The trend towards ultra-personalisation

The **personalisation of products** is a trend that has become commonplace, thanks to the development of customisation options. The goal? To be able to **commemorate an occasion**, an **event**, a **moment** or to create a **unique message** to develop emotions with the personalised product.

This practice, borrowed from the luxury sector, is based on consumers' desire for uniqueness. The idea is simple: to enable customers to enjoy a unique experience by taking part in the **co-creation of a personalised product**.

In addition to customisation, we are now talking about hyper-personalisation (or ultra-personalisation): a process that applies to all aspects of commerce (digital and physical). The aim is to offer a key differentiator with the advantage of increasing the source of revenue by 10 to 25% and ensuring customer satisfaction.

«According to estimates (2022) by McKinsey, **ultra-personalisation** could generate up to €800bn in additional value in the retail sector - equivalent to around a quarter of retail sales in Europe.^a»

^a[Experts 2022] Ultra-customisation: competitive advantage today, survival tomorrow

OVERVIEW OF CUSTOMISABLE PRODUCTS

Some of the best-known customisable items include clothing (t-shirts, sweaters, etc.), shoes, bags and many everyday accessories:

pens

mugs

pencil cases

notebooks

reusable water bottles

But that doesn't mean we're leaving out the gifts and other presents:

- liquor bottles,
- condiment pots,
- · drinking glasses,
- · candles,
- cutting boards,
- · fragrances,
- product packaging,
- knives...

Those objects are just ideas of personalised gifts, you just have to find the right message. The list doesn't end with these few examples: remember that all objects can be personalised using different techniques.

Different personalisation techniques

SCREEN PRINTING, EMBROIDERY & ENGRAVING OVERVIEW

Screen printing

Screen printing is a printing technique that uses a screen to transfer ink onto a surface. It can be used on a wide variety of materials such as fabric, plastic, glass, metal and wood.

With this method, a **wide range of colors** can be used, which comes in handy for eye-catching designs.

But screen printing is not without its disadvantages. It can quickly become **expensive** for small quantities and the equipment set-up time is not suitable for fast production runs. It is not particularly well suited for colour gradations. Another disadvantage of screen printing is that it is not durable as it tends to fade over time. It does not resist to abrasion and scratches; it also tends to peel off over time.

Embroidery

Embroidery is considered to be a textile art, involving the creation of patterns or designs on fabric. It can be done on a **wide range of materials** - but mainly textiles (linen, leather, cotton, etc.). This technique also allows **very complex designs** to be created with great precision and many colours to be used.

© Ma Fabrique Perso

Unfortunately, an embroidery machine is **expensive** and operating costs can raise the cost of manufacturing a textile product. The size of the embroidery and the complexity of the design can also be a challenge. Embroidery is **not a very durable** technique. It will deteriorate over time (threads coming loose or colours fade).

Sublimation

This is a technique of personalisation by **printing followed by heat transfer**. It offers an unlimited range of colours and can be used on objects of all shapes (not just flat products). Sublimation is also **scratch-resistant** and dishwasher-proof.

© Ma Fabrique Perso

However, for this technique to be effective, the surface to be personalised must contain **a layer of polymer**. Without this, the colour cannot adhere. And since not all materials can be personalised, the cost of "sublimatable" products is **generally higher**.

This technique works in two stages: printing the transfer and applying the transfer by heating. Unfortunately, the total time required for this personalisation is **quite long**.

UV printing

UV printing is based on the use of a **UV-curing ink** that reacts to UV light and hardens the ink, enabling the creation of patterns and designs on a variety of materials.

© Ma Fabrique Perso

It offers a number of advantages:

- high print quality;
- vivid colors ;
- smooth finish;
- a versatility that includes a wide range of materials.

Its **speed** is also a major asset, with instant curing reducing production times.

- Nevertheless, this technique has a number of limitations:
- the **high cost** of the equipment;
- the need for regular machine maintenance;
- the required compatibility of materials with UV curing;
- the **complexity of the process**, requiring specific training and expertise to guarantee optimum results.

Engraving

Engraving is an accessible technique, both in terms of price and ease of use. It consists of creating a permanent mark on the surface of a material using a laser or mechanical machine. It **resists wear** and **tear** and does not fade over time. The high quality appearance will add elegance, enhancing the perceived value of the personalised item.

Engraving is one of the most environmentally-friendly ways of personalising a product, with no added ink or products containing solvents. It can be applied to a wide variety of materials:

wood

glass

metal

Discover our application pages

plastic

leather

Engraving machines are capable of reproducing designs, logos and text with **great precision**, whatever the complexity and detail of the marking.

