Prokiosk

**ProKiosk**, our self-service solution, has been created specifically for visitor attractions.

Optimise your Front of House and Admissions process to enhance your customer experience.

Pro**kiosk**

Pro**Kiosk** was developed to help streamline your admissions process, by reducing queues and accelerating the ticketing process.

Traditional admissions process requires several members of your team to man tills and entry points, forcing customers with simple admission requirements to queue alongside customers with queries and more bespoke requirements.
ProKiosk removes that need, allowing customers to quickly purchase tickets and make payment.

You can also integrate ProKiosk with access control, as the barcodes on ProKiosk tickets control your turnstiles, delivering an automated ticket purchasing, redemption and access process.
- Reduce queue times
- Intuitive booking process
- Integrates with DigiTickets
- Integrates with access control
- Real-time reporting
