Low Carbon Footprint, Frostproof Pots

Handcrafted by skilled artisans, these pots and planters bring style and beauty to any home and garden.

Made using a combination of advanced firing techniques and a unique clay blend, these pots carry a significantly lower carbon footprint than other imported products requiring international shipment.

SMITH & JENNINGS

Our Kitchen Planter is a smart practical flowerpot, with a generous rim for added strength. A very useful pot for the garden or conservatory, its volume allows for maximum growth and is ideal for most plants.

Flared Planter

An especially useful shape having a wide base and generous planting area. The distinctive lower banding lends emphasis to this strong and simple form.

This essentially practical pot, perfect for mixed planting; which along with its flared rim is easily relocated around a patio.

Bellied Planter

An elegant and classically good looking pot, the Bellied Planter provides plenty of space for the rootball whilst remaining robust and durable.

Also, if strikingly planted with rounded box trees, it has proven to be a popular choice situated in pairs on either side of an entrance way, door or along walks and terraces.

Pie Crust Planter

This Terracotta Planter provides plenty of space for the rootball. Whilst remaining robust and durable the unglazed finish allows the clay to breath naturally.

The Pie Crust decorative line has always been a traditional favourite with British potters, and is crafted while the pot is on the wheel with nimble movements of the finger as the wheel turns.

Yorkshire Flowerpots

Guaranteed Frostproof

Yorkshire Flowerpots

Yorkshire Flowerpots has a heritage firmly planted in over 130 years of clay manufacture, as part of the family-owned Naylor Group.

Yorkshire Flowerpots are produced using locally extracted clays and shales which are carefully blended and fired to a high temperature to produce a pot which meets the rigours of a British winter.

Due to the nature of the local clays used in our products, lime bloom and salts will occur as natural efflorescence, but this is not detrimental to the performance of the Yorkshire Flowerpots range.
