

TIMBER GARDEN PRODUCTS
HANDMADE IN LANCASHIRE

A scenic landscape of rolling green hills and fields in Lancashire, viewed from a forested hillside. The foreground is dominated by dark, dense evergreen trees. In the middle ground, there are vibrant green fields separated by stone walls, with a few small buildings visible. The background features a large, rounded green hill under a cloudy sky. The text is overlaid on the bottom left of the image.

ALL OF OUR TIMBER PRODUCTS ARE
HANDMADE IN THE HEART OF LANCASHIRE

WE ARE THE ORIGINAL WHEELIE BIN & RECYCLE BOX STORE MANUFACTURER

The Garden Village designed, developed and manufactured the very first wheelie bin storage unit in the UK. We continue to lead the industry as the UK's first wheelie bin and recycle box storage supplier.

Over the years we have increased our product range and continue to design and manufacture our very own collection of handcrafted garden products.

We offer the largest range of Wheelie Bin & Recycle Box Storage products throughout the UK.

WHY CHOOSE THE GARDEN VILLAGE

The Garden Village **brand** was **established** in 2009, however, our **roots** began in the Landscaping and Garden design sector. Our **passion** for garden design and landscaping projects led us to consider other ways of making your garden space more **appealing** to the eye, hiding away those unsightly objects that we all have.

We originally began **designing and developing** our products within a small workshop on a family run farm, where the wheelie bin store was first created, since then the business has expanded and we now operate from an established manufacturing facility in Lancashire, located just outside of the Ribble Valley.

We have taken inspiration for our product range from locations within the Ribble Valley, each product name has been **carefully** selected from the much-loved villages and hamlets within.

Our products are handmade by our team of highly skilled craftsmen. We ensure that we use only sustainable and expertly sourced pressure treated timber. This is chosen for its durability and natural beauty, able to blend into any garden or driveway.

The Garden Village has a dedicated team of professionals on hand to answer any questions or queries that you may have, including a customer service department and technical support team.

All of the timber we use is certified by the **Forest Stewardship Council (FSC®)**, a non-profit organisation promoting responsible management of the world's forests. Here at the Garden Village, we pride ourselves on being a member of this organisation.

- ✓ We are proud to be a British Manufacturer and guarantee all of our products are made by us, right here in Lancashire.
- ✓ We pride ourselves on being an FSC® Certification holder. Our timber is sourced from responsibly managed forests, ensuring not only the health of the planet but will also provide benefits to future generations.
- ✓ Our products are handmade by our highly skilled team of craftsman.
- ✓ Our Home Delivery service is easy for retailers to use. Once the order is placed we will liaise with the customer directly to arrange delivery, hassle free.
- ✓ Made with quality pressure treated timber.
- ✓ We select all of our timber based on its durability, as all of our products are built to withstand the harshest of elements.
- ✓ All of our products are backed by our 10 year anti-rot guarantee.
- ✓ All of our products are flat packed for easy assembly and include fixtures, fittings and instructions for installation.
- ✓ Our professional customer service team are on hand to assist with any questions or queries.

OUR PRODUCTS ARE HANDMADE BY OUR TEAM OF HIGHLY SKILLED CRAFTSMEN.

