# YES to Sustainability

Although we are open to producing products from primary plastics, we are pleased to tell you that the vast majority of our products are made out of 100% recycled plastics! In fact, we have our own plastic recycling line:

2) The sorted materials are then crushed for the washing stage.

4) Washed pieces of plastic are melted into pellets from which new products can be made.

1) The supply of sorted secondary raw materials is granted due to our trusted partners.

3) The washing stage.

Subcontracting

Country: Lithuania

Sector of activity: finished or semi-finished plastic products.

Special equipment: plastic injection machines (forms from 300 t to 750 t). The extrusion line can produce products of various profiles. Raw material mixing and drying equipment. Packaging and palletizing equipment.

Worked materials: Polyethylen High-Density (PE-HD), Polyethylen Low-Density (PE-LD), Polypropylene (PP) and other plastics.

Application market: industrial subcontractors.

Products: specialization in products for garden and landscape, but open for other sectors as well.

What Do We Offer?

JSC Plastiva designs and manufactures finished or semi-finished products from both primary and secondary (recycled) plastics. We are capable of producing a variety of plastic products using **injection molding**, **extrusion**, or **blow-molded** technologies.

JSC Plastiva has the industry experience and skills to lead various projects, including:
- Purchasing raw materials and parts, including specialized parts or systems
- Producing technical and accurate plastic parts
- Assembling
- Packing and shipping final products for export

One of our greatest strengths is a non-standard approach to solving engineering and technical tasks, led by an openness to discussing and finding a way that works to meet each client's individual needs and requirements.
