

PROBOSS

COMFORT MAKES A DIFFERENCE.

The days can be long and the workload heavy. When using equipment such as tractors, telehandlers, construction machinery and forklifts for long periods, the driver's comfort is the key to a safe and ergonomic workplace.

Developed by experts and experienced partners from the industry, our seats meet the highest quality standards. High-quality materials made in Germany and technical components from the world's leading manufacturers ensure maximum comfort.

We not only place high demands on the ergonomics and quality of our PROBOSS seats, but on the price-performance ratio as well. This is why we offer seats in different designs and price ranges that reflect the latest technology, and can be selected to suit the individual requirements of the driver and the machine.

To start with, the new PROBOSS range features three seats with air suspension used on both our basic and high-end models. The ergonomic seats and backrests, plus the cushions equipped with ventilation channels guarantee optimum comfort even during long periods of use. The built-in lumbar support promotes a healthy sitting position, and the elegant design with well thought-out details and high-quality fabric covers will enhance any cab.

The new PROBOSS seats are suitable for smaller and medium-sized vehicles.

The range will be gradually expanded over the coming months to include further premium models offered exclusively through specialist dealers. We wish you every success with this range.

PROBOSS

INDIVIDUAL COMFORT

The needs of the driver are the focus of the seats from PROBOSS. The adjustable lumbar support, the fine backrest adjustment and the optional adjustable armrests ensure fatigue-free work. Thanks to the high-quality cover fabrics made in Germany, we guarantee that the upholstery will stand the test of time.

LARGER ROLLERS

Thanks to larger rollers and despite their compact design, all PROBOSS seats have a smooth-running suspension system and are extremely robust at the same time. Our rollers are less sensitive to dust and dirt, and therefore achieve a significantly longer service life.

HIGH-QUALITY COMPONENTS

For maximum vibration comfort we opted for components from leading German and European manufacturers. This is how we guarantee the highest quality standards and functionality of all PROBOSS seats.

COMPACT HEIGHT

All PROBOSS seats have an extremely compact overall height and a very low Seat Index Point (SIP). Despite their low height, all PROBOSS seats offer excellent vibration comfort.

