

THE ORGANIC WAY TO CLEAN PATHS, PATIOS & MORE

Easy to use.
No rinsing!
No scrubbing!

Algon

ORGANIC

WORKS ON BRICK, STONE, WOOD, UPVC AND MORE!

FREQUENTLY ASKED QUESTIONS

Algon

ORGANIC

What is Algon suitable for use on?

Tarmac, flagstones, decking, conservatories (glass and plastic), slate & felt roofs, walls (painted and unpainted), fencing (wood & concrete), garden sheds, greenhouses, garden statues, plant pots, pebbles, garden furniture, canopies & fabrics, ponds, bird baths, ornamental water features*, astroturf & similar, all-weather tennis courts, access ramps, car parks, play areas & more.

When to apply?

Any time of year. Best in dry conditions.

How to apply?

For best results apply in dry conditions allowing the application enough time to dry before rain is expected.

For the concentrate: dilute 1 part Algon to 3 parts water and apply preferably with a garden sprayer set to deliver droplets. Alternatively a soft broom or paintbrush will do; a watering can is often wasteful. Wet the surface evenly spreading at approximately 5 to 6m² per litre as suggested below.

Algon will scorch grass, foliage and flowers where it makes contact. Nb. Excess wetting or puddling may result in small patches of white residue forming; this is harmless and will weather away. Non-metallic implements are recommended for application purposes; rinse implements after use. **Do not throw rinse water on grass or plants.**

What area will it cover?

2.5ltr container - 60m² approx

10ltr drum - 240m² approx

20ltr drum - 480m² approx.

Do I rinse it off later?

No, simply leave to allow the active ingredients time to work.

What are the results?

Algon will start to clear the surface within a week or so and stays active, cleaning progressively for months to come. Oil stains and grime will require alternative treatment.

How long will the treatment last?

Approximately 9 months to 1 year. This depends on the absorbency of the material being treated, its location and the weather conditions.

What about plants?

Algon will scorch grass, foliage and flowers where it makes contact; normal overspray or run-off falling on soil will not harm established roots but care should be taken to always keep this to a minimum.

Can I use Algon for water features?

Yes, if it does not contain fish/plants. Preferably rinse birdbaths after treatment.

Storage?

Algon has a shelf life of many years.

Can I paint over Algon?

Yes. Algon will not affect any type of paint or stain. Wait for the surface to clear for up to 10 days & proceed as per paint manufacturer's instructions.

Algon in diluted form is non-toxic and available in 2.5, 10 & 20ltr concentrate.

ALGONORGANICS.CO.UK

*A small amount of Algon entering pond water will not harm fish or plant life but care should be taken to keep run-off to a minimum when working around ponds. **Caution:** Algon is not recommended for use on marble, unpainted steel and galvanised surfaces. May temporarily discolour lead. **Spot test colour paving flags. Spot test any material not listed.** Always read the label.
