

## Save time, increase efficiency and improve customer communication.

Bring all your data together into one central space, so you can create simple, attractive catalogues, industry specific exports and product specsheets. All this, alongside giving customers, suppliers and business contacts full or limited access to these assets and your product data.

### Our 12 favourite things you can do with SkooCloud

- 1 A collaborative location to store all your product information – there's your master data!
- 2 Centralise your product attributes from multiple data sources - ERP, internal departments, suppliers. Anywhere.
- 3 Bring together all the media associated with your products – images, videos, PDFs, the lot.
- 4 Take the stress out of product image requests by sending custom download links to any email address.
- 5 Allow your customers to register, login and download relevant product images and data themselves.
- 6 Quickly create ad-hoc catalogues from a template, using selected product images and attributes. Awesome.
- 7 Generate product spec sheets using a standard template or design your own custom one.
- 8 Build and export New Line Form data to your customer's specification, without the headache.
- 9 Easily export product image URLs for import into third party websites and keep everywhere up-to-date.
- 10 Share any of your product data with other applications - customers, stock aggregators, POS etc.
- 11 Allow customers logged into InterSell B2B to auto login into SkooCloud and self-serve images, PDFs and data.
- 12 Auto-email your customers with images associated with a PixSell sales order.
