

From grain intake to laboratory testing, your journey starts with us.

- 1** TPLG Grain Sampler
- 2** Perten IM9500 NIR Wholegrain Analyser
- 3** Perten AM5200 Moisture Meter
- 4** Perten Hagberg Falling Number
- 5** Charm Mycotoxin Solutions

GRAIN TESTING EQUIPMENT

For the entire journey...

FALLING NUMBER

The world standard test for alpha amylase activity to determine the starch quality.

SHAKEMATIC

Working alongside the Perten Falling Number, the Shakematic ensures samples are prepared to method standards every time.

MOISTURE METER

A benchtop moisture analyser with UGMA technology ensures accurate and fast results for grain analysis.

MYCOTOXIN TEST

Charm mycotoxin tests provide rapid, accurate and reliable detection, ensuring food safety with easy, validated methods.

WATER COOLER

A recommended accessory for the Falling Number test with no further requirement for running water.

GRAIN INSPECTION

Determine grain quality using a variety of visual inspection tools, featuring the revolutionary C-Grain and a range of microscope solutions from Vision Engineering, ensuring precise grain analysis.

GRAIN SAMPLER

The TPLG Falcon Grain Sampler offers efficient, precise grain sampling, ensuring accurate and reliable quality control

PERTEN IM9500

The Perten IM9500 Grain Analyser provides rapid, accurate grain analysis with advanced technology, ensuring precise quality control and operational efficiency

LABMILL

Correct sample preparation is a crucial part of testing, and the Perten LabMill is the perfect tool to prepare samples for grain, pellet and other raw material for oven and NIR tests
