Your guests will always enjoy good quality internet service. By using our 5G network, we provide a high-capacity solution. Guests will still get the high-quality speeds at busy times.

Mobile networks offer a high level of resilience. If one cell fails, the others automatically take over. You won't have guests complaining on a rainy day with live sports showing on the TV or Online meetings failing.

Telet's 5G mobile technology operates in golden spectrum. Traditional Wi-Fi is shared and so other devices will interfere. We are allocated unique frequencies by OFCOM which guarantees a private experience.

Our network offers both capacity and coverage. Guests will enjoy gigabit access within 500m of a cell, but adjacent areas, such as a sea front or marina, will also be covered with lower speeds. It covers all bases.

Wide area coverage provides flexibility. If you need to add or move one of the caravans or a user's equipment, it won't matter. Your guests will remain connected as long as they are in range of one cell.

...and relax, you're online

Our 5G networks for holiday parks can deliver fibre broadband level connectivity, even in remote areas where there is no coverage.

You offer the great escape.
We provide the access.
