

Admin Dashboard

Content filtering for Chromebooks, iPads, Windows, and Android devices. In-school, hybrid, or fully-remote.

Scalable to thousands of devices

Cyberbullying and Self-harm detection across GSuite

Rich analytics per user, class & district

Teacher, Parent and Principal accounts management

Youtube content and channel filtering

Chrome Extension and PAC file based

Fully GSuite for education compliant

Pure cloud-based filtering

AI-assisted web content rating

Anti-theft and device management

Multi-OS filtering

Billions of rated websites

A district-wide solution

BMEE is a multi-layer cloud filtering system that allows IT admins to push geo-localized filtering policies to every device. Web filtering is enforced to every device according to policies made of web, Youtube, content, time access management and application filter profiles.

21st century digital learning brings a new paradigm where 1:1 classroom transforms the way teachers used to teach. BMEE is also a

Pure cloud-based web filtering for Chromebook, iPad, Windows and Android devices

On- and off-campus filtering with lost device recovery- Anti-theft™

Detailed analytics and student safety, including threat and cyberbullying detection alerts

Admin, Teacher, Parent and Delegate dashboard management

Google for Education partner

Microsoft partner

classroom management system that allows teachers to monitor every Chrome, Windows or Android screen in their class while at the same time collect analytics and enforce content.

BMEE offers Student Safety- an AI-powered tool that allows administrators, principals, and delegates to detect harmful behaviour on any student's Gsuite Gmail, Google Docs, Google

Drive and Youtube account. The Anti-theft feature lets you track the exact location and activity of a lost or stolen Chromebook, sends a screenshot and collects information to identify the user.

Admins, teachers, parents, and principals

Administrators as key actors in handling school's IT infrastructure now have the power to oversee every school Chromebook, iPad, Windows and Android device and deploy time- or location-specific filtering policies at any scale.

With the Admin dashboard, you can create lists that block

or allow defined URLs or web categories. BlocksI rates billions of websites and groups them in 79 categories to choose from. You can apply granular filters within Youtube and create policies for in and out of school or time of the day. Some of the filtering capabilities can be delegated to the parent through the Parent dashboard

and to the teachers through the Teacher dashboard. View detailed Analytics per student, class or per Organization unit for a certain time period and export a PDF report.

These insights are available to the principal on the Delegate dashboard as well and can help track the students' online presence and provide feedback on what works during class and what doesn't. Admins can set up alerts, triggered when inappropriate content is accessed.