SUSTAINABILITY IS AT THE VERY HEART OF OUR BUSINESS

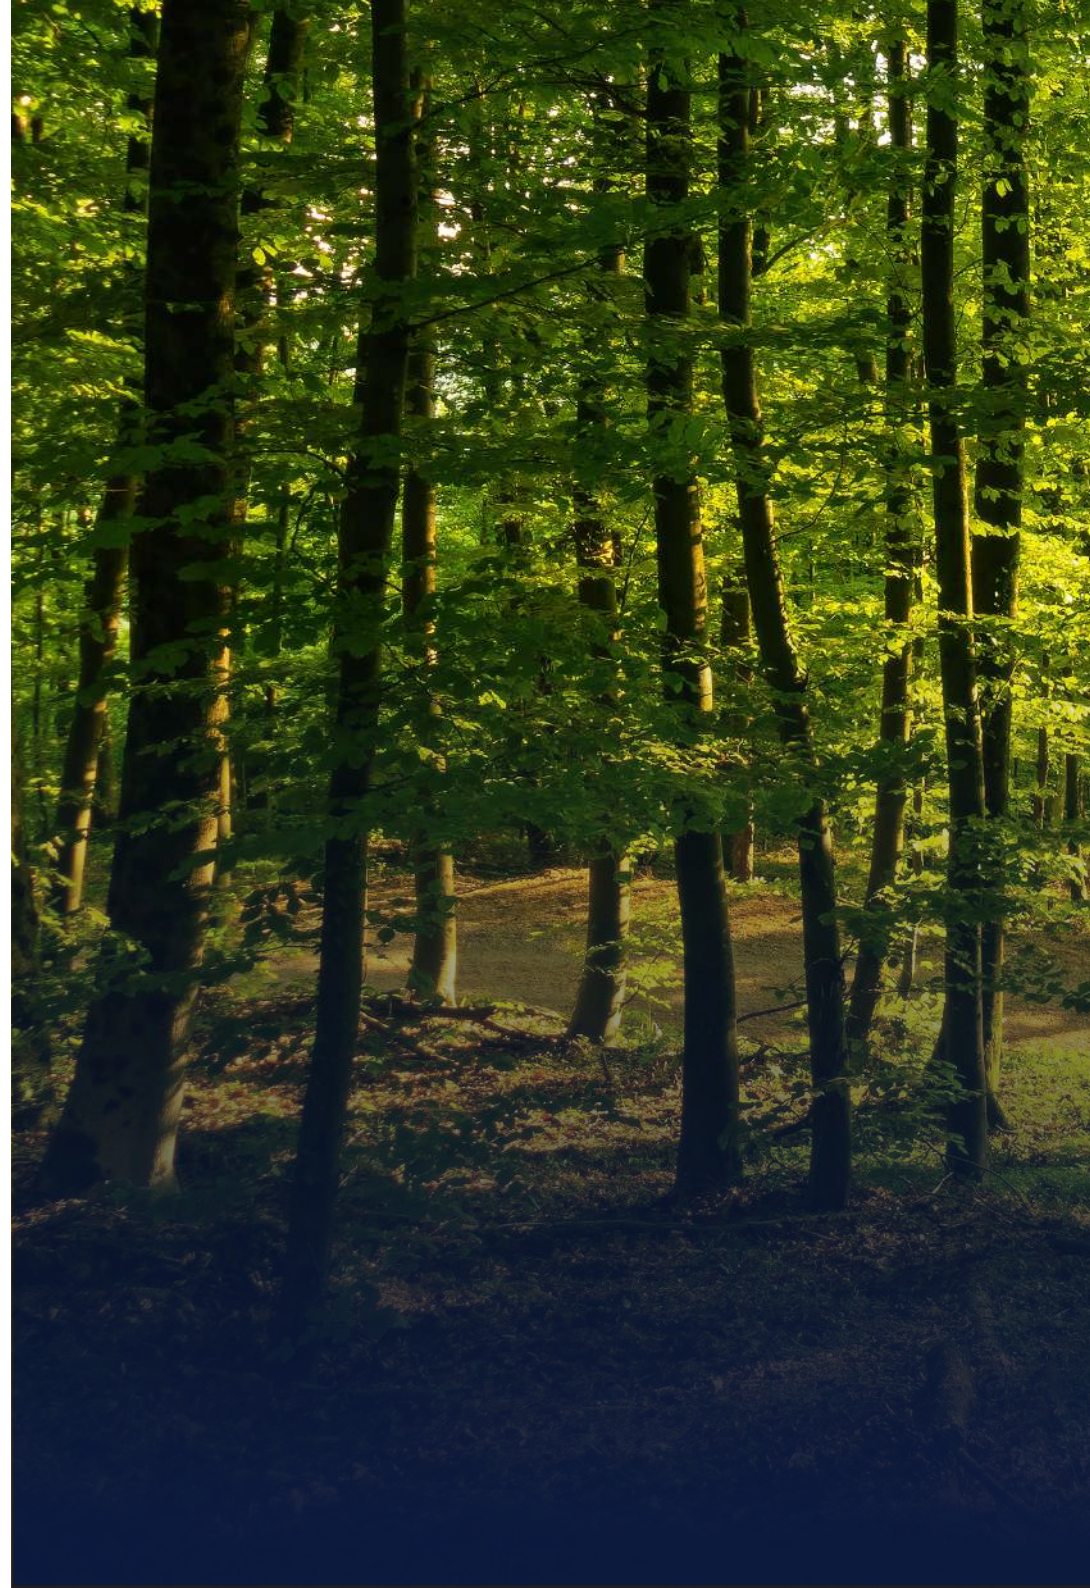

Here at the Garden Village we recognised that we now live in a world where human impact is a constant threat to our environment and biodiversity. We recognise that all of our operations have an impact on the environment, from the energy and resources we use, to the products we manufacture and the waste we generate. In order to combat climate change, we must be proactive, and therefore we, as a company, are extremely committed to high standards of environmental management. We undertake all of our activities with the aim of reducing the environmental impact of our operations, products and supply chain.

Our company is passionate about the environment and sustainability, therefore we always try where possible, to utilise local suppliers, in order to minimise the impact of transportation and maintain employment for the local people, thus also reducing emissions into the environment. Where possible, we also try to procure all of our raw materials in bulk, again helping to reduce road emissions and reducing our carbon footprint.

One of our main focuses is to reduce the amount of plastic packaging that we require to secure our products for delivery. Our intention is to ensure, that within the next 2 years, all of our packaging is 100% recyclable, as the company works towards carbon net zero.

As a proactive company, we actively source reconditioned pallets, to use for the delivery of your products. We would encourage our customers to always try to upcycle their pallets. Some great ideas could be to make funky and bespoke garden items, such as tables, swings, seats, or to simply convert the pallets into compost, mulch and fuel for your garden.

The Garden Village is proud to be a Forest Stewardship Council® (FSC) Certificate holder. Being an FSC® Certified company guarantees to our customers that all of our products have been manufactured from responsibly managed forests, ensuring the health of our planet for our future generations.

OUR TIMBER IS SOURCED FROM
RESPONSIBLY MANAGED FORESTS

WHEELIE BIN SIZE GUIDE

Use our handy wheelie bin size diagram to find out the exact dimensions of the most common UK household two-wheeled refuse bins. If you are ordering a bin store, we recommend physically measuring the bins and cross checking against this guide rather than relying solely on the litreage that may be written on the lids.

AFTERCARE & TREATMENTS

All of our products at the Garden Village have been carefully handcrafted by our team of highly skilled tradesmen. With all of the care and attention that we place into our products, we want to ensure that our customers get the most out of them.

