LET GROWMOOR HELP YOU MAKE YOUR GARDEN FLOURISH TO ITS FULL POTENTIAL!

CONSISTENT QUALITY

Growmoor is dedicated to providing high-quality products and services to enhance the growth and success of your garden.

With state-of-the-art production techniques and ISO 9001 quality assurance certification, you can trust that every product from Growmoor will be of consistent and exceptional quality.

THE ENVIRONMENT

For many thousands of years, peat has been used by humans for its ability to provide heat and power. It is still a rich natural resource, which rightly requires protection for future generations.

This protection is provided by formal regulation to which Growmoor fully subscribes. Our Irish peat bogs, which are non-designated sites of special scientific interest, are ethically and environmentally managed to support re-growth.

Our use of wood and bark fines, coir and other modern environmentally processed media are all being carefully assessed and the correct necessary fertiliser support added to ensure quality plant growth.

We look upon our company not just as a 'supplier' but more importantly, as a 'guardian' of natural resources. We take great care in managing these rich assets.

Multi Purpose Composts

Our range of Multi Purpose composts are specially formulated mixtures of high quality peat, base fertilizer and wetting agent giving an open texture for plant roots to establish while providing nutrients for a long lasting bloom.

In addition to our Growmoor Multi Purpose compost we also have a new formulation for our Moorland Multi Purpose and a peat reduced compost called Grolite. Our Grolite compost has the peat mix reduced by 50% to help your ecological footprint on climate change.

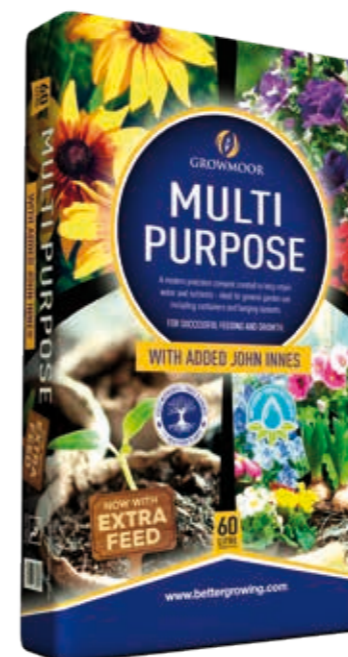

Multi Purpose Composts

Multi Purpose Compost

Our Multi Purpose is a specially formulated mixture of high quality peat, base fertilizer and wetting agent giving an open texture for plant roots to establish while providing nutrients for a long lasting bloom. Perfect for all plants except calcifuges (Acid Loving) such as Heathers, Hydrangeas, Leucothoe, Magnolia, Pernettya, Pieris, Rhododendron.

Multi Purpose Compost with added John Innes

Our Multi Purpose with John Innes has been comprised of a nutrient rich composition based on a traditional recipe of loam, peat and horticultural grit with added nutrients, by including loam it adds increased water retention and nutrients to plants in the compost. Our multi purpose with John Innes has a pH of 5.5-6.0 and added with a base fertiliser which creates an optimum medium for most plants to grow apart from calcifuges.

GroPlus Seaweed60 Compost

Our GroPlus Seaweed60 Compost is a unique mix of peat and perlite with seaweed added to the formula. Here at Growmoor we have used the highest quality of peat for its high water retention properties and density in organic matter. Seaweed is an important ingredient for our product as it is high in nitrogen and potash it stimulates seed germination and enhanced nutrient and water uptake.

Container & Basket Compost

Growmoor Container & Basket Compost is a peat blend with exceptional moisture retention which will result in longer flowering and vibrant blooms. This compost has a fine grade of peat to help with water retention and allows plants to anchor into hanging baskets and helps to prevent the waterlogging of roots.

EasyGro Potters Compost

Our EasyGro Potters (Magic) Compost is specially formulated keeping potted plants in mind. Our formula contains a peat based mix with added wetting agent and a controlled slow release fertiliser. The slow release of nutrients combined with the wetting agent gives a feeding time for around 6 months reducing the need to water plants that are in the medium.