If you compare product customisation techniques, it's easy to see that engraving has a number of advantages:

- · high-end appearance that adds a certain value to the product;
- sustainability;
- · versatility of materials to be engraved;
- · versatility of designs and details.

What are the limits? According to the product material or the technology used, engraving does not offer colors but can be contrasted when using the laser technology. However, the marking will therefore be of a uniform color unless a colored fill product is added. <u>Silver/golden wax</u> or <u>paint for metal, glass and plastic</u> is common.

Personalised in-store engraving: an asset for the customer experience

PERSONALISED ITEMS BOOST FOOT TRAFFIC IN SHOPS

Since shops reopened following the health crisis, getting consumers to come to the point of sale has become a real challenge. In January 2022, the foot traffic in retail shops was down by 28%^b.

To attract consumers to their shops, brands now need to offer a unique customer experience impossible to find on the web or elsewhere, with customer entertainment at the heart of the experience. At a time when online sales sites are on the rise with almost immediate delivery methods. the majority of customers who take the time to visit a shop are looking for a special experience: games, tests and a special welcome in line with the brand.

The personalisation of objects based on engraving technologies is therefore the ideal in-store solution for creating experiences that will attract customers to physical shops.

By taking part in the choice of personalisation and engraving themselves, customers benefit from a **shopping experience**. They become involved in the personalisation of products, rather than spectators. They create a unique connection with the brand and the product they want to buy that they will not find anywhere else. In-store engraving is also a form of entertainment, with an engraving machine at the center of attention, making nearby customers want to experience it for themselves.

The **possibilities for personalisation** are almost endless. For example, you just finished engraving a bottle of perfume or a candle? Give your customer the choice of adding a gold color to the inside of the engraving. Note: 90% of customers who see someone else's item engraved will also want to personalise their purchase.

Create in-store entertainment

It is now essential to have a machine that stages the engraving to the product to be personalised.

Laser

The M20 X and WeLase™ have been designed with this in mind. With their glass fronts, these machines are ideal for showcasing a product in a shop or at an event.

11

Dedicace™ software

But don't overlook the software part, which is also important. It allows to facilitate the machine to be used by the shop personnel without the need of training. Plus, certain accessories such as the Dedicace tablet allows the engraving of drawings and handwritten text.

A MACHINE TO MATCH THE AMBIENCE OF YOUR SHOP

An **engraving machine** can be installed in the back of the shop if you do not wish to personalise the products in front of your customers, or if the personalisation requires other post-engraving actions, such as polishing jewellery, for example.

But you can also use it in-store to **assert your identity** and **associate** it with your brand image.

There are three possible scenarios, depending on the environment desired by the brand.

- The creative experience is **highlighted** for customers with product customisation on a tablet or paper catalogue (the machine is in the back room).
- The machine is positioned in the shop and visible to the customer: he or she takes part in the creation of the engraving on a tablet or physical medium and sees the machine in action.
- The **mystery is kept**, and the customisation is done out of sight, which is quite common in luxury boutiques.

If you want to give your shop an artisanal feel, you can choose a mechanical machine with a **traditional** and **authentic style**. For a more **innovative image**, you can opt for a laser machine. In any case, it is not only about typing a text and start engraving, you need to take into account the product, its material, the desired effect, the budget and the working environment.

Please note: As well as adding to the ambience of the shop, the way the engraving looks contributes to the brand's image. For example, engraving with a mechanical machine will give a more traditional, even up-market impression. Conversely, engraving with a laser machine will give a more modern look, reflecting a more contemporary brand identity.

Customising items on an e-commerce site: a solution for differentiation

OFFER A COMPREHENSIVE AND REASSURING ONLINE COURSE,

To implement **personalisation** on your website, you need a simple, intuitive interface to make the customer journey as smooth as possible.

Previewing these products on an e-commerce site allows you to simulate the engraving applied to customisable products, with the different fonts or icons available. This is an **important reassurance** for customers, which can also encourage them to buy, they can see what the engraving will look like on the product. It also allows them to play with the possibilities and enjoy a richer experience than that of a customer who has just come to buy an item. For optimum rendering, it is possible to add a 3D configurator to this preview, giving a 360° view of customised objects. This function allows customers to see

Please note: Gravotech does not provide this service, but our software can interface with these developments.

what their product will look like, and thus encourages them to buy.

We can define 2 categories of online business here:

Products designed to be personalised: these are generally not sold unless they are engraved. **Their purchase price is low**, but their value is multiplied by 5 to 10 once the object has been personalised.

