CABIN ACCESSORIES

CAB WINDOWS FOR ALL MANUFACTURERS

Whether in the field or on the construction site, it can happen quickly: a stone chip and the window breaks. Now it's time for a replacement. At GRANIT, we offer specialist dealers and workshops an extensive range of front, rear and door windows to suit all manufacturers and vehicle models. Our high availability and the quality of our products make GRANIT the first port of call when a windshield replacement is necessary.

Because it doesn't always have to be the more expensive original. GRANIT cabin windows are manufactured to the highest quality standards and are the perfect alternative to original spare parts due to their precise fit. Permanent controls guarantee this promise as well as compliance with safety standards for the European market.

In our in-house quality laboratory, we check that our GRANIT cabin windows match the respective original product. This makes the installation of a new GRANIT pane child's play for you and ensures a stable fit. The safety glass used and the ground edges reduce the risk of injury during installation and in the event of subsequent damage.

At GRANIT you will find cab windows for agricultural and construction machinery, telescopic loaders and forklifts. Our high level of stock ensures that you will always receive a replacement as quickly as possible in the event of a windscreen replacement. In addition, we guarantee optimal delivery to your workshop through secure packaging. Added bonus: The lower price compared to the original product will also convince your customers. This way you can always offer a fast and excellent repair service.

Discover our extensive range of windows for all manufacturers in our GRANIT Windows Special. Of course, on the following pages we also offer you the right accessories for window replacement and other cab-related products. You can find an even larger selection of spare parts for the cabin, as well as accessories, in the GRANIT webshop.

SYMBOLS

ESG

Tempered safety glass

ESG stands for single-pane safety glass. This type of window consists of a particularly shock-resistant pane produced by a special heat treatment. In case of breakage, ESG disintegrates into many small, slightly rounded, splinters instead of sharp-edged shards. Cuts can be avoided in this way. For this reason, tempered safety glass is particularly used for very large panes that require high stability.

43R

ECE Directive "43 R"

The United Nations Economic Commission for Europe establishes uniform regulations for vehicle construction, the UN/ECE guidelines. The abbreviation "43R" must be applied to new vehicle windows placed on the market in the European area. This directive contains uniform regulations for the approval of materials for safety windows and their installation in vehicles for the European market. This ensures that certain safety standards are met.

VSG

Laminated safety glass

VSG stands for laminated safety glass. In contrast to single-pane safety glass, this safety glass consists of two impact-resistant panes joined by a viscoelastic tear-resistant film.

