The NHS InSites Programme is commissioned to aide innovation adoption, spread and cultural change

Supporting nearly 155,000 NHS staff

To adopt and spread innovation

Across 18 Sites covering around 30 million patients.

NHS InSites programme objectives

- Evaluating NHSE supported innovations in real-world settings aiming to generate evidence of their effectiveness and impact (e.g., on NHS priorities such as health equity) and understanding the strategies for successful implementation.
- Developing the organisational capability and support/advise infrastructure of the InSites partners to facilitate rapid adoption, evaluation, and scaling of impactful innovations.
- Enhancing the NHS's ability to inclusively develop the health and care workforce talent pool, thus fostering an innovative culture.
- Informing NHS England's policy and strategy on the effective dissemination and adoption of innovation nationally by sharing learning and providing a framework (including standardised processes and documents) for implementing innovation.

How it works

18 specialist Sites

Acute care, mental health and community, ambulances and specialist hospitals

200k per year Innovation budget

All Sites received funding from NHS England to support team and projects

Diverse pool of innovators

Working with NHSE supported innovators (CEP, NIA, SBRI, AI Award)

Bespoke matchmaking

Needs based matching process – innovators matched with sites depending on priorities identified

Data room and reporting

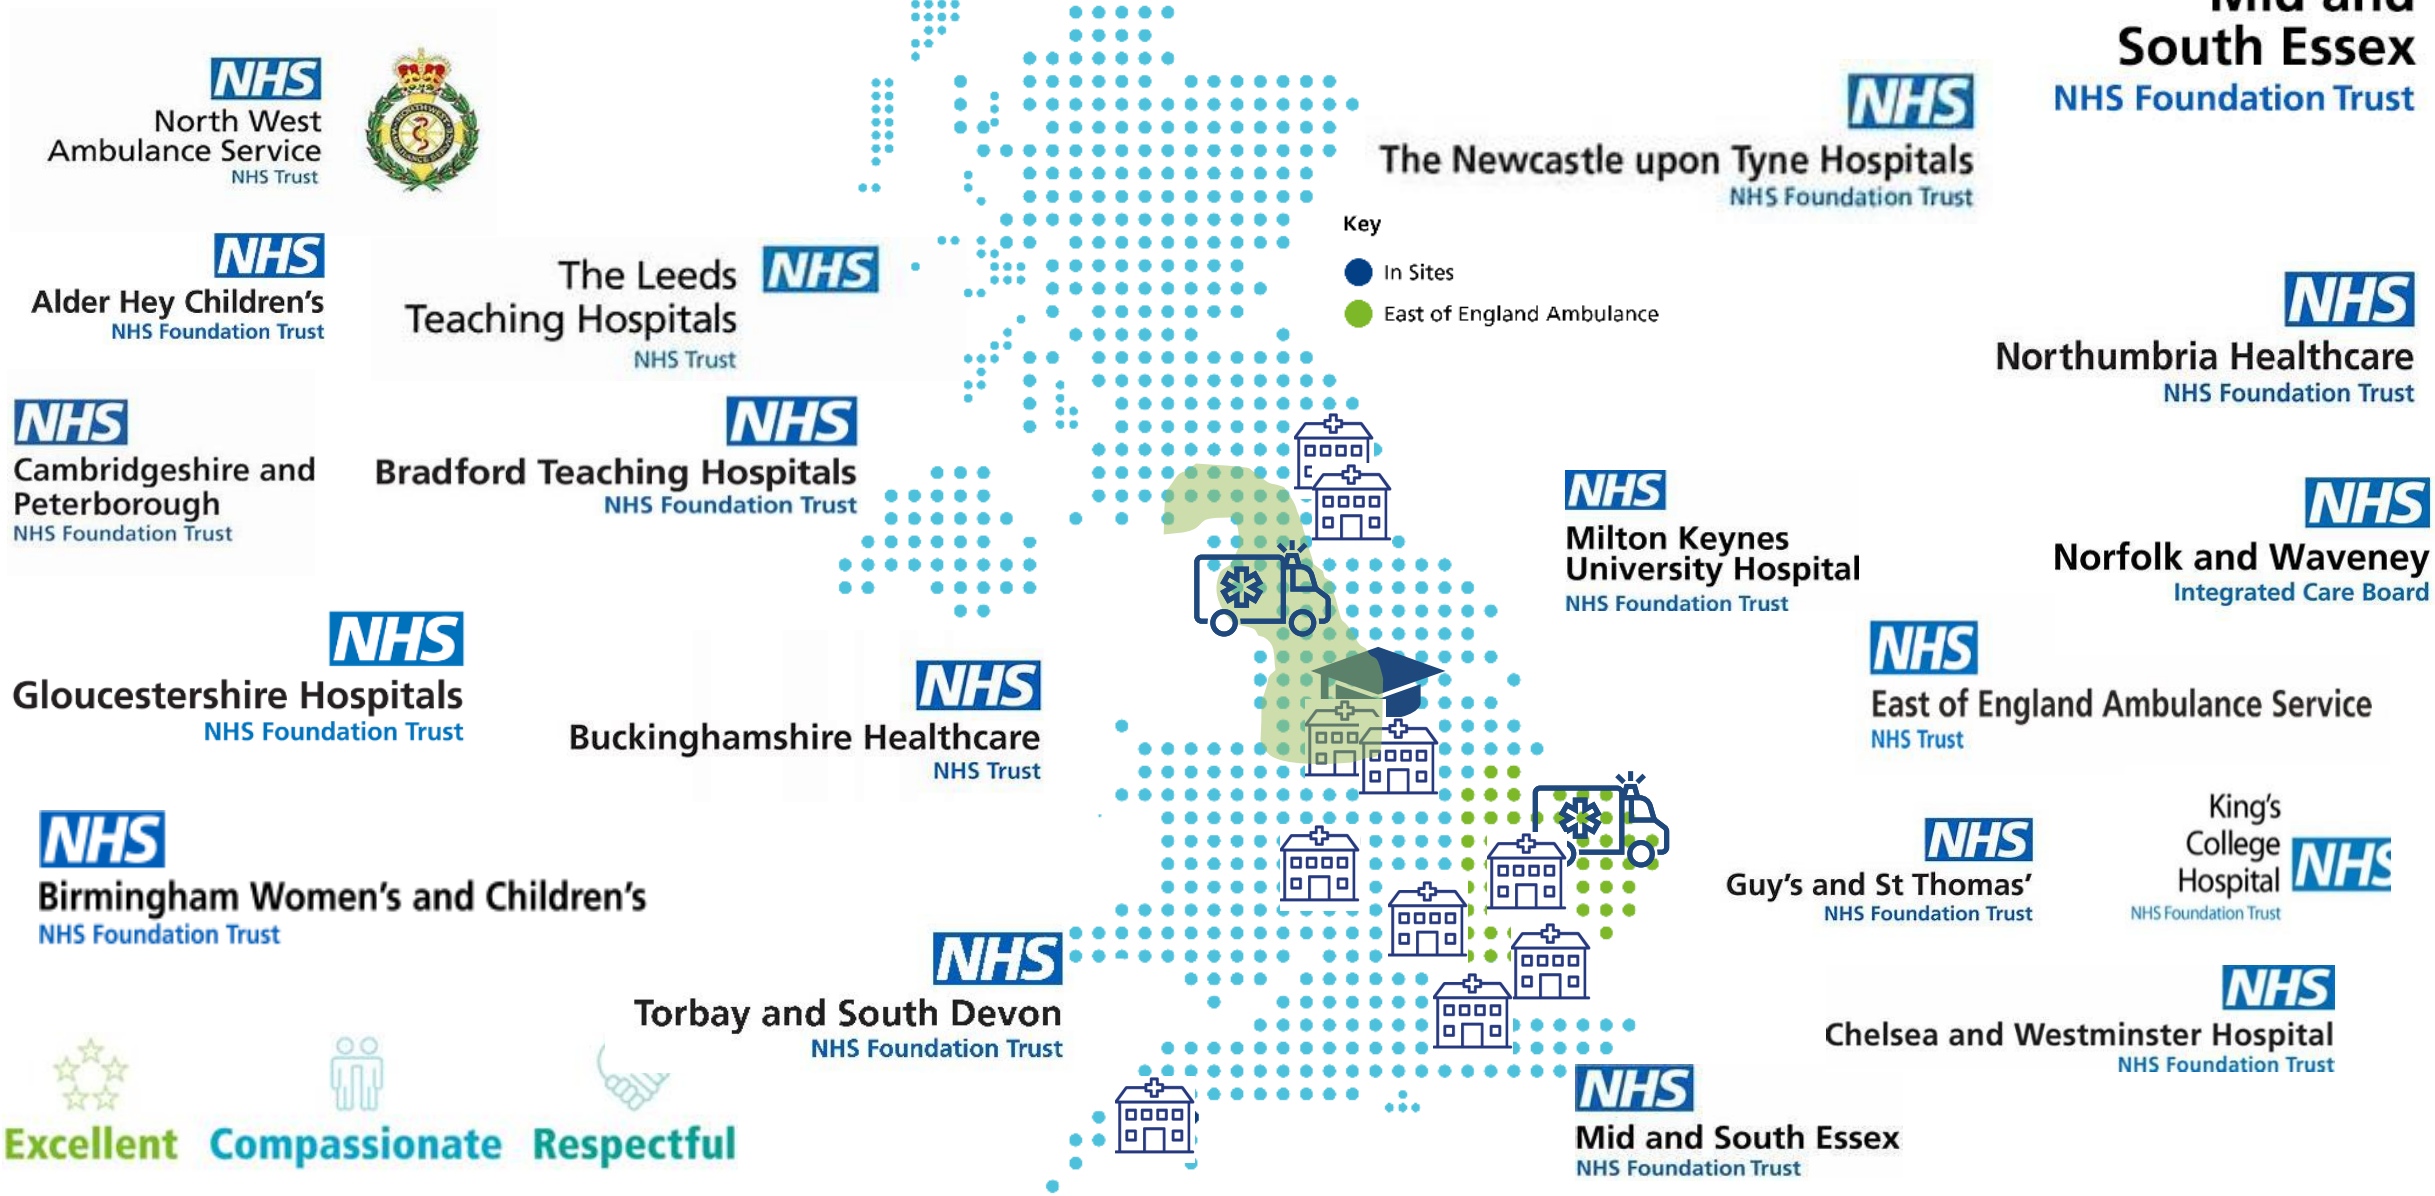

Transparency is key: all sites required to share their work, data and align where possible.

Peer network

Joint work to also support innovation culture internally and sign up to shared processes

18 NHS sites collaborating

Excellent Compassionate Respectful
