

Land, Property & the Environment

Mapping solutions designed for you

Trusted by landowners and managers
across Great Britain since 1995 — for land,
property, business, and environmental
management.

What We Offer You

We can create bespoke one-off plans for your needs or deliver you a software system empowering you to create your own maps in-house and manage your assets over time.

Being specialists in GIS, GNSS and digital mapping we are always very happy to advise on and provide the best solution for your needs; and to train and support you with that solution going forwards.

Map Preparation & Consultancy

We offer free advice, as well as at cost consultancy services if you require specialised assistance. We have created hundreds of thousands of hectares of mapping content on behalf of our clients, and conversely, assisted with updating, translating, restructuring, and validating their existing content. If it involves location, we can generally help.

Training

We strive to deliver geographical solutions that require minimal instruction, even for non-specialist users. Some foundational knowledge is, however, generally required.

So, whether you are just starting out, need refresher, or more specialised training, we have your back (available at your or our offices, as well as remotely over the internet).

Support & Updates

Subscribe to our subscription service and receive immediate support via email and telephone 9-5. If it works for you, sharing your screen with us may streamline the process but we are also very happy to assist in person at our offices, or to just talk things through. No 'ticketing' or 'form filling' is involved – we toil to resolve and assist with the root of the issue ASAP. With periodic software updates you also receive the latest tweaks and all new functionality, improving your solution even further.

Our solutions

Bespoke Plans

Ask our technical experts to create bespoke maps for you. If you're short on time, don't have our software or the task is troublesome, we've got you covered.

In-House Solutions

You'll get access to software and training, giving you the freedom and flexibility to create your own maps in-house whenever you like.

Data Capture & Hardware

If no location information exists for your assets, or the information associated with them changes over time, then our GNSS surveying options are for you.

Data Supplier

Many organisations provide geographic information but identifying where it is, how to access it, terms of use and cost (if any) can be involved.

Our team will help break down these barriers:

Some typical applications for our solutions are: -

- Natural Capital
- Estate management
- Biodiversity Net Gain
- Event Planning
- Environmental Stewardship
- Farming
- Diversification
- Wildlife management
- Woodland Creation
- Planning and Development
- Asset management
- Property management

Example source organisations of geographic information include: -

- Land Registry
- Natural England
- Environment Agency
- Historic England
- CAW
- Natural Resources Wales
- County and District Borough's
- Historical Ordnance Survey
- British Geological Survey
- Forestry Commission
- DEFRA
- RPA
- Historic Environment Scotland
- Nature Scot
- Registers of Scotland
- Cranfield University
- The River's Trust
- UK Centre for Ecology & Hydrology

- Data downloads & streaming.
- Converting content between formats.
- Guidance & advice.
- Validating & restructuring content.

We are privileged to be an OS Licensed Partner and empowered to supply and license any of their products for your use. Their national datasets are the best to be found anywhere in the world.

How To Contact Us
