such as Acer, ASUS, Dell, HP and Lenovo has seen our buying power increase, which in turn gives our sales team access to fantastic pricing.

It goes without saying, but you will still experience the same care and attention from us, no matter the brand of device you're buying.

Enhanced with VeryPC magic

Upgrade your device purchase with a selection of VeryPC customisations. You can, of course, opt to receive your products directly, untouched in their sealed boxes, but various special VeryPC services are also available to enhance your experience. These include custom branding, software image deployment, asset tagging and inventory management. An added benefit of your devices being customised at our factory is that we'll spot flaws and can have any faulty products replaced straight away.

"Having previously furnished us with a batch of Lenovo laptops, we again went with a Lenovo branded device. VeryPC were able to supply these more competitively than anyone else I approached, including some big name resellers, but were still able to offer us all of their usual extras, such as custom branding."

Andy Pacey, IT Manager, Boston High School

Chromebooks

Discover the power of Chromebooks with VeryPC

Chromebooks are taking the education market by storm and we've seen a huge increase in demand over recent years as schools discover the power of Google. This may come as a surprise to some of you, and we'd forgive you for thinking that we only sell our own VeryPC built devices, but if Chromebooks are your thing, then you're in the right place.

Whether it's taking the leap to become a "Google School" or you're just delving into the world of Chromebooks, then we're on hand to help. And as with most things here at VeryPC, we can add our own bit of magic on top, too. And as a Google for Education partner, you're in safe hands with us.

Benefits of Chrome

With more schools turning to ChromeOS, we've found that the simplicity of the operating system and overall ease of use is perfect for the education sector. There's no waiting for devices to boot up either as Chromebooks are ready to use within 8 seconds of being turned on.

From a technical aspect, ChromeOS is a light operating system where most of the "heavy lifting" is done through central computers in the cloud.

We've really cemented ourselves as a key Chromebook provider, and alongside our access to stock and competitive pricing, it's worth speaking to us and discovering all things Chrome.

Signage Players

Convert your big display into a digital signage screen

Provide a whole new way of displaying digital information in your school with our range of digital signage players. Throughout the COVID-19 pandemic, in particular, we've found that digital signage has successfully enabled schools to communicate guidelines to keep students and staff safe.

Our range of hardware platforms include OPS and SDM players, TV panels with WEBOS and our Mini PC range, which works with both Windows and Android operating systems. In no time at all, you'll be displaying digital content with ease.

OPS System

Open Pluggable Specification (OPS) is the industry standard for connecting computer devices to large flat panel/interactive display via a single universal internal slot. The VeryPC OPS System is powered by 10th generation Intel® Core™ CPU with i3, i5 and i7 options to choose from.

With no need for any cables, the VeryPC OPS System simply plugs into a single slot in the back of any OPS compatible display (both touch and non-touch), instantly converting your big screen into a giant All-in-One Windows® PC. Plus, with 4K compatibility, your content will never have looked better on a big screen.

SDM System

The Intel® Smart Display Module (more commonly referred to as SDM) provides a whole new way of displaying high-definition media and digital content. Its small design compliments the future of digital signage perfectly as it heads towards slimmer and lighter displays.

Optimised for digital signage, interactive displays, point-of-sale and more, the L640 provides a unique, sleek and powerful way of displaying your content with ease.

Signage Solution

Digital signage solutions designed for education

Our digital signage software solutions enable schools to coordinate, schedule and manage live announcements and display media content across multiple screens on campus. We are proud partners with TrilbyTV, a leading digital signage company whose software is designed by a team who understand and work in education. With over 30 years of experience in the industry, TrilbyTV's digital signage solutions are designed with the needs of teachers and students in mind.

