

Feel the Future of Wellness — The Power of Graphene in Everyday Wear *From Yarn to Fabric – 100% Made in Taiwan*

by UNIVERSAL TEXTILE

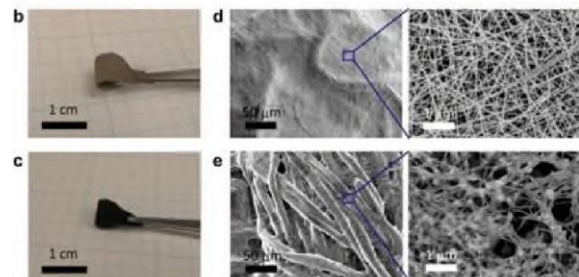

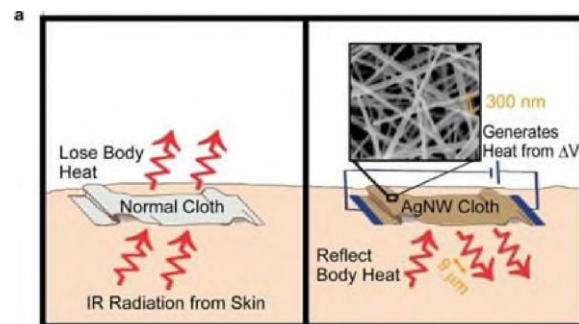

In today's rapidly changing world, textiles are no longer just about fashion — they are becoming essential tools for health and wellness. At **UNIVERSAL TEXTILE TAIWAN**, we have been ahead of the curve, investing in the development of **graphene-infused yarns and fabrics** for several years. Today, we are proud to share how graphene is shaping the future of wearable wellness.

Why Graphene?

Graphene, often called the “wonder material,” is a carbon-based innovation known for its **exceptional conductivity, flexibility, and far-infrared radiation properties**. When embedded into textiles, it creates garments that do more than cover the body — they care for it.

100 Health Benefits You Can Feel:

Especially popular in Japan's growing **active**

senior market, graphene-enhanced fabrics are designed to support the body in daily life:

- **Relieve physical fatigue** and aid muscle recovery
- **Help align posture** and support skeletal stability
- **Promote blood circulation**, ideal for those with poor peripheral flow
- **Emit far-infrared energy** that gently warms the body
- **Naturally deodorize and insulate** — perfect for extreme weather conditions
