

HEART OF EDEN<sup>®</sup>

At the heart of sustainable gardening

HEART of EDEN

All Purpose  
NATURAL COMPOST

absolutely no peat

- Encourages healthy growth
- Great start for plants
- An all-around plant food

**No peat...**

**not ever.**

No peat... not ever. No peat... not ever. No peat... not ever. No peat... not ever. No peat... not ever.

No peat... not ever. No peat... not ever. No peat... not ever. No peat... not ever. No peat... not ever.

**At Heart of Eden** gardening is our vocation, so we've made it **our mission** to ensure our **passion** and **business** only ever have a **positive impact** on the planet.

It's a **sad fact**: **Global depletion** of **peat** reserves and the **steady decline** of our soil health are major contributors to **world climate change**.

One way to **help** counter this is by using a **peat free** compost, leaving **vital peat bogs** untouched to do what they do best - **store carbon** (psst... which **positively negates** the effects of **climate change**).

No peat... not ever. No peat... not ever. No peat... not ever. No peat... not ever. No peat... not ever.

No peat... not ever. No peat... not ever. No peat... not ever. No peat... not ever. No peat... not ever.

Blended using **25 years' experience** in the horticultural industry.

High-performing, **natural compost.**

Made only from **sustainable, premium-quality ingredients.**

An **environmental all-rounder.**

Provides an **ideal habitat** in which plants can thrive.

All of our compost bags are made using **30% recycled materials** and are **100% recyclable.**

# Our compost...

Our blend is made from natural, nutrient-rich ingredients that work hard for you and the environment.

# What's IN ours?

## Mixed Coir

We blend our virgin coir with recycled coir, reclaimed from the soft fruit industry. We then compost and fine-blend the mix to provide a water-absorbent and sustainable compost base.

## Our own organic compost

Our organic green compost is sourced rurally and is rigorously monitored for quality at our dedicated production facility. It is then double-screened to give a soil-like consistency and another natural source of plant nutrients.

We manufacture all our own compost. We don't use third party suppliers so we can ensure consistent high quality is maintained.

## Fine Composted Bark

Screened to 0-10mm and matured for 6-8 weeks until it naturally starts to break down, giving plants a continuous source of nutritious nitrogen.

# What's NOT in ours...

Our compost is free from:

## NO Peat

This precious natural substance is most useful left in the ground, locking up carbon and reducing global warming. Peat can take millennia to form and we pledge never to use it in our compost, so it can continue doing its vital job for our planet.

## NO Raw material

This uncomposted raw steals nitrogen from soil around the roots and deprives plants of nutrition. It doesn't retain moisture, so more watering is required, and is often dyed with coal dust for appearance.

# Our promise...

We describe ourselves as being at the **heart** of **sustainable gardening** with good reason: peat bogs are crucial to the planet's health and we will **never** deplete this vital **resource** to make our compost.

Instead, we have used our expertise to develop a **natural compost** that is kind to the **environment**, crafted in the **UK** from **sustainable sources** and distributed nationwide by our dedicated team.

Our **peat free compost** allows **reduced watering** and promotes **healthy growth** without extra feeding, so you can expect your flora to flourish.

From indoor plants to hanging baskets and allotments, we are proud to provide customers with a compost that supports their needs as gardeners, whilst encouraging healthy soil that holds goodness and helps the environment.

We have a plethora of green credentials and a Planet Mark accreditation, so you can be confident you're selecting our compost with a clear conscience.