Size	Per Pallet	Barcode

Ericaceous Compost

Our Ericaceous compost has been designed to create the perfect conditions for calcifuges (acid loving plants) such as Rhododendrons, Azaleas, Camellias, Berberis, Pieris, Hydrangea, Heathers, Magnolia, Skimmia, Conifers and Blueberries. Our Ericaceous compost has an acidic pH of 4.0 that is perfect for calcifuges and the lime free formula makes sure that it does not rise to an alkaline level.

GroPlus4 BURST Compost

GroPlus4 Burst has been specifically formulated to help produce outstanding results when planting into pots and baskets. The added seaweed benefits growth, the season long feed nourishes your plants and the active wetting gel helps retain moisture. Together these help to produce bigger, brighter flowers. It is enriched with seaweed to generate strong growth, and has a season long controlled release feed and an active wetting gel that combine to produce excellent 'blooming' results.

Rose, Tree & Shrub Compost

Growmoor's unique mix of premium sphagnum peat has been specially blended to support health and strengthen rose, trees and shrubs. Our peat mix contains enough organic matter to provide the rose, tree or shrub with enough essential nutrients to grow and flourish. Our rose, tree and shrub compost has an open-textured medium will make it easier when it comes to transplanting or relocating.

Peat Based Trial

Our Peat based trial was carried out over a 6 week period using our signature blend of Multi Purpose and Professional compost. For our trials, a range of Violas and Pansy seeds and plugs were used both on site and at a local nursery. These peat based composts were used as the comparison for our Peat Free products setting the highest quality standard that we strive to achieve throughout our entire range.

Multi Purpose Composts

Grolite Multi Purpose Compost

Our new Grolite reduced peat mix is made with responsibly sourced peat and peat free raw materials such as wood fibres to help your ecological footprint on climate change. Our new Grolite is made from high quality sphagnum peat which is perfect for water retention in soils giving a long lasting source of nutrients to growing plants.

Size	Per Pallet	Barcode
50L	80	5 031639 888788

MOORLAND Multi Purpose Compost

Our Moorland Multi Purpose compost has been formulated with base fertiliser, wetting agent and more in our sister branded bag. Full of all essential nutrients and an open texture for aeration provides most plants a superior growing medium at all stages of life. Perfect for all plants except calcifuges (Acid Loving) such as Heathers, Hydrangeas, Leucothoe, Magnolia, Pernettya, Pieris and Rhododendron.

Size	Per Pallet	Barcode
56L	90	5 031639 888467

Professional Compost

Our Professional mix is a blend of blond and brown peat with added base fertiliser to give a medium that is suited for professional growers and the normal household gardener. Made from sphagnum peat which contains a wide range of decayed matter which makes it a great soil amender for both potted plants and the garden.

“

Growmoor compost is the best we have ever stocked. Not one customer complaint with the quality! We use the Professional 80L to grow all of our annuals and vegetables. The quality is very consistent and we know what we are getting. We sell the Professional to our customers and they are very pleased with it! The Grolite 50% peat mix outsells its rival Jack's Magic by 10 to 1 due mainly to its price but also the quality.

The UK & Irelands, Worm Cast Experts!

By focusing on high-quality, peat-free, and organic products, we at Urban Wym can help the horticulture industry and the everyday gardener reduce their reliance on environmentally harmful growing media and fertiliser. Our high potency 'Worm Casts' can be blended or added to tired compost to provide a boost of micronutrients enhancing and elevating your plants.

Benefits include:

1. No need for feed
2. Packed full of micronutrients that last up to 1 year!
3. Superb water retention
4. Up to 8x larger yields
5. 100% Organic and sustainable

Available in

'Black Gold' Organic All Purpose Compost

The Growmoor Organic All Purpose compost has been enhanced with 30% Worm Casts produced by the UK's leading Worm Cast experts, Urban Wym. With improved water retention, increased yields and no need to feed, this new organic compost mix will be a superb addition to your garden.

Available in

Urban Wyrms Trial

Our new relationship with Urban Wyrms means we are able to supply a new Organic Peat Based and Peat Free compost (page 15), which contains 30% Urban Wyrms to our ever popular Multi Purpose Compost. During our trials - on site and outsourced, a range of Violas, Pansy seeds and plugs were used to evaluate the viability and positive effects that the addition of 10% worm cast would have on plant life. The trial images below show the results.

Specialist Composts

Our range of specially formulated products are ideal for a variety of uses, from soil conditioners to lawn dressing. Our specialist products will enhance the quality of your growing media to get the best results for your plants and vegetables.

Specialist Composts

Aquatic Compost

Our Aquatic compost has been formulated to support healthy development and production of all aquatic plants. Our Aquatic compost is made from a loam base with added fine grit and sand promoting strong roots and healthy lush foliage in the aquatic environment. This compost can be used for many types of aquatic plants, including marginal plants, oxygenators and waterlilies.

Size	Per Pallet	Barcode
20L	70	5 031639 888726

Bulb Fibre

Our Bulb Fibre has been formulated to provide as much nutrients to growing plants as possible. Here at Growmoor we have added charcoal to our recipe as it has numerous advantages such as decreasing nutrient leaching, improving the water holding capacity of the compost and the regulation of the pH levels.

Size	Per Pallet	Barcode
20L	175	5 031639 888702

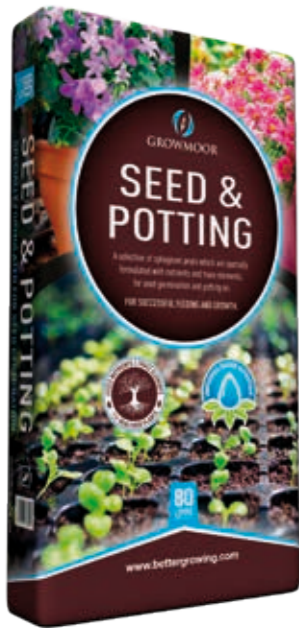

Seed & Cutting Compost

Our Growmoor Seed and Cutting compost is a unique blend of peat and vermiculite to give seedlings the best opportunity to germinate and grow in the early stages of life. The combination of vermiculite and our peat blend creates a first class medium for seedlings to grow and makes it easier when transplanting.

Size	Per Pallet	Barcode
20L	126	5 031639 888689

Seed & Potting Compost

Our Seed and Potting compost is a unique recipe that has been specially developed to ensure perfect growing conditions for young plants and seedlings in outdoor and indoor containers. At Growmoor we have made sure our seed and potting compost is a super fine grade to allow further water retention and to allow young plants to develop strong roots.

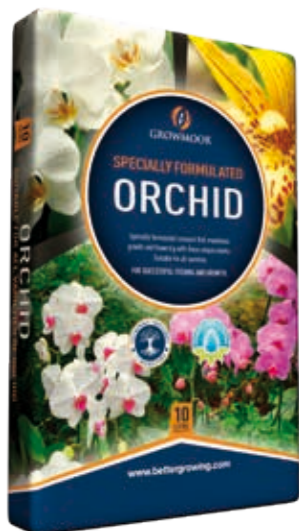

Size	Per Pallet	Barcode
80L	51	5 031639 888696

House Plant Compost

Our House Plant compost is primarily made from a rich blend of peat which accommodates most potted house plants. Our formula is specifically made for house plants as it is lightweight and blended to hold moisture reducing watering times and drains well to prevent waterlogging of roots.

Size	Per Pallet	Barcode
10L	120	5 031639 888610

Orchid Compost

Our Orchid compost is composed of a selection of peat, fine bark and perlite to promote fantastic aeration of the soil and unmatched water retention. Growmoors Orchid compost has a unique free draining structure which will enable healthy root growth and the addition of perlite allows better air flow without losing water.

John Innes Peat Based Composts

The John Innes compost range contains a rich mix of loam, peat and horticultural grit with added nutrients. It includes loam (topsoil) so peat use is reduced, making it a more environmentally friendly growing compost. John Innes formulations can maximise your growing opportunity, producing plants with particularly good root development.

John Innes Composts

John Innes SEED Compost

Our John Innes Seed compost is made from the 50 year old recipe of loam, peat and horticultural grit. John Innes Seed compost is a best seller for sowing seeds and seedlings as it provides a balanced nutrient supply, the loam based composition makes it easier to water and to re-wet it also acts as a store for water retention.

Bark & Soil Improvers

All of our bark is sourced from environmentally managed sites and are also deforestation free certified.

We supply a range of barks which can add that decorative element to your flower beds and rockeries whilst also helping to suppress weeds plus our soil conditioners can help re-invigorate your tired soils by adding much needed nutrients.

Bark & Soil Improvers

Chipped BARK

Our Chipped Bark is a perfect solution for a decorative and professional finish to your flower beds, rockeries, paths and play areas. Our product will not only deliver a visual effect with a grade size of (~15-22mm) and natural protection but will save time on weeding. The Chipped Bark will also help reduce the spread of fungal diseases on leaves that arises from rain splash. At Growmoor we make sure that all of our bark is sourced from environmentally managed sites.

Farmyard Manure

Growmoor's Farmyard Manure is a high fertile natural addition to any soil to support most species of plant growth. Our formula consists of a blend of peat, fine bark and mushroom casing giving a medium that is perfect for providing nutrients. Our Farmyard Manure is perfect for adding to existing soil and during planting for development and reinvigoration.

Lawn Dressing

Our Lawn Dressing is essential when repairing bare spots, hollows or even bumps in your lawn. This universal lawn dressing plays an important role in protecting lawns from thatch infestations. Growmoor's specially formulated product has a loam base which will increase moisture retention and aid to the breakdown of nutrients and aids grass growth.

Bark & Soil Improvers

Top Soil

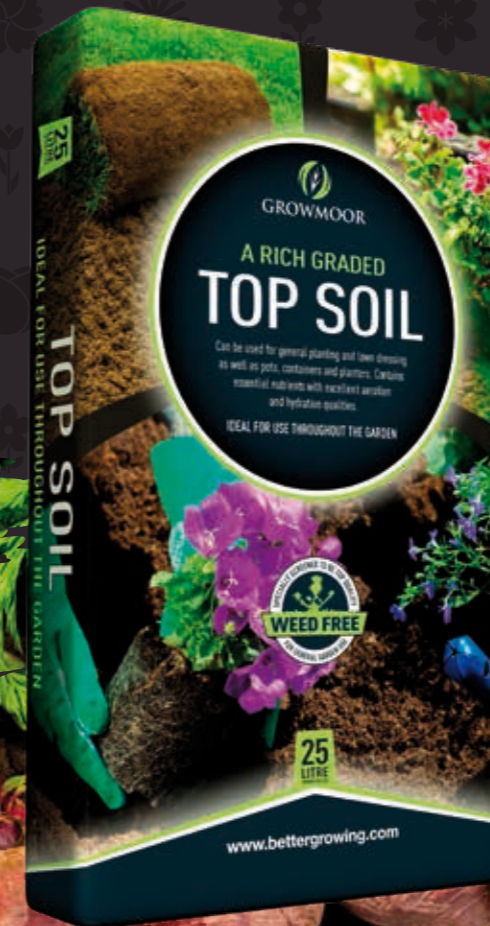

Growmoor high quality Top Soil is perfect for creating new beds and borders or to reinvigorate existing garden soils. Our Top Soil acts as a plentiful supply of organic matter improving the structural stability in all weather conditions and a pH level of 5.5-6.0 helping to regulate existing soil pH levels.

PLEASE NOTE:

Our 40L Farmyard Manure bag design, (shown here) has different colouring and imagery to the newer 50L bag design opposite.

Irish Moss Peat

At Growmoor we only use the highest quality of sphagnum moss peat, known for its water retention properties, stimulation of developing plant roots and the ability to add humus and organic matter to soils. Our Irish Moss Peat is available in a variety of grades as bulk or packaged product making it suitable for different uses around the garden.