Our products are manufactured from the highest quality of timber, however, as this is a natural product, it is often susceptible to changes in weather conditions. We often see this as the seasons change, for example, moving from winter into spring and from autumn back into winter. The changes in outside temperatures can cause the timber to react, in some cases expand or swell in the colder, wetter seasons and shrink or contract, in the warmer, dryer seasons. This is a natural process and will not affect the structure of your product.

PRESSURE TREATMENT

At the Garden Village we only use pressure treated timber which is the most effective method for safeguarding against water, fungal decay and insects. Timber that has been left untreated deteriorates at a much faster rate than timber that has been treated.

The process of preserving and protecting the timber includes placing the timber into a vacuum chamber which removes all of the moisture from the pores within. Once this process has been completed, the vacuum then forces chemical preservatives into the timber.

The timber then goes through a 'drying out' period, taking approximately six months. We recommend waiting to paint our products until after this time, which allows the core of the timber to reach its full strength.

PAINT AND FURTHER TREATMENT

Wood preservatives and treatments can add colour or shine to the surface of your product and can also protect against UV exposure, fungal decay, wear and tear.

The Garden Village have recently partnered with Protek, a family owned, UK manufacturing business, based in Somerset. As a result of our partnership, we now offer the Royal Exterior Superior Wood Finish, a hard-wearing, water repellent timber treatment offering all year-round weather protection, as well as mould inhibitor which protects the coating.

Preparation is the key to a great result and to ensure that all of our customers get the best results we have an easy step by step guide for you to follow:

Step 1

Ensure that the timber is clean and fully dry.

Step 2

If the treated timber is cut, notched or drilled it is recommended that an effective cut end treatment is applied, failure to do so may reduce the effectiveness of the pressure treatment.

Step 3

Apply 2 – 3 coats of the Royal Exterior Superior Wood Finish using a brush, roller or low-pressure spray gun. Allow approximately 2-4 hours before applying the 2nd coat, if conditions are clear and dry. Drying time will be far longer in colder conditions.