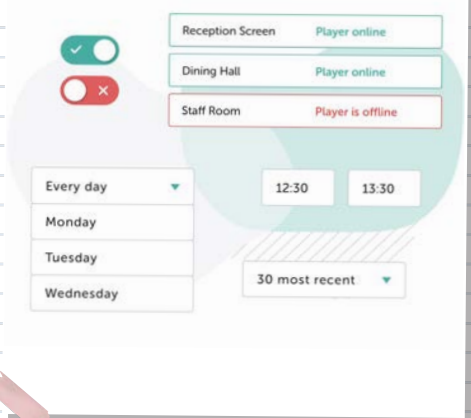

Their straightforward cloud-based software works on all common devices and is brimming with dynamic content including: IPTV streams, social media feeds, local weather, live announcements and Google Classroom integration. Whether it's digital menu boards in the canteen or information points in the library.

Saving time and effort, achieving the results you deserve...

TrilbyTV automatically refreshes screens with your latest content, keeping everyone in the loop. Last-minute change to assembly time? Broadcast announcements instantly with the Trilby TV Announce app, where you can send a message to all signage screens in just a few simple taps.

Numerous scheduling options are available, providing full control of what is shown, where and when. The Player Dashboard helps you monitor, and manage all your TrilbyTV players so you can control playback from anywhere.

Audio Visual

Big display, big experience

Flat-panel displays are now the de facto standard screen at the front of most classrooms, outperforming older interactive display technologies with a far superior user experience. Teachers and students can benefit from the latest technology and high-spec hardware features that are simply not available with projectors and boards.

An interactive flat-panel display gives you access to big, bright displays with rich vibrant colours, all presented in 4K Ultra HD. Touch technology is built right into the unit with up to 26 simultaneous touchpoints.

"VeryPC supplied and fitted an audio-visual solution for the school. The quality of installation, service and support provided was exceptional."

Artur Pawlowski, ICT Technician, King Edward Primary School

Professional installation service

We offer a full on-site installation service with a team of trained professionals, so you don't have to worry about doing any of the heavy lifting, mounting or cabling. We'll do the hard work and make sure everything is working perfectly. All you'll need to do is sit back and enjoy your new piece of kit.

It's also worth knowing that we can offer you evening and weekend installations to work around your busy schedules! Whether you're upgrading, replacing or buying for the first time, our team of AV specialists are on hand to help and we'll ensure everything is in place.

The digital tool to transform
anywhere learning.

Who is Lumio for?

Lumio is a digital classroom tool for those who are concerned about cost, but also want a software that saves time in creating lessons and reducing onboarding and professional development time. All packaged into an affordable all-in-one solution that works for more customers than competitors.

Simply works with what you have

Platform agnostic means that any device with a web connection can get access to powerful and engaging content. Playing well with others; be it Microsoft Teams, Google for Education, or whatever you already use.

Holds student attention

Lumio's web based content means that students can engage with whatever tool is in their hand. Heads down will now be a good thing.

Connected to what matters

Lumio is priced to be accessible to all. Lessons, and tools that save time, reduce costs, and boost outcomes. Consolidate district rollout and training, with the best choice for education software in your classrooms.

More flexible than the rest

Easily adds on to any sales you are already working on. Chromebooks, Apple, Windows, standalone. Everyone is on a level playing field.

Support Solutions

Be sure to utilise our expertise

It's not just the hardware side of things that we're good at. Without wanting to blow our own trumpet too much, we're pretty good at the support solutions side of things, too.

From our UK based helpdesk through to network security and IT infrastructures, our team of specialists will ensure you get the full VeryPC experience.

Helpdesk

We pride ourselves on having a team of friendly "techies" who have years of solving IT problems behind them in both the education and business sectors. Whether it's a fix over the phone, a remote fix or an on-site visit that's required, we'll get you and your device back up and running in no time at all.

We like to think of our team being your team. We can provide an additional layer of support for your on-site team or we can help you per hour or incident or options for long term monitoring and service agreements are also available.

Service that you can rely on

Whenever you contact us, you'll always find a helpful voice or set of typing fingers at the other end of the line, ready to tackle your problem and get you up and running again.

