Saving the planet, one garden at a time

BIOCHAR PRODUCT CATALOGUE

Our products

Biochar Biology Blend

A Soil Association Approved and FSC® certified substrate rejuvenator, which replenishes trace minerals and natural biology (fungi and bacteria) for the season ahead. Can be used when potting, planting out, or as a top dressing, also great for house plants. High in nutrients so a little goes a long way.

SIZE	SKU	Quantity / Pallet	Quantity / Outer Box	Barcode
1L	CGBB1	540	6	5060221010238
4L	CGBB4	200	4	5060221010344

Biochar Compost Rejuvenator

Breathes life into 'spent compost.' Both the original healthy soil microbiome and nutrients are exhausted after a productive growing season. By adding Carbon Gold Compost Rejuvenator which includes added organic fertiliser the substrate can quickly get up and running again.

1L	CGCR1	540	6	5060221010535

Biochar Fertiliser

Soil Association Approved for organic growing, our plant derived fertiliser offers superb results with no synthetic or GM additives. Made with biochar, 5-5-5 NPK and other essential nutrients giving plants a natural boost.

SIZE	SKU	Quantity / Pallet	Quantity / Outer Box	Barcode
500g	CGFT1	540	6	5060221010245
2kg	CGFT4	200	4	5060221010368

Biochar Houseplant Booster

Specially created to support healthier growth in most indoor plants, including cacti.

Due to its wonderful water-holding capacity, the biochar will help avoid your house plants drying out. Biochar also supports a healthy soil microbiome and better airflow through the houseplant soil, ensuring resilient root development and better drainage – delivering a healthier plant that will flourish in indoor conditions.

Biochar Lawn Improver

Perfect whether you are planning to give your existing lawn a boost or as a base layer when laying new turf or seed. FSC® certified and Soil Association Approved for organic growing, it helps promote root development and reduces nutrient leaching.

SIZE	SKU	Quantity / Pallet	Quantity / Outer Box	Barcode
1L	CGLI1	540	6	5060221010252
4L	CGLI4	200	4	5060221010351

Biochar Soil Improver

Can be used as an additive to your compost or soil, or simply as a planting aid. FSC® certified and Soil Association Approved for organic growing, it promotes root development and improves soil structure to help encourage strong, healthy and productive plants.

SIZE	SKU	Quantity / Pallet	Quantity / Outer Box	Barcode

Biochar, the new oldest thing around

About us

Carbon Gold was founded by Craig Sams, founder of Green & Black's Chocolate, back in 2007 as an organic, peat free planting aid. Following incredible results from extensive third-party scientific trials looking into our enriched biochar's effect on plant health, our natural organic biochar products were quickly adopted by the commercial crop growing, tree care and sports turf sectors.

About our biochar

The earliest known use of biochar was by the pre-Columbian indigenous people of the Amazon over 2,000 years ago. Biochar is a high-carbon form of charcoal that is produced by heating organic matter at extremely high temperatures, and in the absence of oxygen, a process called "pyrolysis" and because of its purity it doesn't degrade so it is a permanent improvement to your soil.

By using Carbon Gold biochar, you can bring a physical and permanent change to your soil, improving structure, aeration, water-holding capacity, and nutrient retention. Biochar has a honeycomb structure that acts as a refuge for the beneficial microbiology which we add to improve plant health. This means that they do not get leached by rainfall and are permanently available to your plants when they need them. It also acts like a series of mini reservoirs retaining water so, even in times of drought, you don't have to water as often as would without the addition of our biochar.

Our products are 100% peat free and Soil Association Approved for organic growing although commonly used by both conventional and organic growers.

Biochar permanently locks carbon into the ground, rather than releasing harmful CO₂ into the atmosphere. So, not only can you make a permanent improvement to your soil health, but you are simultaneously improving your carbon footprint.

Good for your garden and good for our planet!
