

KINDLING CRACKER®

SAFE. EASY. SMART.

**THE PERFECT WOOD SPLITTER FOR YOUR
WOOD BURNING STOVE AND FIREPLACE**

Hi,

We wanted to give you a chance to check out this brilliant new tool which makes splitting firewood safe and easy. We really think you'll like it! ♥

Many of us don't feel confident or safe using an axe. Balancing wood while trying to aim and swing a sharp axe blade close to your hands is not an easy task, nor is it always safe!

The Kindling Cracker was invented by New Zealander Ayla Hutchinson, who was a thirteen year old school girl when she came up with this wonderful product. Her Mum was splitting wood with an axe and injured herself badly, so Ayla was determined to find a safer alternative.

We think it is the perfect companion for your back garden log store and for safely creating kindling for your wood burning stove, firepit or pizza oven.

The Kindling Cracker is made from one solid piece of recycled cast iron in an Australian, zero emission foundry.

We really hope you enjoy using the Kindling Cracker. If you want to find out more, please do get in touch with us! You'll see our details below - and if you follow us on FB or Instagram you can see what we're up to. 😊

Warmest wishes,

Team Fandango
