Umofil, shining with its skin-friendly properties. Bionic Fiber has passed the medical level skin sensitivity-irritation test (ISO-10993). It provides high performance in underwear, activewear and swimwear products.

Umofil technology uses collagen peptide amino acid recycled from food waste and fish scales obtained from aquaculture; created a series of bionic functional fibers using subramolecular technology to integrate cellulose fiber (Umorphil Beauty Fiber), polyester (Umorphil T) and nylon (Umorphil N6U).
