**CHEMICAL FREE & GOOD FOR BEES**

Are you looking for outstanding results in your garden, but want a natural, peat-free fertiliser?

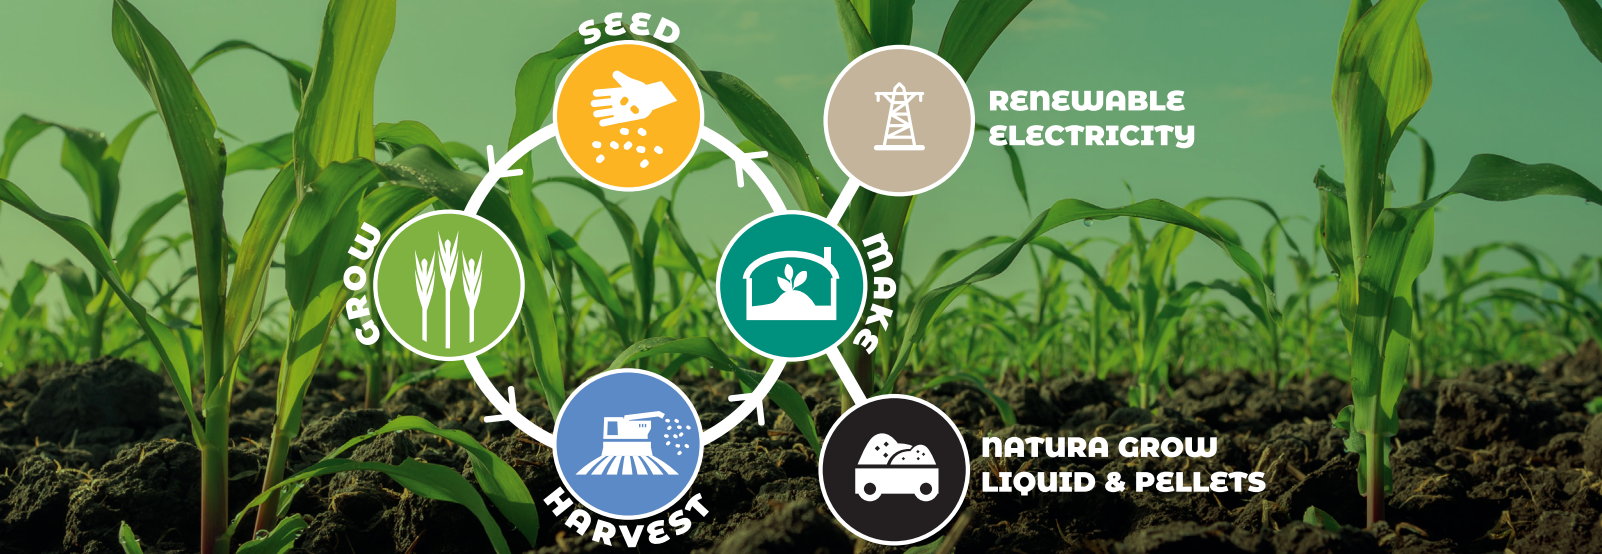

Natura Grow delivers a range of wholly sustainable products that are derived purely from plant residue.

Natura Grow is a by-product of our green energy production, and we achieve high organic and natural nutrition by utilising these plant residues and locking them into our unique pellet formula.

As our products are free from food and animal waste, keen gardeners can indulge their hobby with no detrimental impact to the environment.

We grow, harvest and process maize as an energy crop to make Natura Grow.

Our aim and our challenge is to deliver creative products that utilise every element of our feedstocks, replacing those traditional and non-sustainable products which deplete the natural resources of our planet.

Introducing our innovative Natura Grow All Purpose Feed Pellets – The fully sustainable alternative to peat-based composts.

At Natura Grow, we grow and harvest maize as an energy crop, converting the organic by-product from our anaerobic digestors into responsible and environmentally-friendly horticultural solutions.

We maintain our low carbon footprint through the growth, harvest and supply of green electricity to the National Grid.

**SAVE OUR PEAT... WE NEED TO ACT NOW!**  
Peat is a non-renewable resource and we must act before we lose this valuable ecosystem. Peat bogs are the most efficient terrestrial carbon sink on our planet; they cover just 3% of our land, yet store twice as much carbon as all our forests combined.\*