There's no such thing as a silly question when it comes to our helpdesk team, either. No matter your query, if you've bought a device from us, then it's our job to help. If an on-site visit is required, we'll send a technician to your school on a day of your choice, who will have all the parts and equipment needed to get the job done swiftly. Just stick the kettle on when we arrive!

Hardware

Infrastructure, by its nature, isn't a 'one size fits all' so, we take a consultative approach when discussing upgrades or replacements. We can run a diagnostic tool that tells you how your network is performing so that we can then suggest the appropriate hardware for your requirement.

You might be looking for a single server, storage, a cluster with server/SAN or more commonly now a Storage Spaces (S2D) setup and we can provide hardware from leading manufacturers including Dell, HP, SuperMicro and Intel.

If you're looking to replace an entire network, we can advise on switches, firewalls access points and cabling.

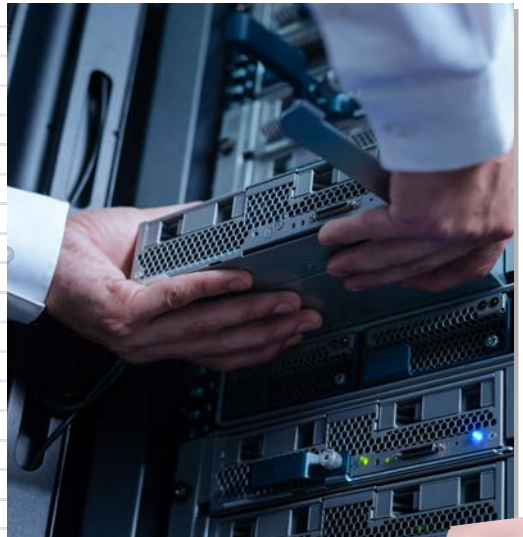

"Simply amazing! VeryPC implemented our Hyperv Cluster and everything arrived on site updated and configured for a hassle free installation. Amazing value for money!"

Andy Field, IT Manager, The Knights Templar School

Professional service

Getting the right hardware for the job is just the first part of the puzzle. What we really enjoy doing is helping you to get everything running - this can be preconfiguration at our production facility before shipping so you can get started quickly or we can come and install on-site.

We'll even migrate all your data from your old infrastructure to the new one if required. This can include both Hyper-V and VMWare environments. Our in-house team has years of experience under its belt and, though it can be complex, we'll work together so it makes perfect sense for you and your school's needs.

Microsoft 365

Discover Microsoft with VeryPC

Sourcing Microsoft 365 with us gives you a whole heap of added extras that you won't get anywhere else. This includes additional security, email continuity, mailbox backup and migration service. Our in-house specialists are fully clued up and no question is too difficult for them.

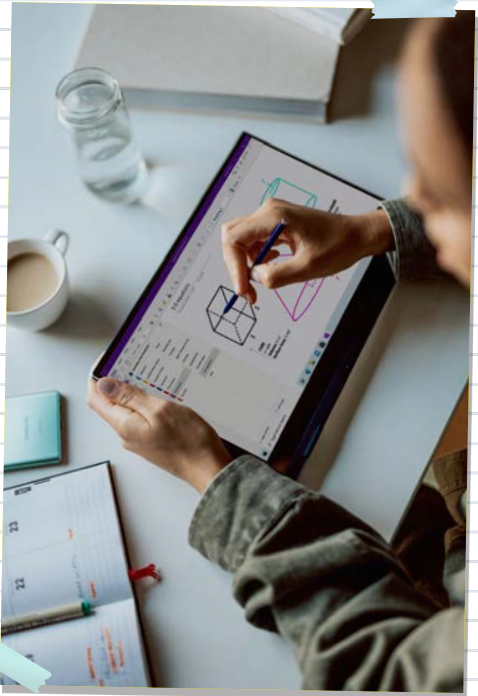

If you're not looking for an ongoing agreement, we're able to provide Open Volume Licensing and Perpetual Licensing, which is discounted for education customers alongside providing the hardware and licensing for Microsoft Teams Rooms. We'll make sure you get the most value for the best price possible.