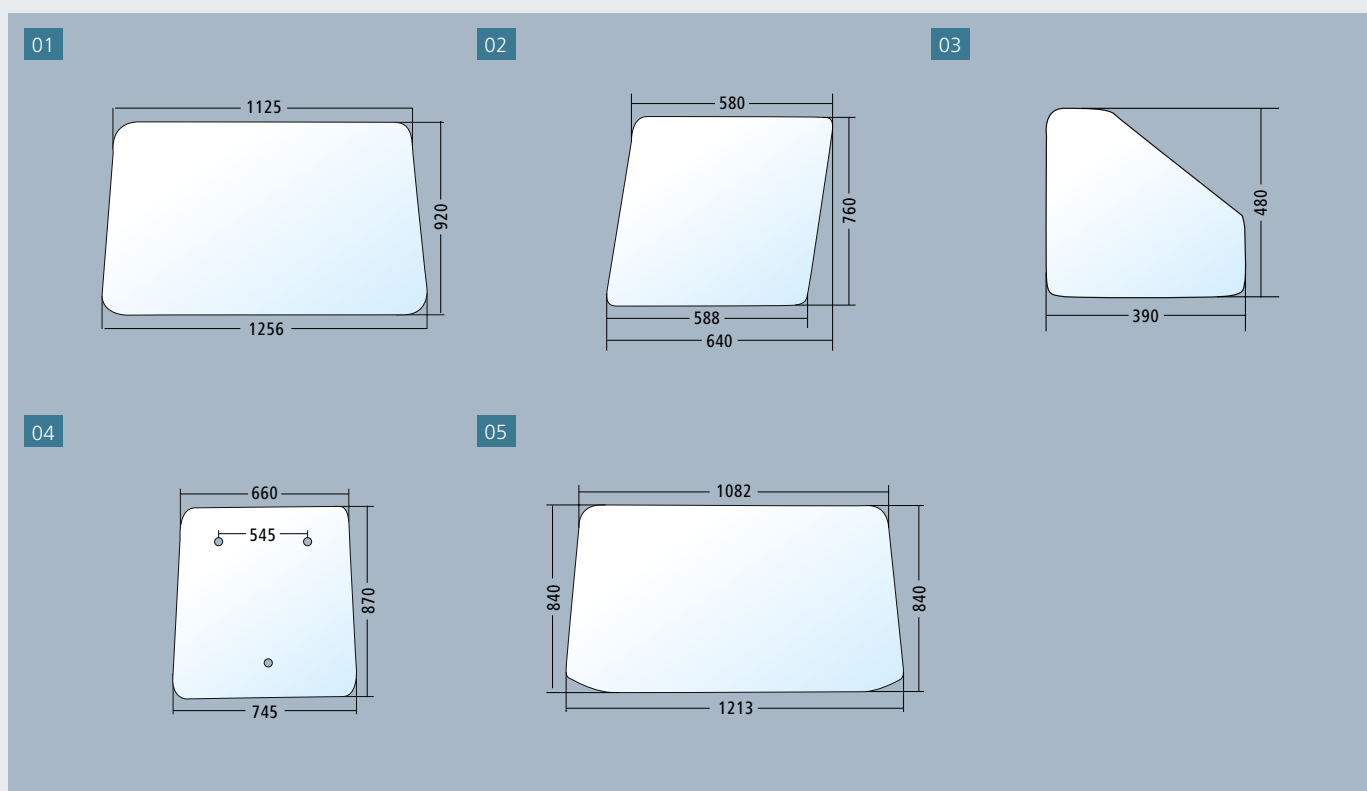

In the event of damage to laminated safety glass, the viscoelastic film keeps the glass fragments in shape. Only a spider web-like pattern is created on the glass, but no dangerous splinters can come off. Laminated safety glass also makes it more difficult to penetrate the glass and is often used as burglary protection for this reason.

E1

E-mark, country codes

This abbreviation is the country code assigned by the UN Economic Commission. The code, which is in a circle, consists of an "E" in conjunction with a number between one and 58. It is a declaration of the country in which the permission for the use of the pane was granted. For example, the country code "E1" stands for Germany.

BELARUS

Types: MTS 80, 82, 900, 920

TEST REPORT

FRONT, REAR AND DOOR WINDOWS

The GRANIT windscreens, rear windows and door windows for agricultural and construction machinery with part numbers 650886605, 650S33045R1, 650886506 and 65015S10207 were tested. The windows were compared with the corresponding products from the original manufacturers. **This product comparison was carried out in GRANIT PARTS' own laboratory.**

COMPARISON OF FEATURES

- » Transport packaging of the window panes
- » Dimensions and thickness of the window panes
- » Processing of the panes and behaviour of the pane when damaged

RESULTS OF THE TESTS

TRANSPORT PACKAGING OF THE PANES

Transport packaging is extremely important for breakable replacement parts. It determines the breakage rate during transport. A window can only be installed directly at the customer's premises if it arrives without being damaged.

- The transport packaging used by GRANIT and the two agricultural machinery manufacturers that were compared with the GRANIT panes 650886605 and 650S33045R1 has all-round edge protection and a transparent film. This means that it is easy to recognise as containing breakable glass during transport, which reduces the breakage rate. Damage can also be detected immediately upon receipt.
- The manufacturer from the construction machinery sector, compared here with the GRANIT pane 65015S10207, also uses a wooden frame that is closed by two pieces of cardboard and has a 'Caution Glass' sticker on the cardboard.
- The pane from another original agricultural machinery manufacturer (corresponding with the pane 650886506 from GRANIT) is in cardboard packaging. The pane is fixed in the box with cardboard cut-outs. On the box, a "Caution Glass" sticker can be found. However, stickers such as this are usually ineffective during transport.

DIMENSIONS AND THICKNESS OF THE PANE

The dimensions of the pane must correspond with the dimensions of the original pane. Deviations in the dimensions can lead to unwanted air gaps and in the worst case, assembly is no longer possible. The glass thickness influences the stability of the pane.

- The dimensions and thickness of the panes from GRANIT are identical to those from the original manufacturers, meaning that replacing panes is quick and easy.
- The panes from the original manufacturers can easily be replaced by GRANIT panes.

PROCESSING OF PANES AND BEHAVIOUR IN THE EVENT OF DAMAGE

The processing of the window is an important quality feature. The panes must not have any inclusions that would impair stability. The use of safety glass reduces the risk of injury to persons in the event of the glass breaking.

