

# Alvan Blanch

All AB dryers are designed and produced in the UK, uniquely engineered to your requirements, using latest CNC & robotic technology

## Testing Facility - whatever the product

For precise dryer sizing, on specialist products, send a sample through to our Engineering Department for testing on our dedicated laboratory test dryer. Full moisture reduction analysis reporting & final capacity quoting, unique for your project.

Models also available with additional customised design for irregular flowing products - with option for boosted fans.  
Options available for indirect heating via heat exchanger from steam/ hot water/ hot air.  
All-hot options available, where cooling is not required. Mobile versions also available.

Capacity throughput, thermal and electrical power values, and other specifications are approximate, and will vary depending on ambient and product conditions and dryer set up. In accordance with our policy of continuous development, we reserve the right to change specifications and prices at any time without notice or incurring liability to purchasers. All goods and services are subject to our published terms and conditions of sale (upon quotation).

## Continuous Dryers The 'DF' Range

The 'Double Flow' dual bed system.  
Fuel Efficient - Versatile - Consistent Drying

Product benefits

- Unbeatable performance - even at low temperatures (malt, seed etc.) due to recirculation and heat recovery.
- Uniquely versatile - for any crop. The ultimate solution for grains of tomorrow.
- If you can harvest it; We can dry it. - from any moisture, however wet, thanks to consistent, and balanced, air flow.
- Precise and consistent drying - with turnover of product and gentle conveying of product, to avoid hot spots/ streaming.
- No downtime between crops - instant, e-controlled, follow-on function. No need for emptying or refilling.
- Built to last - proven construction with an anti-corrosion finish, for multi-generational use.
- Pre-clean while you dry - the only dryer on the market with in-built dust and chaff removal.
- Auto speed control - instant response for optimum accuracy; control in your hands.
- Minimal environmental impact - naturally green: from design, to fabrication with our Sustainable Investment Programme.
- Low civils & installation cost - prepare only 150mm concrete plinth, and we can erect in 1-3 weeks. Pre-assembled, pre-wired. Ready for harvest.
- Dependability - backed by our 2 year warranty, comprehensively stocked Stores Department, and worldwide support.

UPGRADE TO AN **AB** DRYING SYSTEM TODAY.

Special features & options

- Dust House** - for collection of chaff & dust from product. The only dryer that cleans.

- Louvred Bed Technology** - for even airflow; self-clearing, with heavy duty & stainless options.

SAVE  
**35%**  
ON YOUR FUEL BILL\*

- Heat & Sound Insulation** - for improved efficiency; or to suit environmental restrictions.

- "EcoHouse"** - recovering discharged heat from dryer.

- SMART Moisture Control** - taking live moisture contents on intake and output from dryer.

- Multiple Heat Sources** - including heat exchanger from biomass

Keep in touch with your dryer, wherever you are...

\*Based on calculation of reduction in energy consumption on DF Dryer, when upgraded with options as shown above.