Microsoft 365 Licensing

We don't need to tell you that applications such as Word, Excel, PowerPoint and Teams are essential tools for productivity within the education sector.

It's essential that you're getting the most from Microsoft 365 and all that it offers and that comes when you purchase your subscription directly through us. For example, when you purchase Microsoft 365 through VeryPC, you can pay by monthly direct debit rather than via a bank card that will eventually expire and cause disruption to your subscription.

You may also be able to save on the standard costs of Microsoft 365 with us. Savings are dependent upon circumstances such as the number of licences required and the agreement you enter into with Microsoft.

Added value via Microsoft partner

We're a proud Microsoft Named Partner, which has come from years of experience and knowledge. We get a ton of additional benefits that we then pass directly on to you and your school. The way we see it, that's only fair.

Gold
Microsoft Partner

Shape the Future

Get affordable devices with Microsoft's Shape the Future scheme

We're constantly surprised at how many schools aren't aware of the Shape the Future scheme, which allows schools to purchase devices with discounted Windows licences from Microsoft partners - that's us!

Any UK school with a valid UK school email address is eligible and these devices can be used by administrators, teachers and of course students. A key aspect of our Named Partner relationship with Microsoft is offering access to affordable devices to any qualifying primary or secondary school and that's something we're very proud of. If your school isn't taking advantage of the scheme, be sure to get in touch with us.

How does the process work?

It's a relatively simple process to get started with the Shape the Future scheme and should you encounter any issues, our team is on hand to run through the process with you.

All you need to do is verify your school email address and register for the programme by using the electronic form on the Microsoft website. By registering your school's eligibility, you'll then qualify to purchase discounted Windows licences from VeryPC.

We're even able to send you an email template to send directly to Microsoft, should you encounter any issues. We won't leave you stranded!

G Suite for Education

Empower learning while minimising the busywork

G Suite for Education helps teachers challenge their students with flexible, secure, and easy-to-use tools that are built for education.

Connect and collaborate effortlessly.

Build stronger connections between students and teachers – even outside of the classroom. Collaborate online in the same document, and engage students to think more critically.

Adapt and grow as needed.

Scale to meet the needs of every learner – from 10 students to 10,000. Our open APIs let you continually add value by connecting to different platforms or introducing third-party apps.

Get started quickly and easily.

With a single login, users can access all of their files on any device. Teachers can assign lessons and grade with a unified set of tools, while IT admins can manage it all from one centralised dashboard.

Protect and secure your data.

Google is committed to protecting teacher and student data. You own your data – we just keep it safe. Work is safeguarded, and users can be productive without distractions from advertising.

120+ million
students and teachers already

Google for Education Partner

We're delighted that VeryPC is a Google for Education Partner.

In short, this means that as an authorised reseller, we can provide you with education licensing for both Chrome Device Management and Google Workspace for Education Plus, all at special educational prices.

