working together for  
a **net zero** future.

www.GoLowCarbon.co.uk

greetings, from

## Go Low Carbon.

We're delighted that you've chosen to review our solar info pack... it means that you're a step closer to shouting your carbon-reduction accomplishments from the rooftops (literally)!

### here's what you can expect

- 1-2 who are we?
- 3 why choose GLC?
- 4 why should you go solar?
- 5 what's the process?
- 6 benefits of going solar
- 7 let's crunch the numbers
- 8 client testimonials
- 9 other GLC products
- 10 what happens next?

## who are we?

We're a bunch of uber-enthusiastic carbon experts on a mission to support businesses in their quest to save time, money and carbon emissions.

The ultimate goal; steer all parties towards a reduction in their carbon-footprint, bringing them closer to achieving a Net-Zero status.

Meet Ryan, our incredible Managing Director and the brains behind the entire Go Low Carbon operation.

It sounds cliché, but our customers mean everything to us. We get our kicks from working diligently within their vision to achieve their goals in a timely and cost-effective manner.

All whilst providing honest advice, unwavering support and clear, jargon-free communication.

There are a few ways in which we can help your business become more carbon-conscious (we'll get into all of that later), but we're here to talk to you today about a GLC solar installation and the benefits that it will bring to your business.

Next up: It's Islam!  
Islam is our team-motivating CEO with an unquestionable passion for creating a better world for all of us.

## why choose GLC?

If you weren't 100% convinced by our intro and you need further evidence of our abilities and integrity within the world of carbon reduction, here are a few key accolades that may just sway you:

- We're an MCS Certified Approved Installer
- We have our RECC (Solar Customer Code Scheme)
- We were a Chamber Business Awards 'Planet Saver' Award Nominee 2021
- We have our Waste Carrier License

We also have flexible financing options available to you. One of which allows you to install an entire solar PV system free of charge and you'll still benefit from approx. 30% savings in your electricity moving forward. Ask about our [Power Purchase Agreement](#).

All said and done we're your honest, reliable specialists in delivering end-to-end solar solutions for your business.

We design, supply, install, maintain and analyse every installation that we take on, we're with you from start to finish and we're always available to support you or answer questions when needed.

Here's Taha!  
Taha is our incredibly talented man of precision, he's our lead solar engineer & designer.

# why should your business go solar?

Solar energy has the capability of powering businesses, homes and communities without damaging the environment around us.

A commercial solar panel installation will turn your roof into a responsible, passive income generator simply by harnessing the power of the sun.

Of course, there is an initial cost to the installation, but this should be seen as an investment more than an expense. Your Go Low Carbon solar panel array is built to last, and after a short while you'll soon be seeing great returns. And, we're not just talking about the energy cost-savings, we're talking increased viability in the eyes of your customers and potential clients.

More and more buyers are looking for proof of a supplier's sustainability credentials, we'd hate for you to miss out on potential sales.

Meet Tara.

A cornerstone of Go Low Carbon, Tara holds every job together from a project coordination vantage point.

## what's the process?

- 🌿 We'll have an initial chat with you to qualify the job and better understand your needs, this may be over the phone, in person or via a video chat
- 🌿 We'll arrange a site visit to survey your property, take a few pictures, locate your electric meter and determine the orientation of your rooftop
- 🌿 Once we have all of that the details are passed to Taha for your installation to be planned and designed

before design

after design

- 🌿 Next, you'll receive a summary of the work and a final quote for your approval
- 🌿 Once approved we'll arrange to collect your previously agreed deposit
- 🌿 We'll arrange for a site visit from one of our trusted electricians for a final inspection before installation
- 🌿 We'll arrange an installation date that suits you and your business, and in no time you'll have solar power!
- 🌿 Finally and importantly we'll continue to support and advise you as you move forward on your net-zero journey

Meet Paul. Our integral guy on the ground (or roof!). Paul is our lead installer - a master of his craft and a true gentleman to boot.

# the benefits of a GLC solar installation for your business.

Up to

**45%**

return on investment

Save money while  
also saving the...