Available in

Export & Promotional Products

We deliver throughout Europe and we can adapt our packaging to suit you and your customers. We can design your bag from scratch or simply adapt one of our current range by adding your logo and any language translations necessary. Our design team can cater to your needs. We're here to help!

The Right Components For The Perfect Mix

Growmoor has produced mixes for a range of specific needs, including Seedling Substrate and Potting mixes with varying characteristics including moisture content, ash content, blond and black peat, ph values and screen sizes to name a few.

Call today if you have a specific requirement for your substrate mix.

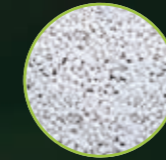

Available in

Professional Substrates

A selection of the raw materials used to create your custom mix.

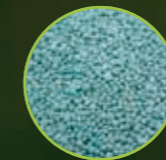

BASE FERTILISER

NPK fertiliser is used as our base fertiliser. This provides the primary nutrients of Nitrogen, Phosphorus and Potassium, which soils often lack but need, to create the ideal environment for optimal plant growth.

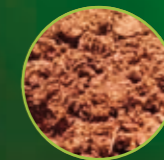

COIR

Otherwise known as 'Coconut Fibre', this biodegradable product can be used as a substitute for sphagnum (peat moss) and helps balance the air porosity and water retention.

CONTROLLED RELEASE FERTILISER (CRF)

An enriched fertiliser which degrades slowly in order to release its nutrients so that the growth stimulation of your plants is spread over a long period, usually between 3 and 5 months.

SPHAGNUM MOSS PEAT

A unique organic material that retains water, prevents compaction and can absorb up to 20 times its dry weight in water and nutrients and release it over a long period of time.

WOOD FIBRE

A sustainable and biodegradable product that helps reduce the need for chemicals. Can be tailored to the requirements of most plants as they have excellent drainage properties as well as a low pH.

PERLITE

An inert, porous and lightweight substance, these little white rocks offer excellent water retention and drainage capabilities. It will take on the acidity or alkalinity of the nutrient solution it is in.

BARK

Improves drainage and air porosity and helps develop strong rooting system. Various grades of bark can be used to create the ideal environment for the growers' particular plants.

VERMICULITE

Helps promote faster root growth, and helps stimulate the development of strong roots in young plants. Helps retain air, plant food and moisture, releasing them as the plants need them.

Testimonials

Growmoor are a great company to deal with, top quality grower product, knowledgeable reps and retail products that customers keep coming back for.

Andrew,
Sapcote/Sharnford Garden Centre,
Leicester

This was our second season with Growmoor building on an excellent first year of compost sales. We extended the range and have continued to develop a strong relationship with the team at Growmoor. We have been impressed with their quick turnaround of orders during peak trading periods and the feedback from customer on the Growmoor range has been fantastic.

Alan,
Sunnyside Garden Centre,
Ibstock

Our customers have been delighted with these products and we have only received positive comments. Most products are produced using high quality peats with the addition of fertilisers. Even the Peat Free compost have been viewed as significantly better than many of the Big-Name Brands. Great Products from a company that delivers the quality with care and punctuality.

Jason,
In Excess
Salisbury

Four years ago, we had not heard of Growmoor compost. We were persuaded by Cath, our area sales manager, to try a load. Since then, it has become our main brand for retail sales. Its consistent quality ensures repeat sales increasing each year alongside our bedding plants and perennials.