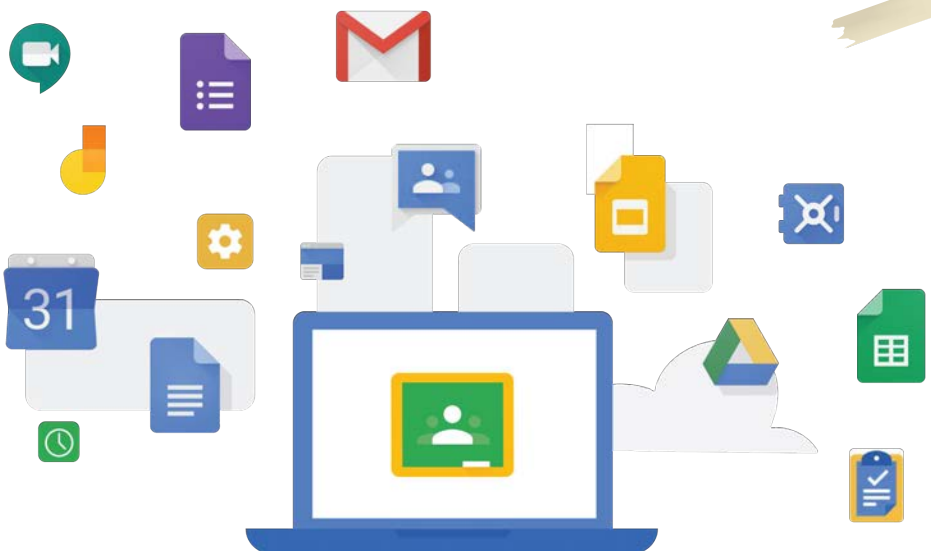

Chrome Device Management Licences

One of the joys of Chromebooks is being able to manage all your Chrome devices through one single console and that's where you'll need a Chrome Device Management Licence. A license is required for each individual device you own, however it lasts the entirety of said devices lifetime. An administrator is then able to configure settings, enforce policies, control user access, configure network access and much more.

G Suite Enterprise for Education

If you want to go one step further, then Google Workspace for Education Plus is effectively the "pimped up" version of Google Workspace for Education Fundamentals, with education very much still in mind and built into its core.

Google Workspace for Education Plus is a suite of tools that enhances the lives of your admins and takes collaboration to the next level with key features including: digital classrooms, 250 participants in a Google Meet, live streaming and attendance tracking.

IT Security

Mimecast Email Security

If we're talking to you about a specific product, then we're often using it in-house at VeryPC and that's the case with Mimecast, ensuring our emails are protected. Email security protects any cloud or on-premises email platform and is designed to act quickly to contain threats and reduce cyber risk. You'll be able to search for suspicious files and messages so they can be investigated if necessary. The work you're doing is important, so it's crucial that your school is protected.

Network and Endpoint Security

Threats to a school are an increasing problem, especially in a world where remote working now plays a bigger part in our lives. We partner with Sophos, who provide the world's best visibility, protection and response to help you detect and respond to threats on your network.

We're able to provide you with a comprehensive next-generation firewall solution that has specifically been built to expose hidden risks, block both known and unknown threats and automatically respond to incidents. This ensures your data is safe, secure and protected against threats that could otherwise leave you vulnerable and at risk.

Security Awareness Training

One click. That's all it takes to inflict serious technical and financial issues to your school and that's why we partner with KnowBe4.

You'll be able to train your users in a series of tests, phish them yourself and see the results to show ROI and provide further training if needed.

We can even set you up with a free trial, too, so be sure to get in touch if this sounds of interest and discover how you can protect your school.

VOIP Phone Systems

Take control of your phone system

We're talking to more schools than ever about VoIP (Voice over Internet Protocol) phone systems, which can remove the need for a traditional desk phone and can be used no matter where your users are working from. We've partnered up with 3CX, a leading VoIP provider of a system that can be run on premises or in the cloud.

With support for Windows and macOS devices, you're able to make, receive and transfer calls from your desktop using a simple headset. Here at VeryPC, we've been using 3CX in-house for over 12 years. If you've ever spoken to us on the phone then you'll have been speaking to us through the power of VoIP.

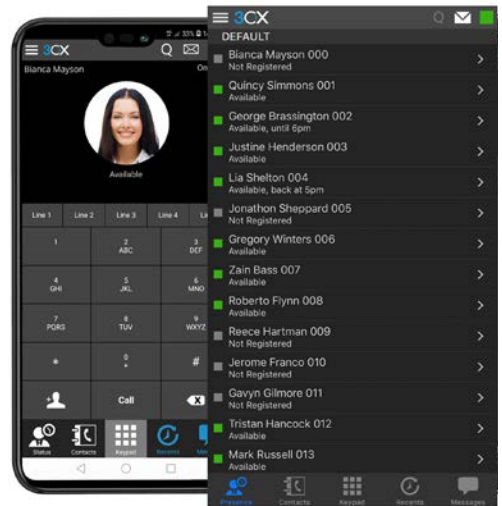

Stay connected, wherever you are

The real joy of VoIP and 3CX is constantly being connected, no matter where you're working from. Your internal extension can be used in school or remotely with easy-to-configure iOS and Android apps.

