Empowering Women Across the World Through Innovation

Underserved Health Needs

- The health of women directly influences the health of families, communities, and economies.
- Women represent over 50% of the UK population, yet their health needs remain underserved.
- Globally, only **4% of total healthcare research and development funding** is directed toward women-specific health conditions, despite women accounting for **70% of healthcare decisions and significant health burdens**.
- Through digitally-enabled solutions, innovative care pathways, and targeted investments like Women's Health Hubs, we have the tools to create lasting, impactful change

Opportunity Pathways to accelerate and integrate Women's Health Innovations

- ❑ Digitally-Enabled Early Detection
- ❑ Transforming Maternal and Reproductive Health
- ❑ Unlocking Economic and Workforce Potential

Building a Healthier Future for Women

By prioritizing women's health innovation, we can:

- ❑ Strengthen health systems and reduce systemic inefficiencies.
- ❑ Unlock economic potential through improved workforce participation and productivity.
- ❑ Deliver equitable care that transforms lives across the UK and the world.