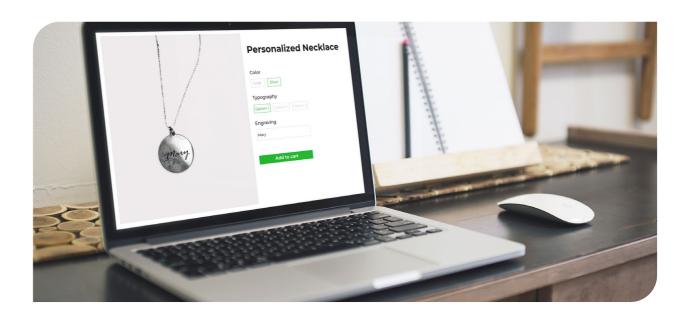

High-value products on which engraving can be added as an option: the aim is to further increase the value perceived by the customer. These products can be sold without engraving, but the addition of engraving can **increase the selling price** or switch the customer to a product that will be more beneficial to you.

Gravotech's solutions can be easily adapted to these different product categories.

14

BRING ENTERTAINMENT TO YOUR SITE

The fun aspect of visualisation is a factor to be taken into account in an online shop. Before making their choice, customers can spend time on the site, looking at the **different possible combinations for personalising the object**.

Customisation can then be achieved:

- · by a personalised engraving, with a personal text, typography or logo/drawing
- · by establishing tailor-made criteria.

In addition to the preview, the site can be enhanced with a photo library or customer reviews.

15

CUSTOMISATION CAN BOOST YOUR REVENUE WITHOUT CHANGING YOUR PRODUCT PORTFOLIO

Hyper-customisation can also increase your revenues.

A consumer will be prepared to pay 20 % more for a personalised product.

1 in 5

1 person in 5^d would potentially be interested in this additional offer.

So you can **increase your profitability** by focusing your sales on **higher-margin products**.

As far as online shops are concerned:

59%^e of marketing professionals have a positive return on investment after launching a personalisation service.

In general, engraving is not offered free of charge; it is an **additional service for which there is a surcharge**. In other cases, you can also "offer" it under certain conditions, such as a **minimum average shopping basket**, or for a **limited-time event** (end-of-year celebrations, Valentine's Day, Mother's Day, etc.).

Of the **61% of marketing professionals** who are convinced of the **importance of personalisation**, 51% do not know how to implement it.

- ^f- Etude Invesp : Online Shopping Personalization Statistics and Trends

For brands selling products online, the main challenge is to **stand out from the competition**. Faced with the many players on the Internet, they need to adapt and offer a competitive edge to a highly volatile customer base. Personalised engraving offers an opportunity to stand out from the crowd by offering a **unique experience**, making it possible to offer a **new range that is attractive** to customers.

Customised items build an attractive offer

THE ADVANTAGES OF PERSONALISED OBJECTS

- propose an attractive offer for some of your products using engraving
- · raise awareness and enhance the company's brand image
- create a new collection, with new items or based on existing products, dedicated to engraving
- **highlight the product**, increasing its value by adding an aesthetic touch.

In all cases, the aim is to **trigger the act of purchase** and **increase your customers' average spend** by offering engraving in addition to selling products. You have several options:

- charge for personalisation in addition to the price of the product as an extra service
- **offer engraving in the selling price** on specific products (new collection, high-profit product, large perfume bottle, etc.)
- offer personalised engraving on special occasions (Valentine's Day, Christmas, Father's/Mother's Day, birth, etc.) and adapt the engraving by adding themed emoticons.

These different choices will enable you to provide your customers with an extra level of satisfaction, and maintain a close relationship with them.

DIVERSIFICATION TO BOOST YOUR INCOME

Do you already have a signage business and you are looking to diversify your activity to increase your income?

Personalising products with a low purchase price such as pens, photo frames, glasses, mugs, pet medals can considerably increase your sales! By buying these types of objects, then engraving them with your laser machine, you can resell them for **4 to 10 times their purchase price**.

Therefore, you can launch a personalisation business for private individuals by offering personalised gifts, which are particularly popular during the **holiday** season. Personalised items with name, first name, quotation, message, or date add significant value.

You want to go one step further and offer a BtoB personalisation service?

Personalised corporate gifts are given during events like business anniversaries or Christmas parties. They can also be branded with their corporate identity for product launches or trade shows.

Conclusion

Consumers are keen on personalised objects. Engraving is therefore an attractive solution for boosting your sales, both in physical shops and online. You can offer a captivating experience to attract customers instore and build loyalty by creating a unique connection with your brand, and easily differentiate yourself from the competition. You don't need to redo your product offering, or carry out extensive work to find or design new models.

Relayed on social networks, personalised products can help you develop your image and reach new customers. For all these reasons, personalised engraving is a great way to increase your average shopping basket, keep up with market trends and expectations, and boost sales and product awareness. But which technology is right for you?
