THE MAGIC OF CAZADOR-DEL-SOL®

Thanks to its warm light and its gentle swaying in the wind the Cazador-del-sol® will bring harmony and sunshine into your life – whether the sun shines or not. Even on a dull day the suncatcher will turn invisible light into visible light. Each glance at the garden or at the balcony will bring a smile on your face, for light is nourishment for the soul.

In 2001 René Hildebrand visited the Canary Island of Lanzarote. The light and the barren, black volcanic landscape were a source of inspiration for the designer to create that magic object.

HOW DOES IT WORK?

- 1 Daylight strikes the suncatcher disc...
- 2 is concentrated there...
- 3 and glows bright at the edges – without electricity or any other source of energy.

The fluorescent Cazador-del-sol® transforms invisible UV rays into a warm visible light and thus glows all by itself – absolutely eco-friendly and energy-saving, without electricity or other energy sources. On a rainy day or at dusk we feel this effect even stronger. It is exactly when we miss sunshine most that the Cazador-del-sol® glows the most intense.

Mounted on a flexible rod the suncatcher reacts sensitively to the most gentle breeze and sways softly in the wind. The interplay of warm light and gentle motion create a feeling of peace and harmony.

The Suncatchers glow with exposure to (virtually any) light and the discs are UV protected.

A winter scene featuring a large tree with snow-covered branches on the left. In the foreground, a decorative light fixture with a glowing yellow ring and a snow-covered top is visible. The background shows a snowy field and a clear blue sky with some clouds. The text "all-weather resistant" is overlaid on a yellow circular background on the left side of the image.

The idea was given shape unintentionally.
The genuine pleasure and enthusiasm
people get from the Cazadores breathed
life into them, which is noticeable now...