Enjoy, free, clean energy  
for 25+ years

(your installation will pay  
itself off within 5!)

Increase your  
**marketability**

Reduce operating  
costs &  
**increase profits**

Protect your business  
against future energy  
price rises

Become more attractive  
to prospective clients  
and consumers

Get closer to becoming a  
**Carbon-Zero**  
organisation

**GoLowCarbon**

working together for a **net zero** future.

... there are lots more - let's chat, we'll  
tell you all about them.

## let's crunch the numbers.

We know what you want to see on this page...

You want to see how much you'll need to spend on an installation and how much it'll return you.

Of course you do, that's the nuts-and-bolts of your decision.

The hard fact is we can't provide it for you at this stage. Every single installation is different, the cost and return in £'s depends on a huge range of factors relating to your building and site.

Presenting rough figures would only seek to mislead you - however following a brief (complementary) chat with us we can absolutely present estimated figures.

## having said that... the following is fact.

1

Solar is a predictable investment, it will return you 25-45%... imagine if someone guaranteed you those returns on the stock market, you would jump at the chance.

2

Moving forward your business will be using electricity. Stay as you are and you'll be paying more than necessary to energy suppliers. Go solar and you'll have more money to invest back in your business.

3

Solar is the fastest growing energy source in history. The demand has led to an increased number of reliable manufacturers which has driven the cost of hardware down.

**Solar PV systems have never been more  
affordable or accessible.**

## client testimonials.

Go Low Carbon were very friendly and helpful and always kept in touch with us throughout the process.

I am really happy to have worked with Mark. He helped save us money on our energy and also gave us peace of mind.

**I would highly recommend Go Low Carbon to anyone.**

From start to finish our solar installation process has been simple and flawless. The team at Go Low Carbon are **industry leading** in terms of their expertise and customer service levels... they're affordable too! I couldn't recommend them highly enough.

No pushy salesmen, just a company built on **foundations of pure customer service.** Providing up-to-date independent information current energy prices while allowing customers to decide on the right contract to suite them along with support and advise when needed. **A modern day company with modern day ethics.**

**Excellent - first class service.**

We have lots more customer testimonials and case studies that you're welcome to review, please simply ask.

## other GLC products.

### energy brokering.

As well as being solar experts we also have a dedicated team of independent utility consultants.

These incredibly knowledgeable energy enthusiasts work diligently with UK businesses of all shapes and sizes to thoroughly review their energy tariff in order to move them to a more cost effective, more carbon-conscious model.

We've been in the business a long time, as such we've got great scope of the vast majority of UK energy providers that would like your business. Every business is keen to reduce their energy costs, let us do the labour intensive market review on your behalf - you'll end up better off financially and environmentally.

### carbon auditing.

Whether your business has a roof to install solar panels or not, there is plenty that you can be doing to reduce your carbon footprint.

The problem is, you can't fix what you don't fully understand - thankfully we're here to help.

By reviewing your current business model and operation in a non-intrusive way, we'll be able to determine exactly what is contributing to your carbon footprint. From there we'll work with you to integrate a series of actions that will gradually reduce your emissions (direct and indirect) to bring you closer to being a net-zero organisation.

Meet Davie. Our lead guy when it comes to Energy Brokering. What this guy doesn't know about UK energy suppliers can be written on the back of a stamp!

Here's Elspeth! Elspeth is GLC's carbon auditing guru. With her guidance your business will become more environmentally responsible in no time!

## what happens next?

Hopefully we've peaked your enthusiasm for considering a solar panel installation for your business.

Next... we'd love the opportunity to chat with you. We'd like to better understand your business' goals, sustainability ambitions and the driving force behind your ambition to become a greener business.

We'd also like to answer your questions. The world of solar and renewables can be confusing, our approach will always be jargon-free and honest - unless you need all of the technical stuff...

### in which case we should definitely chat!

You've met some of the team already, but who should you chat to first?

Hi, I'm Steve, your dedicated Go Low Carbon point of contact. When you're ready to chat you can reach me here:
