What Causes Condensation?

When warm air meets a cold surface, such as the metal walls of a shipping container, water vapour in the air condenses into liquid water.

This can be a problem for medium to longer-term users of a shipping container for storage because it could lead to damp and mould damage to the contents stored inside.

So how do you help prevent this from happening?

Vitaly, you should ensure your container is well-ventilated. Optimum airflow assists in removing excess moisture from the air and helps keep the contents inside dry and safe.

Adaptainer's XL Vent container makes this easy for you.

Better Ventilation Helps Take Your Condensation Damp Risk Worries Away

Discover how the XL Vent Container delivers up to 8x more airflow

XL Vent Container

Is Your Secret Weapon Against Condensation Damp

With up to 8x more airflow provided by the XL Vent container you can stop worrying about whether your container has enough ventilation to help safeguard stored contents from condensation dampness.

This container is designed to provide more airflow from all four aspects of your container, including the doors, front wall and both sides of the unit.

Now you can have added condensation damp protection for your storage on autopilot!

Unique Patented Features. **With up to 8x More Airflow Than Other Containers**

8x

Boosted Omnidirectional Airflow From Both Container Sides AND Both Ends Is Delivered In Three Powerful Ways:

● XL Vents

These supersized door vents deliver up to 8x more airflow than other containers to help you reduce condensation risk.

XL Vent containers are famous for these vents, and they work together with our other ventilation features in a system to help keep your storage dry and safe.

Exclusive to the XL Vent container

● Header Vents

Gives you unrivalled end-to-end ventilation for your container. This uniquely designed multi-vent panel is located on the front wall, which is sometimes considered the rear of the container.

The patented panel design means your container will have boosted ventilation even when side and front wall vents are blocked off, such as when you position your container against other shipping containers or a building wall.

Exclusive to the XL Vent container

● Multi Side Vents

A generous series of standard shipping container air vents are also positioned along both sides of the container.

Think of these vents as simply supplementary airflow for the already powerful XL Vent system.

See How the XL Vent Container System Works

XL Vents

Patented Feature

Compared side-by-side to the humble standard container vent you can see XL Vent lives up to its name.

Dwarfing standard shipping container vents in both size and airflow power. These monster-sized door vents will be responsible for giving your container up to 8x more ventilation.

The patented design, which is exclusive to our containers, features a 'labyrinth system' ensuring zero water ingress risk.

Strategic door positioning of the XL Vents means you always get a powerful source of airflow. Even if your container is positioned against another container or building wall.

Despite the power of XL Vents you'll discover they are just the beginning of the unique anti-condensation features this container holds for you.

Airflow Power: Above illustrates the significant size difference between XL Vents and standard container vents

Next: See How Our Patented Header Vents Feature & Added Side Vents Give You Even More Airflow Protection

**The New Header Vents Feature Takes
The XL Vent Container from Great. To
Incredible.**

Header Vents

Patented Feature

Introducing a Groundbreaking End-to-End Ventilation Solution. Put Simply, Say Goodbye to Blocked Airflow Risk!

Other shipping containers at best, may have extra vents on the front wall (often thought of as the container rear.) The problem with this is that these vents, as well as side vents, can get blocked when the container is positioned against other containers, or a building wall.

This blocked airflow can result in increased condensation risk for your storage contents.

Not with the XL Vent container though!

The patented XL Vent container design removes the potential for this airflow blockage problem for self-store users.

XL Vent container is the only manufactured container in the world which can still provide condensation fighting ventilation from both ends of the container when front wall ventilation is blocked.

That's in addition to **side ventilation** features also built into this container, which if blocked too, will mean the header vents can come to the rescue with vital airflow.

Now You've Got **Mother Nature's Airflow Remedy** Helping Protect Your Possessions From Damp. No Matter What's Against Your Container

How The Header Vents Work

In more technical terms. The design of an XL Vent container means the front wall header rail uniquely features a Z section profile as well as asymmetrical positioning of the vents.

What does this mean in simple terms?

Think of it as special space for vents along the top of the container. This small space is engineered to be slightly set back from the container wall. Inside the space is where the vents are perfectly positioned to pass air through unhindered.

This means you get extra protection against condensation. That's regardless of whether you have your container positioned against another container, or building wall.

And that's not all. The XL Vent container has 2 more built-in condensation defences...

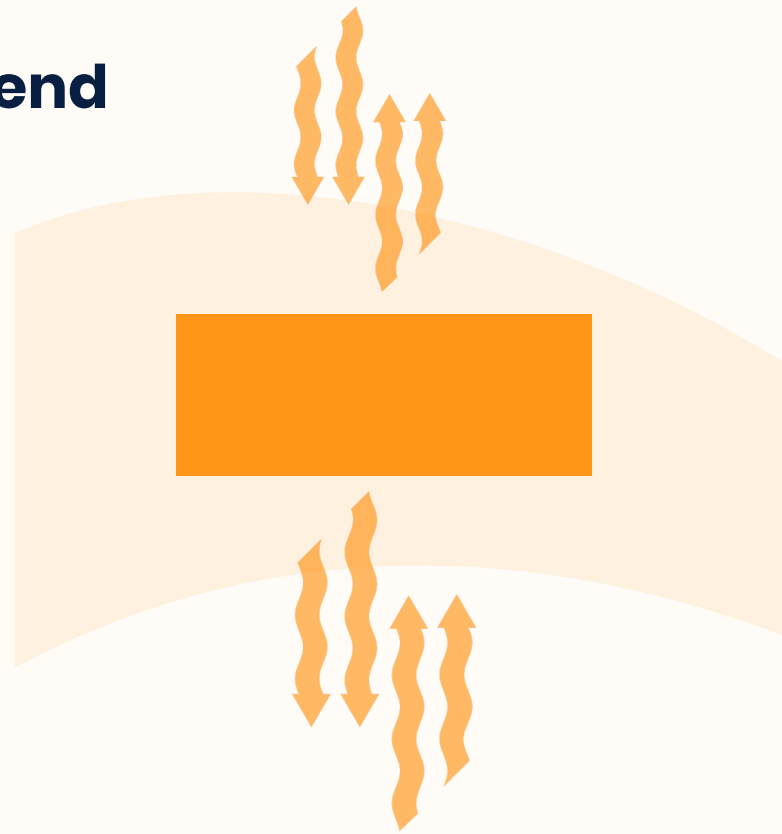

XL Vents and Header Vents Combined Help Give You **Super Powers Against Condensation**

Multiple Side Vents Extend Airflow Even Further

The already superior airflow provided by the XL Vent container is further complimented by a series of side vents positioned on both sides of the container.

Other shipping containers may have side vents. Not an impressive feature alone. But these side vents combined with the XL Vent container's mighty end-to-end ventilation system make this container unparalleled in its ability to deliver up to 8x more airflow.

A Container Floor With Hidden Condensation Fighting Powers? We Took Care of This For You Too...

When water gets on the floor of a shipping container, for example by driving rain, or droplets from shoes or other clothing, it typically soaks into the wood. The problem with this is that this then becomes a condensation hazard.

XL Vent container helps solve this problem thanks to a PU coated floor. The polyurethane coating acts as a sealant which prevents water soaking into the ply hardwood or bamboo floor.

Just wipe away any water on the surface of the floor and you're done!

Plus, it's easy to clean so your container floor is more resistant to stains and stays looking its best.

How Does XL Vent Container Compare to Other Shipping Containers? **We Let Our Customers Do The Talking...**

Lynn Carr manages a UK self-storage business and says: **"The XL Vent containers are far superior and eradicate any issues with condensation."**

"I recently had to move a customer from a container purchased from another supplier as he was suffering with condensation issues.

The XL Vent containers are far superior and eradicate any issues with condensation. I wish I could change all of the containers I previously ordered to Adaptainer containers."

The Best Shipping Container In The World? **You Be The Judge**

See All The Benefits XL Vent Container Gives You...

● **XL Vents**

These exclusive and patented supersized vents help deliver up to 8x more condensation busting airflow.

● **Header Vents**

Get protective airflow into your container even in scenarios where other shipping containers would fail.

● **Side Vents**

Multiple side vents are installed along each side of the container.

● **Damp Defence Floor**

PU coated floor which repels water so it can be easily wiped up, helping keep your container condensation free.

● **Easy Open Handle**

This easy open handle solves the problem of hard to open and close shipping container doors.

● **Security Lockbox**

You can rest assured knowing this padlock shield lock box helps keep your storage contents safe and secure. Made from toughened steel.

● **110 Micron Paint**

Tough wearing 110 micron paint helps protect the container from corrosion damage over time.

● **Thicker Corten Steel**

Built with thicker corten steel which helps the container resist corrosion damage and last longer.

Who Is XL Vent Container Ideal For?

● Storage Users

Just load up your container and let our increased airflow help protect your belongings from condensation damp.

The steel lockbox will provide an extra layer of security to help keep your things safe too.

And when you need to access your container the easy open handle makes opening and closing the doors almost effortless compared to other containers.

Accept nothing less than the XL Vent container when it comes to container storage.

● Self Storage Business Owners

The patented XL Vent container gives self-storage business owners the unique opportunity to maximise site space without compromising on airflow protection for customer stored contents.

Even when you position XL Vent containers side-by-side and end-to-end against other containers you will retain significantly boosted condensation-fighting airflow.

This is an unequalled container storage solution which your customers will instantly see value in and help you stand out from the competition.

And our **best container price guarantee*** offer means you can start enjoying these benefits without any extra cost!

● Global Shippers

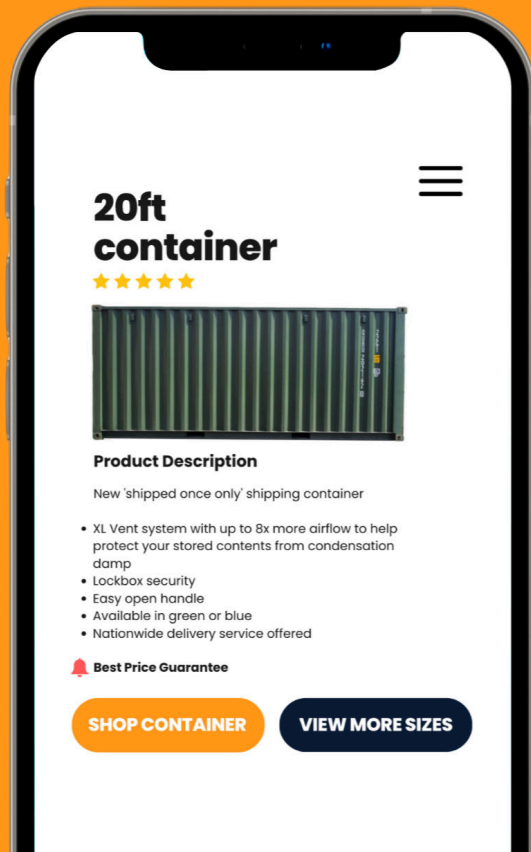

The world's largest shipping lines use XL Vent container to ship cargo.

This shipping container is built to ISO standards but with added features to help keep your cargo dry and safe.

Best Container Price Guarantee Offer*

There's Nothing Extra To Pay For The Premium XL Vent Container Features!

*We always strive to ensure our prices are the most competitive in the marketplace. Activating the best container price guarantee offer requires providing valid proof of any lower quotation by submitting the e-commerce web page link or company-headed PDF quote document to us. Alternative quotes must be from a recognised UK-based container supply company and be like for like. Adaptainer reserve the right to withdraw this offer at any time. Quick Answers to Frequently Asked Questions

Do other container vendors who claim to have multiple strategically placed vents located all around the container provide as many condensation-fighting benefits as the XL Vent container?

No. The XL Vent container is superior because not only does it provide up to 8x more airflow, it also has the ability to deliver airflow in circumstances where other shipping container vents may be blocked when the container is positioned against other containers, or a building wall.

The added condensation protection features of the XL Vent container make it the new container of choice for the UK's largest self-storage business owners.

Is the XL Vent container available for all container types?

XL Vent Vents and Header Vents are included on both new standard and high cube 20ft and 40ft containers. Subject to availability. Request at time of order

Are there other steps I can take to help prevent condensation?

Yes. There are alternative and additional layers of protection you can add. For example Grafotherm coating or insulation. These options require additional cost which ranges from several hundred pounds per container to several thousand.

Maximum airflow is the easiest, most popular and most cost effective method for reducing condensation risk.

With an XL vent container, you get up to 8x more airflow and there's no additional cost for you.

Which colours are available?

XL Vent container is manufactured in both green and blue colour. We also provide a re-spray service for an additional cost if you require a bespoke colour.

Can't I just open the doors every now and then to get air going inside the container to fight condensation?

No. When you open the doors of a shipping container you allow air moisture to enter, which if trapped after you close the doors can result in condensation and subsequent damp damage to your storage contents.

That's why it's vital to have maximum airflow so this moisture in the air can leave the container after you have closed the container doors.

XL Vent container not only introduces more air into your container but it also helps to keep the air moving, which is key to help reduce condensation risk.

Is there an additional cost for the XL Vent container features?

There is no extra cost to you so you can enjoy all the benefits of the XL Vent container without additional spend.

I'm not worried if condensation damp or mould forms in my container, so what's the advantage for me?

In the unlikely event you are not worried about condensation, remember the XL Vent container is sold with a best container price guarantee.

Also. XL Vent container is built with many other features, such as thicker corten steel to help it last longer and an easy open handle.

A shipping container with all the advantages provided by the XL Vent container will help make it easier for you to sell and get a higher resale price when you no longer require the unit too.

Now You Can Stop Worrying Whether Your Container Has Enough Airflow

XL Vent Container Helps Keep Your Storage **Safe and Dry.** Year After Year

This is a shipping container like no other. We have the patents to prove it

Now you can stop being concerned about whether your container has enough airflow to help protect your stored contents from condensation dampness.

Adaptainer's XL Vent container gives you up to 8x more ventilation. No more lack of airflow causing damp mold and mildew damage to your precious belongings.

Instead, just load up your container, close the doors and the increased airflow will help keep your storage dry and safe year after year.

“Really happy with the containers and the XL Vents make a noticeable difference”