Gerald,
Pound Farm Shop,
Whaddon, Gloucester

The Growmoor Sales Team

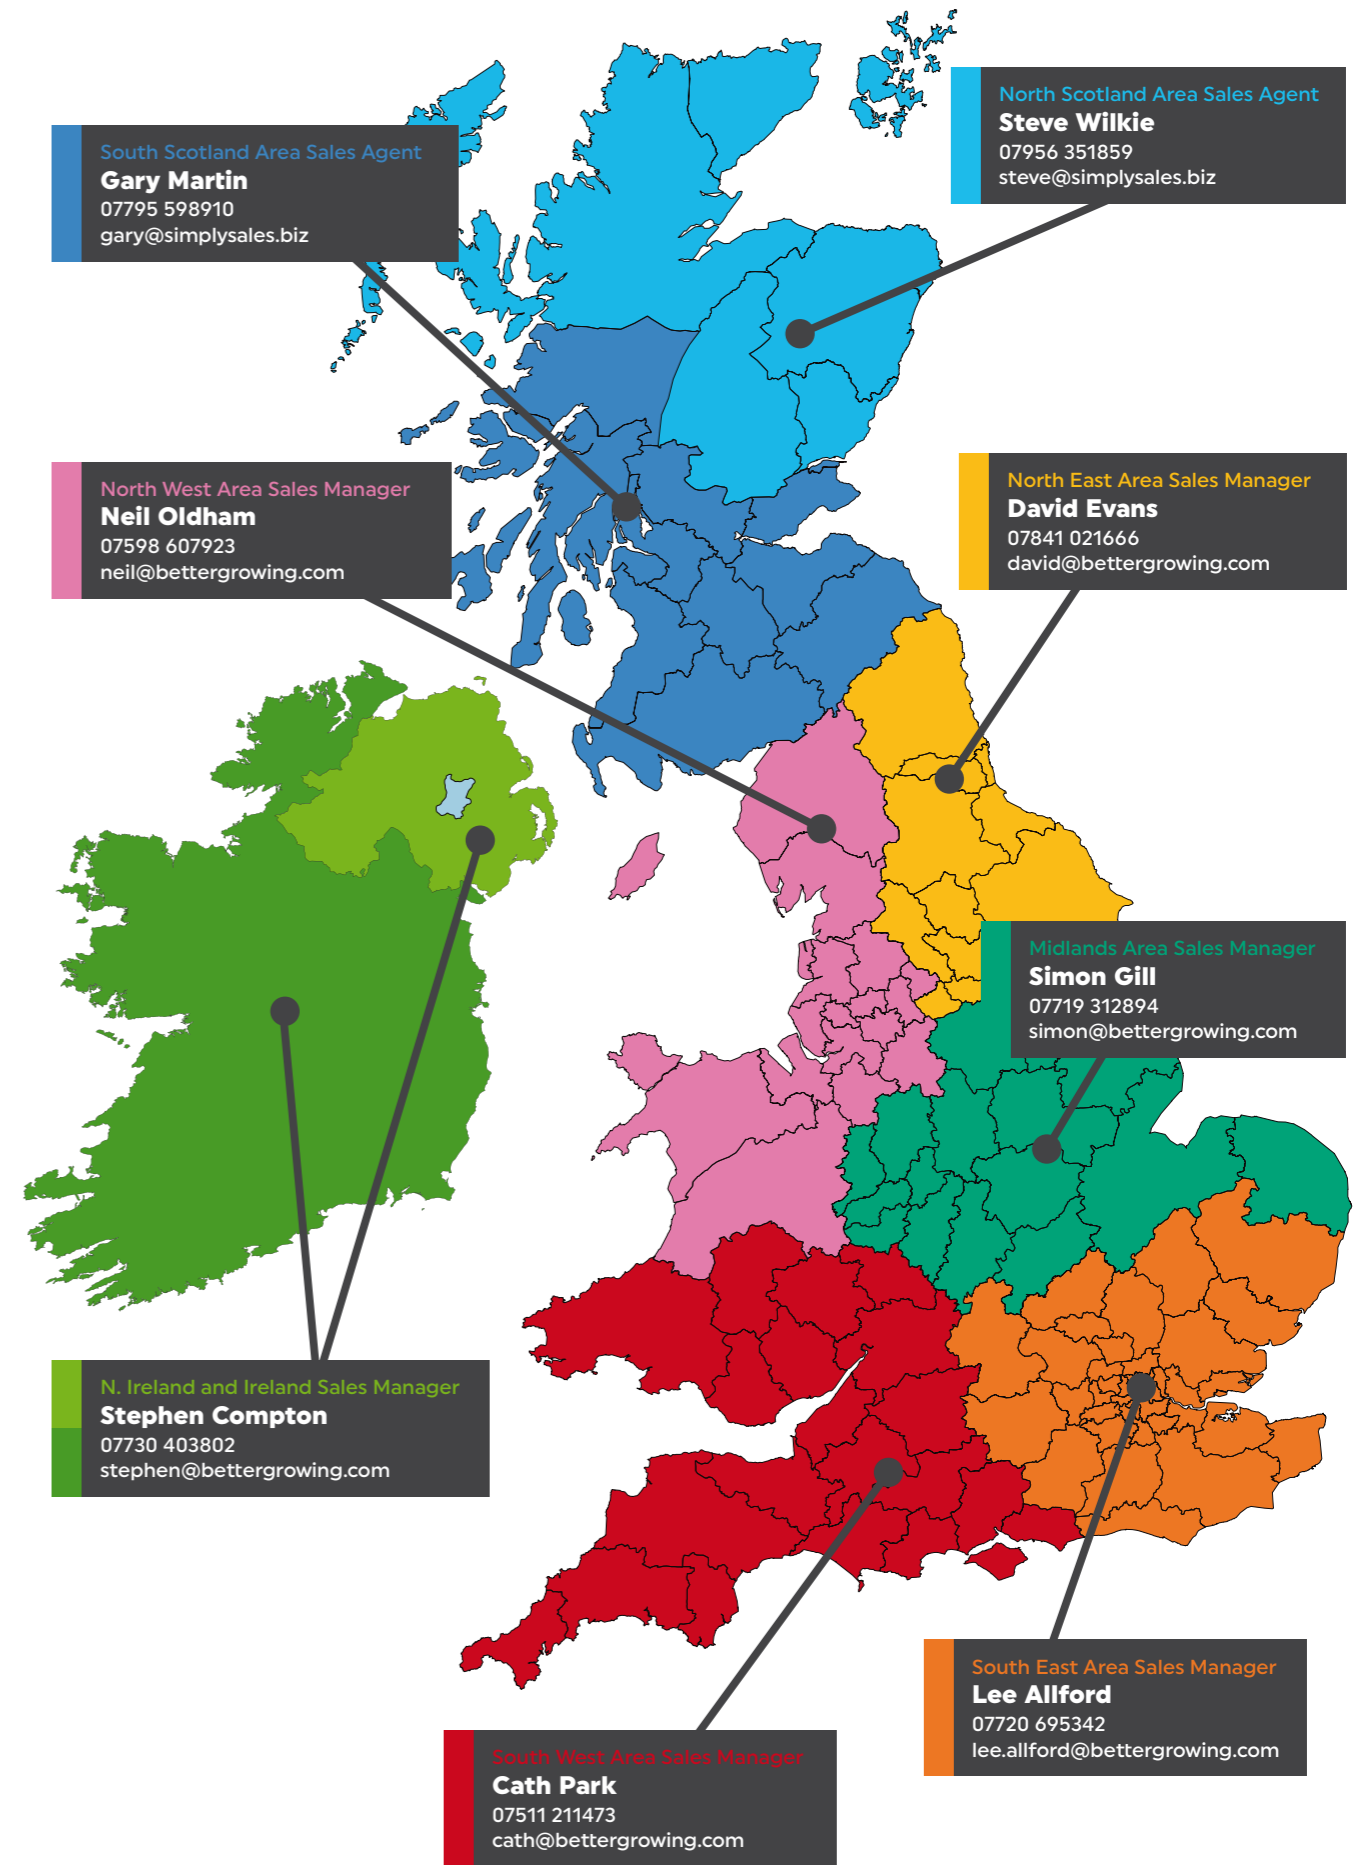

Growmoor can supply growing media to exact customer specifications in various grades of raw material, from 100% peat based to pure organic, no peat formulations.

If you have specific requirements or if you want our product in your own branded packaging, give one of our sales team a call today and look forward to better growing!
