## BUYING GUIDE

## POS

Catalogue, trade counter displays, slat wall POS and full Toolbar solutions are all available with live working products.

Discuss you options with your local representative.

## About us

More and more of us are looking to make our homes and offices that bit smarter. But that doesn't have to mean complicated costly technology. For us it means taking the electrical products we use every day and improving them to make your home or office more comfortable, convenient, and secure.

Our products are designed to help you better manage day to day tasks in your home, office and garden with the minimum of fuss – just plug and play. Whether its app-controlled sockets that let you manage your household from afar, or Wi-Fi enabled LED lights for smarter illumination, Link2Home provides the simple and flexible solution you need.

**We strive to be  
the best in class  
provider of Smart  
Electrical products  
and solutions.**

## Easy Set Up

Set up is easy and possible in as little as 10 seconds using the below set up methods:

Our plugs and lamps incorporate both Wireless and BLE connectivity which means when you open the app the device will pop up without any button press needed. All you need to do is add and confirm your wireless password and the device is added.

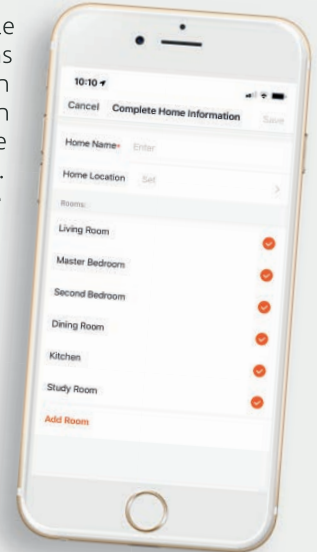

Using the manual mode (recommended) for video devices set up takes around 30 seconds with easy to follow on screen instructions.

You can use the Auto Scan feature to scan your network for new devices without manual intervention but note this set up mode can take up to 2 minutes.

## Home and member management

You can add multiple homes or locations under one user log in and switch between them easily on the app home screen. You can also share devices and whole homes with other users and control what devices and features they have access to.

Note: All users will require a Free Link2Home Pro app account.

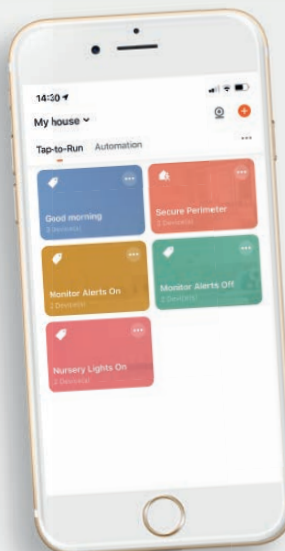

## Smart Control – “Tap to Run”

Using the “Tap-to-Run” settings from the “Smart” menu you can create quick one touch shortcuts to a series of events. These “Tap-to-Run” events are then added as a shortcut in your “Home” screen.

For Example:

You could create an event called “Good morning” in this event you can turn on your lights, boil your kettle and turn up your thermostat.

## Smart Control – “Automation”

Set up “Automation” tasks for individual devices or a group of devices are triggered external events. These events require no manual trigger and are triggered by external factors including:

Inter-device synchronisation: Activating one product feature when another product feature is activated. Such as turning on a light if camera motion is detected.

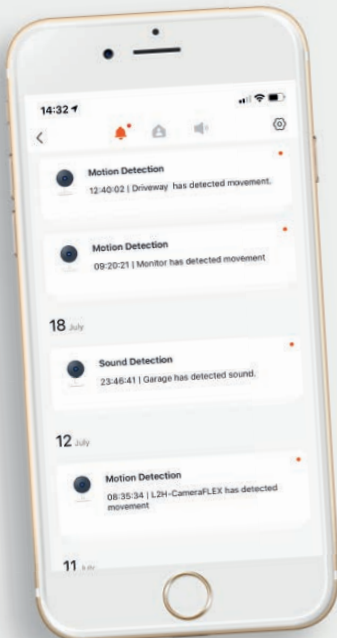

External environment: Split into two categories in weather and location.

Under weather changes you can link changes to temperature, humidity, weather, sunrise/sunset and windspeed.

Under location you can link changes to arriving or leaving a specific location.

Schedule: Set events to specific times on specific days.

For example: Set you outdoor lights to come on when you arrive within 500m of your home location and the sun has set.

## Alarm settings and event recording

All camera devices feature sound and motion detectors and when triggered the app will take a snapshot of the event which is then saved in the apps “Message Center”. You can also manually take snapshots and record video to your local device.

With all camera devices you can add a Micro SD card which will then record a 30 second video direct to the memory card when an alert is detected. These events can then be reviewed in the app’s “Message Center”.

Additionally, through the app you can subscribe to our cloud service\* to record events to the cloud which can then be reviewed in the app.

\*requires additional purchase.

**Link2Home Appliances**

Product Code	Product Description	RRP
L2H-SmartKettle	Link2Home Stainless Steel Wi-Fi Smart Kettle 1.7ltr 3000W	£ 91
