AS RECOMMENDED BY...

KATIE RUSHWORTH

GARDENER, GARDEN DESIGNER, TV PRESENTER

PERFECT FOR GROWING....

Tomatoes, Cucumbers, Dahlias, Lilies, Fruit Trees and bushes, Cacti and Perennials and many more...

MAXIMUM GROWTH

Bronte MaxiPot ensures the important wet/dry cycle in your medium by the use of our innovative lift and twist design which lifts the pot from the base.

This means excellent air circulation under the pot base allowing your root zone to access the fresh air for maximum root oxygenation.

MAXIMUM USES

Bronte MaxiPot allows excellent drainage and air circulation to your roots allowing them to flourish and thrive. This helps prevent root rot and the build-up of bad bacteria from excessive, moist compost in pots and trays caused by water runoff or over watering.

MAXIMUM PROTECTION

In the winter when the frost creeps in, you can leave your pot in the up position lowering the risk of severe frost damage.

Leaving **Bronte MaxiPot** in the 'up' position with water in the tray, will protect your plant from crawling pests such as slugs, snails and vine weevil, as water prevents access to the pot.

HOW DOES IT WORK?

With a simple lift and twist action, the pot is raised onto a central column in the tray, allowing air to circulate beneath the pot and allowing water to drain. When the plant needs feeding simply reverse the action so the pot sits in the tray allowing the plants roots to be watered from the tray up.

The simple lift and twist motion helps prevent damage to the plant.