- The GRANIT panes do not have any inclusions. The edges of the windows were machined so that they are not sharp, which protects the seal and reduces the risk of injury during installation.
- The use of safety glass by GRANIT and the original manufacturers was confirmed during destructive testing.

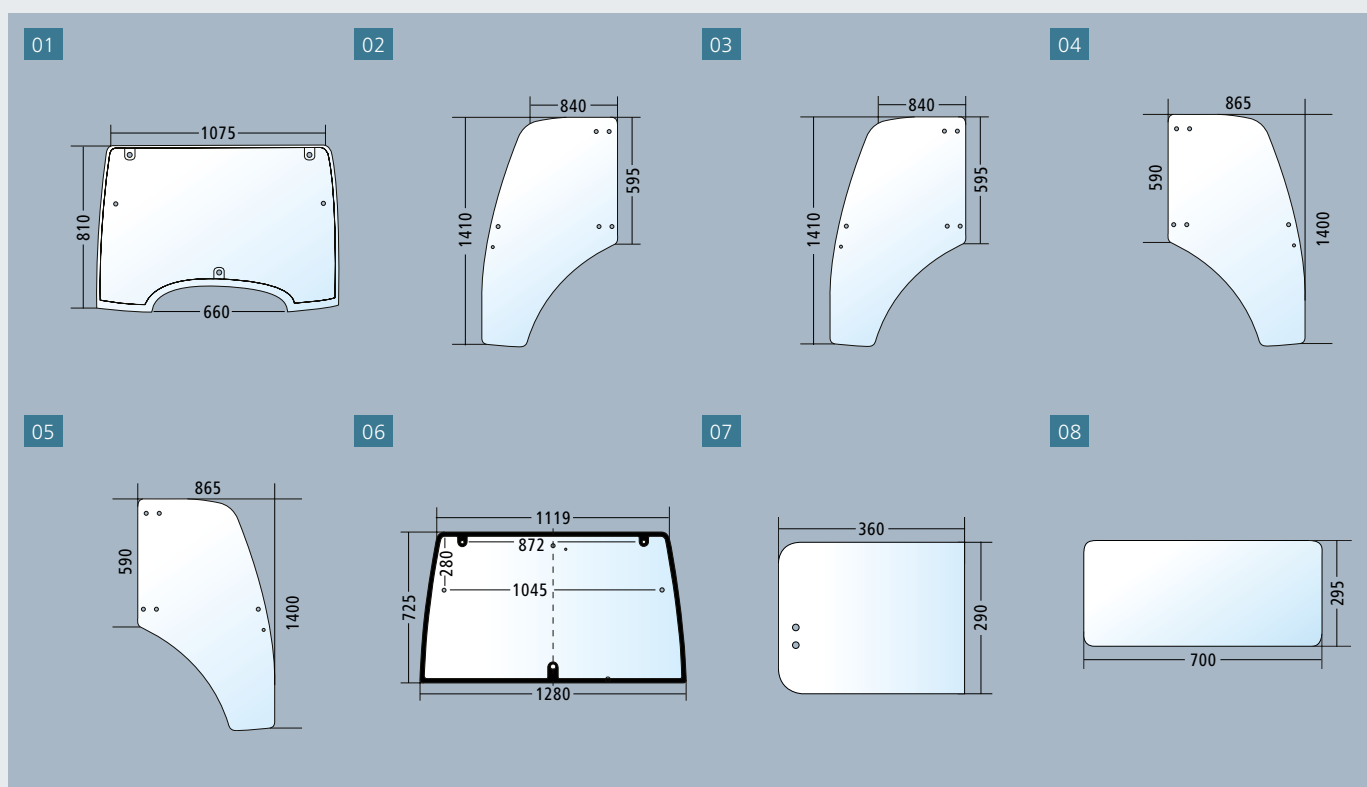

CONCLUSION

- GRANIT panes can be considered equivalent to the panes from the original manufacturers.
- The constant stock of panes from our own GRANIT brand in our central warehouse means that we can guarantee a very short delivery time for these replacement parts. This means that repairs can be carried out quickly and easily.
- GRANIT Quality Parts do what they promise and offer an optimum price-performance ratio.

CAB GLASS SAFELY PACKAGED

LINDNER

Types: GEOTRAC 63, 73, 83, 93, 103, 104, 114, 124