Alongside unlimited extensions for your users, call recording for training and compliance, voicemails direct to your email inbox and on average reducing phone bill costs by 80%, 3CX is the one solution for transforming your phone system.

Our in-house specialists will be able to walk you through the set-up process and ensure your users are staying connected, all through the power of VoIP.

VeryPC understands our IT requirements

Forging long-lasting relationships is essential for us here at VeryPC. We've long used the motto that when you buy from us, you're joining our ever-growing family. We want to be there for you every single step of the way and that's what we've been doing with the New Collaborative Learning Trust (NCLT) as they turned to VeryPC to provide its IT hardware across its colleges in Bradford, Doncaster and Pontefract.

New Collaborative Learning Trust – Learn. Succeed. Progress

The trust itself, founded in 2015, was created by the governors and senior leaders of New College Pontefract. They wanted to share their strengths and collaborate with others to improve the outcomes for young people.

New College Pontefract has recently been awarded Sixth Form College of the Year and Overall FE Provider at the 2020 TES Awards. Alongside this, New College Doncaster has been ranked the fourth-best sixth form college in the country for student achievement. Well done to all!

Across NCLT's three sites, you'll find a range of VeryPC devices that college students use on a daily basis including the VeryPC Thinbook, our Flex Micro desktop PCs and our All-in-One PCs.

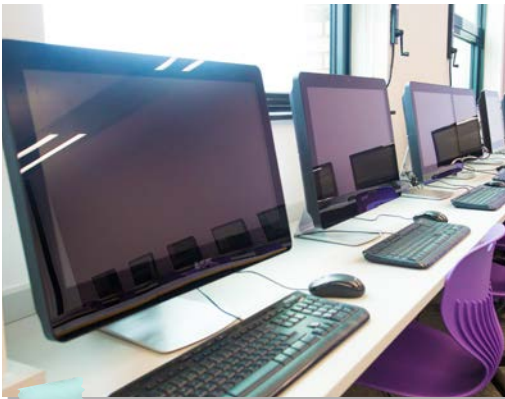

It's not just our range of VeryPC devices that the trust comes to us for either. Over the course of our relationship with NCLT we've provided them with projectors, monitors, laptop trolleys, keyboards, mice, SSDs and even social distancing floor stickers. NCLT is able to pick up the phone to VeryPC and know we are here to support them.

Working with the team has allowed us to help its vision and strategy. Its colleges make a significant difference to the lives of young people and that means here at VeryPC, we're doing what we set out to achieve - educating for a better tomorrow.

In September 2019, the trust opened New College Bradford to the world. A completely new build, right in the heart of the city centre and we were once more set the task of providing them with their IT equipment. Finding out the needs and IT requirements gave us the opportunity to work our magic in true VeryPC style. With our IT proposal approved, we got to work on building the college's new machines. For several rooms within New College Bradford, we installed a significant number of our All-in-One PCs - which, as we're sure you can see from the photos, provide a clean and tidy solution while providing the power and performance that students will require.

"VeryPC has been with us every step of the way when it comes to implementing our visions for the trust. They take the time to listen to what we need, whether that's an IT suite refresh, peripherals or working with us on New College Bradford, which was our latest project. The team makes it seamless and nothing is too big of an ask. For our Bradford site, it was crucial the project was completed on time. With VeryPC's help, our IT infrastructure was in place ahead of schedule and we even had the help of our account manager on site to unbox our new PCs. We couldn't recommend VeryPC enough."

For us, it's simple. Our job is to make yours easier. We wanted the process of providing, delivering and installing the new devices to go as smoothly as possible. With a fair few rooms to kit out, our warehouse team ensured that it was easily identifiable as to where each machine needed to be located within the college. Whether that was a PC for individual offices, classrooms or technology suites, we packaged every box with a room number and location on for ease when it came to installation.

Technology is our business
