furniture

After the success of our 2024 launch we are delighted to not only extend our best selling ranges but introduce a new collection delivering you with premium quality outdoor furniture at great value.

Available wholesale from Spring '25 as individual SKUs, sets and container loads, we'll be carrying limited stock aiming to deliver to order instead.

-  **Premium build quality & materials**
-  **Sold singularly, as sets and by the container load**
-  **Arriving to order Early Spring '25**

“  
**Customer need:**

I really want a garden set that looks and feels like top quality natural rattan but can be left outside for the summer and has comfortable cushions rather than the plasticky feel of polyester or scratchy feel of acrylic.”

Designed with style, durability and comfort in mind...

# Composition:

## HDPE Wicker

Used across all of our 5 brand-new ranges. It's the most realistic and hardwearing wicker on the market.

## Hardwood Feet

Featuring hard wood, eco-friendly acacia wood feet. Known for its rapid growth & long-lasting durability, acacia ensures years of use

## Olefin Fabric

Designed for outdoor use, it's the perfect mix of resilience, comfort, colourfastness, stain-resistance and durability.

## Powder coated aluminium frames

Rust-resistant aluminium frames, powder coated for even greater protection from corrosion.

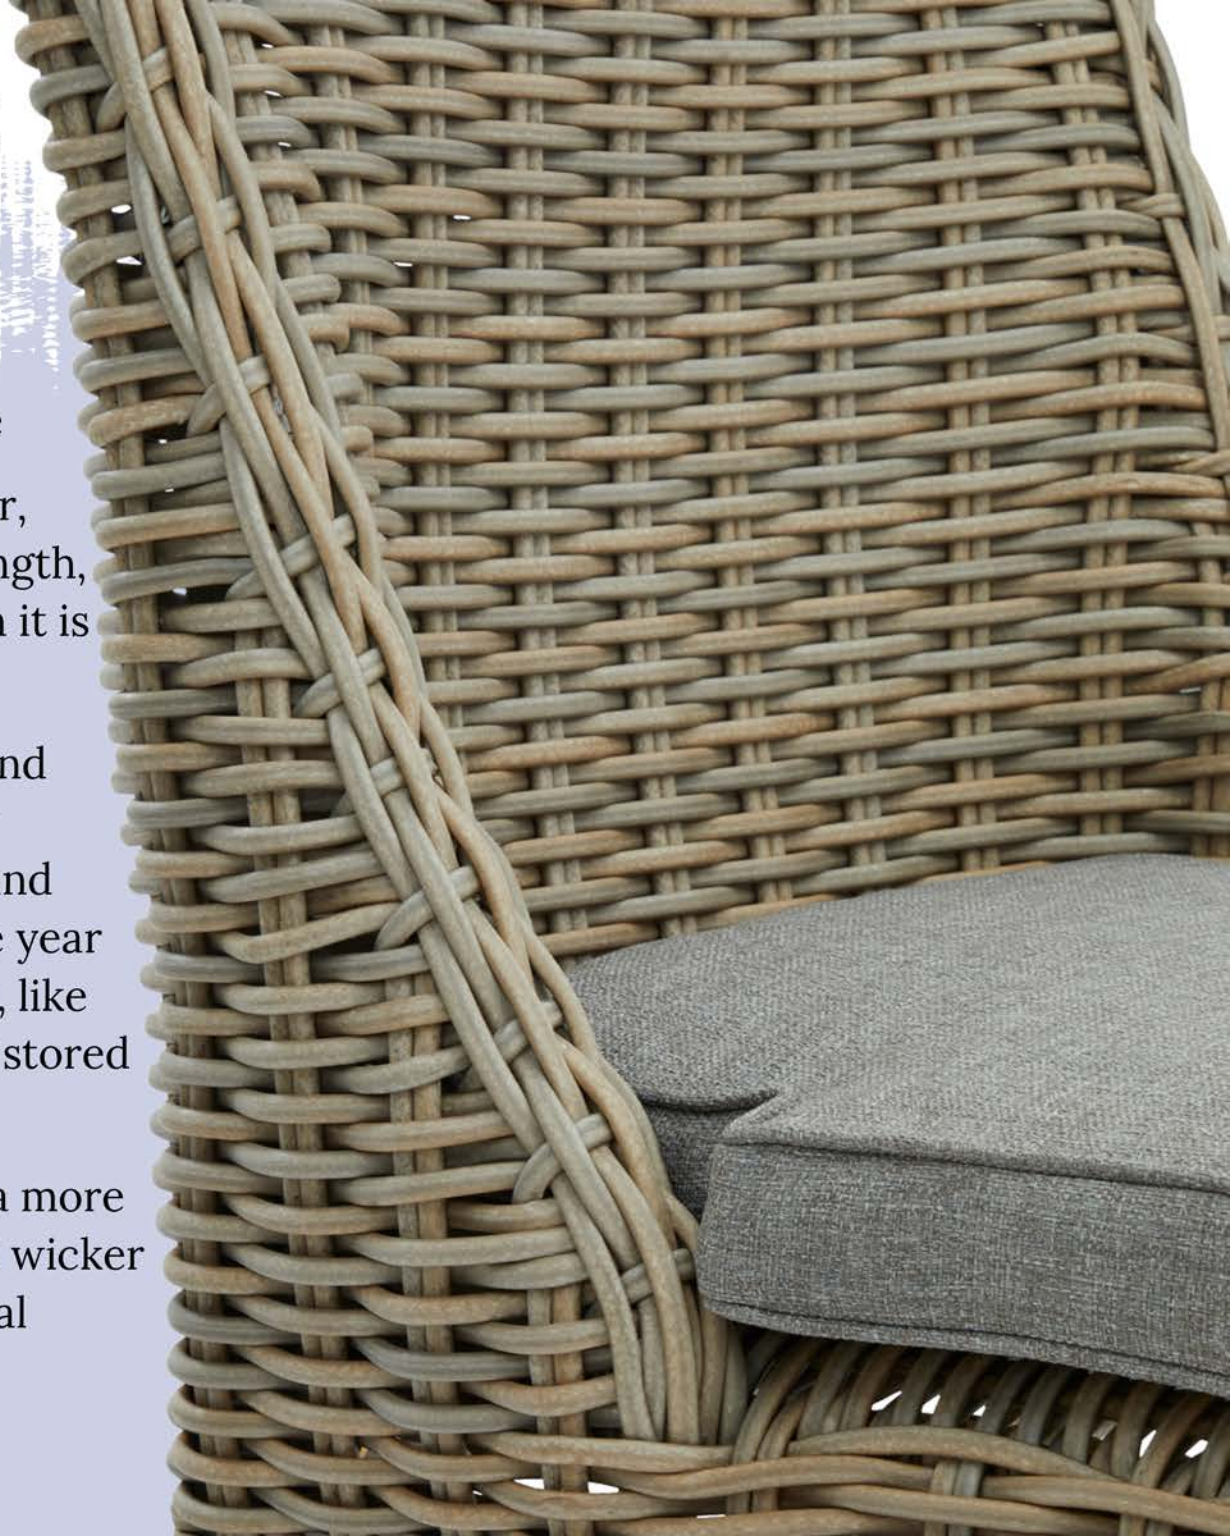

# More on our HDPE wicker choice:

**HDPE** - High-density polyethylene

**Durable** - Compared to PVC wicker, HDPE wicker provides higher strength, which makes it more durable when it is used for outdoor furniture.

**Weather resistant** - It can withstand temperature fluctuation and other weather elements like rain, wind, and even snow, so it can be left outside year round without problems (although, like anything, it will last even longer if stored under cover from the elements).

**Realistic wicker look** - HDPE has a more natural and realistic look than PVC wicker and is far more durable than natural rattan wicker.

# More on our Olefin fabric choice:

**Colour fastness grade 5** - Olefin fabric is more resistant to the damaging effects of direct sunlight and more able to maintain their colour than many others.

**Weather and stain resistant** - Because olefins are more resistant to mildew than polyester and quicker drying, they are an excellent choice for furniture that will be used in environments where there is a problem with moisture.

**Water resistant** - Olefin is water-resistant. The fibre naturally wicks moisture, moving it toward the tip of each strand, so it discourages mould and mildew. It also dries quickly after getting wet.

# Quality in every element:

**Durable Commercial Grade Foam** - DM Foam (PU polyurethane) in 30 density (D30) - 50 hardness (durometer value 50) which are commercial grade, designed for longevity and durability

**UKFR** - UK Fire retardant quality cushions

**Final Touches** - It's in the details throughout outdoor furniture that ensures it oozes high quality. From the quality of the foam through to the piping on the cushions or the 5mm tempered glass.