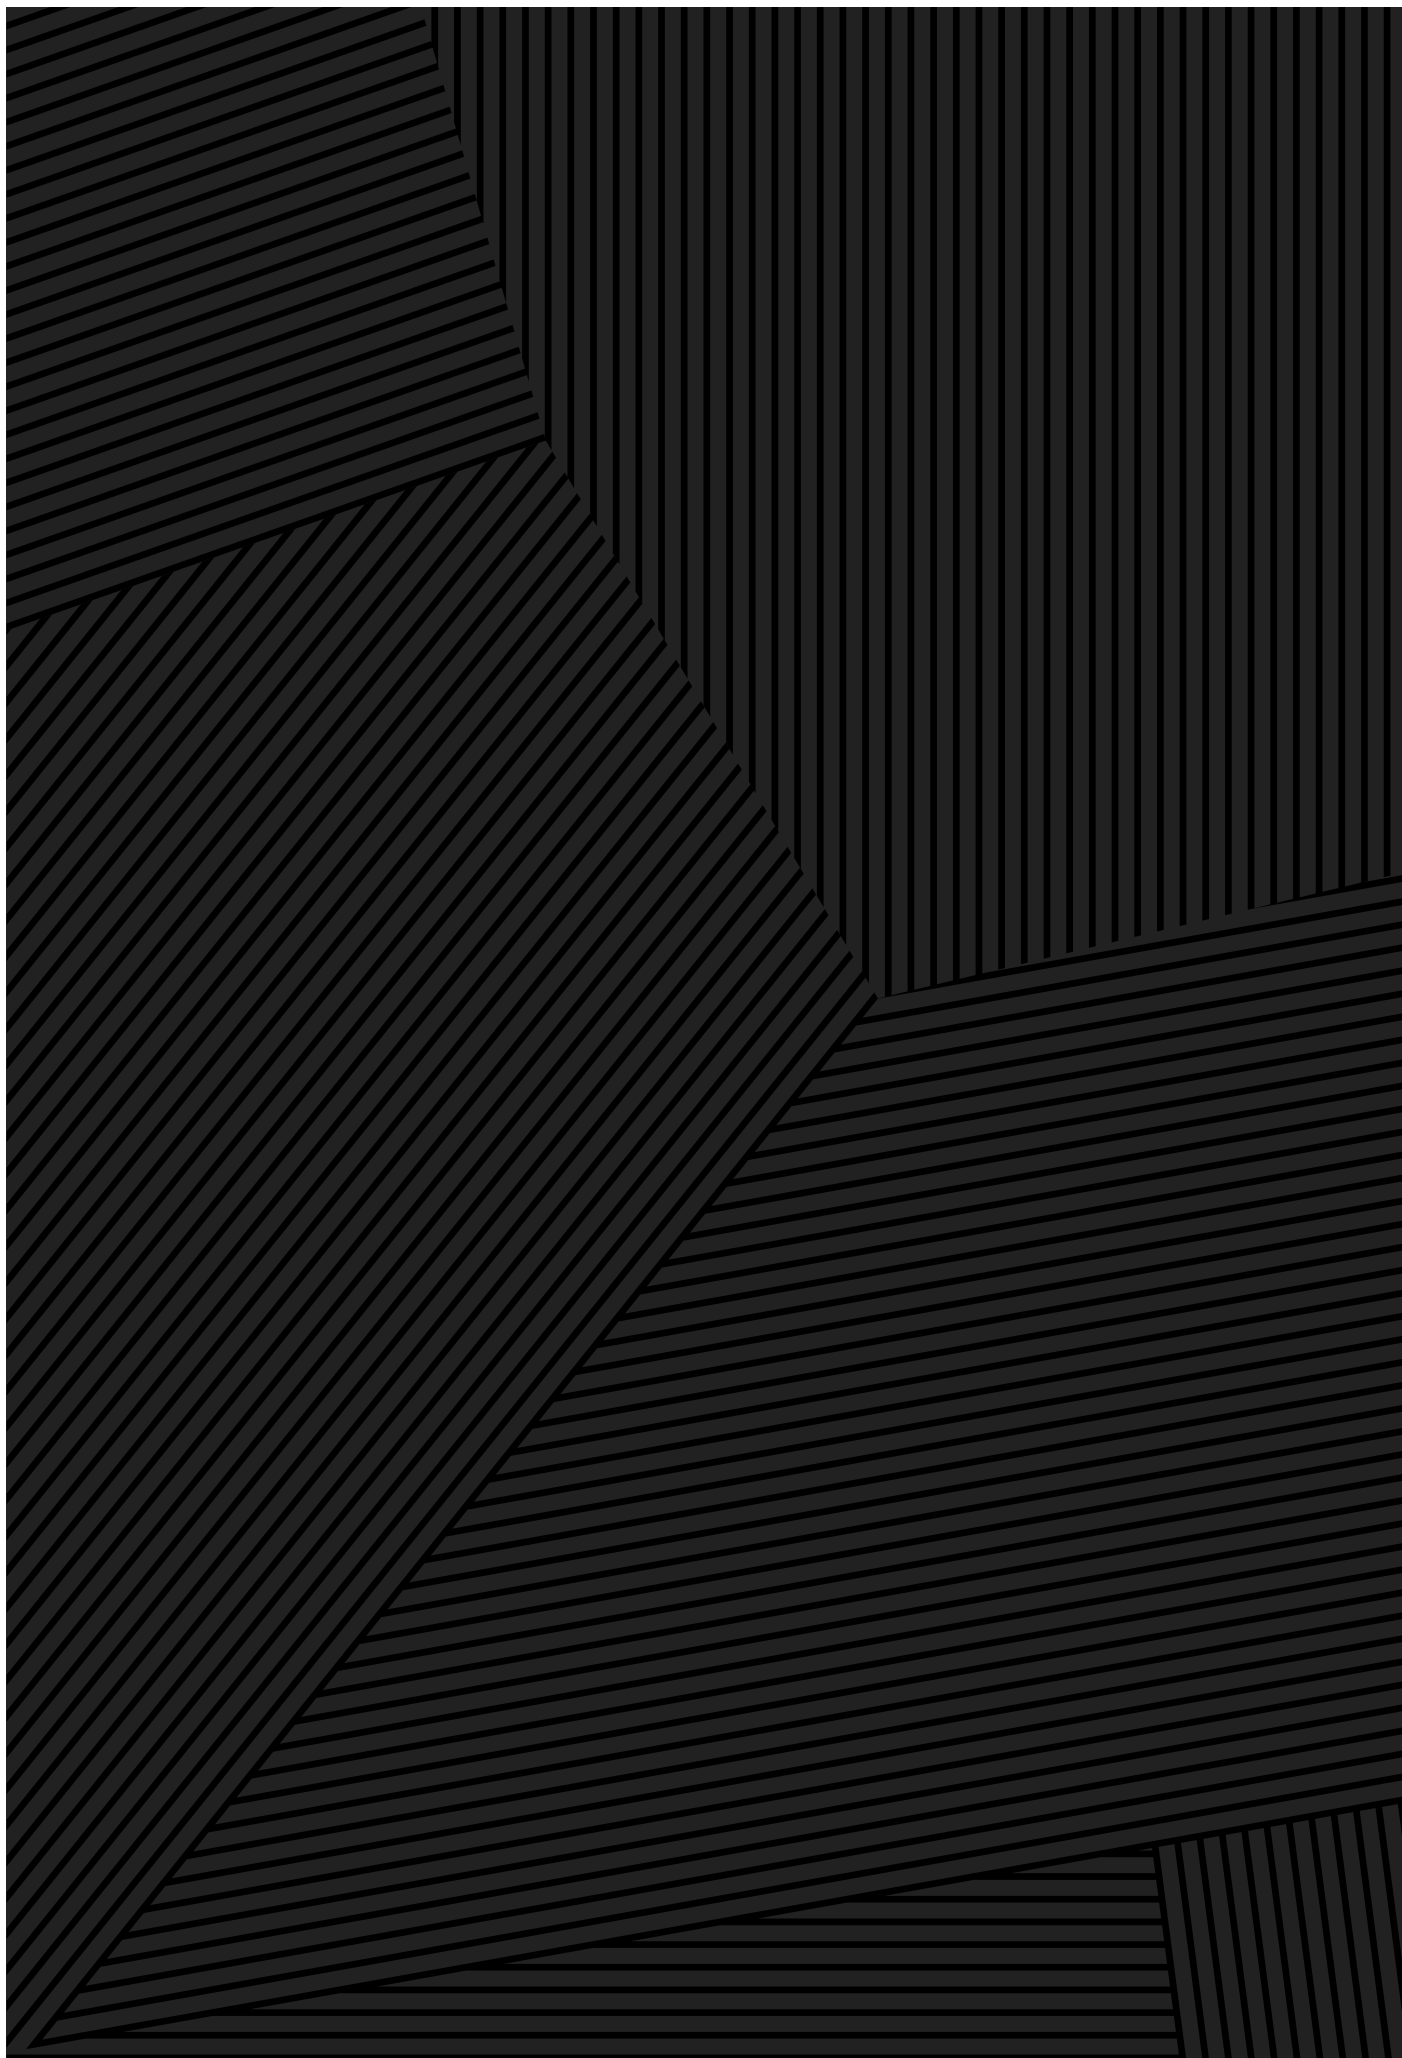

LOW-FREQUENCY SUSPENSION

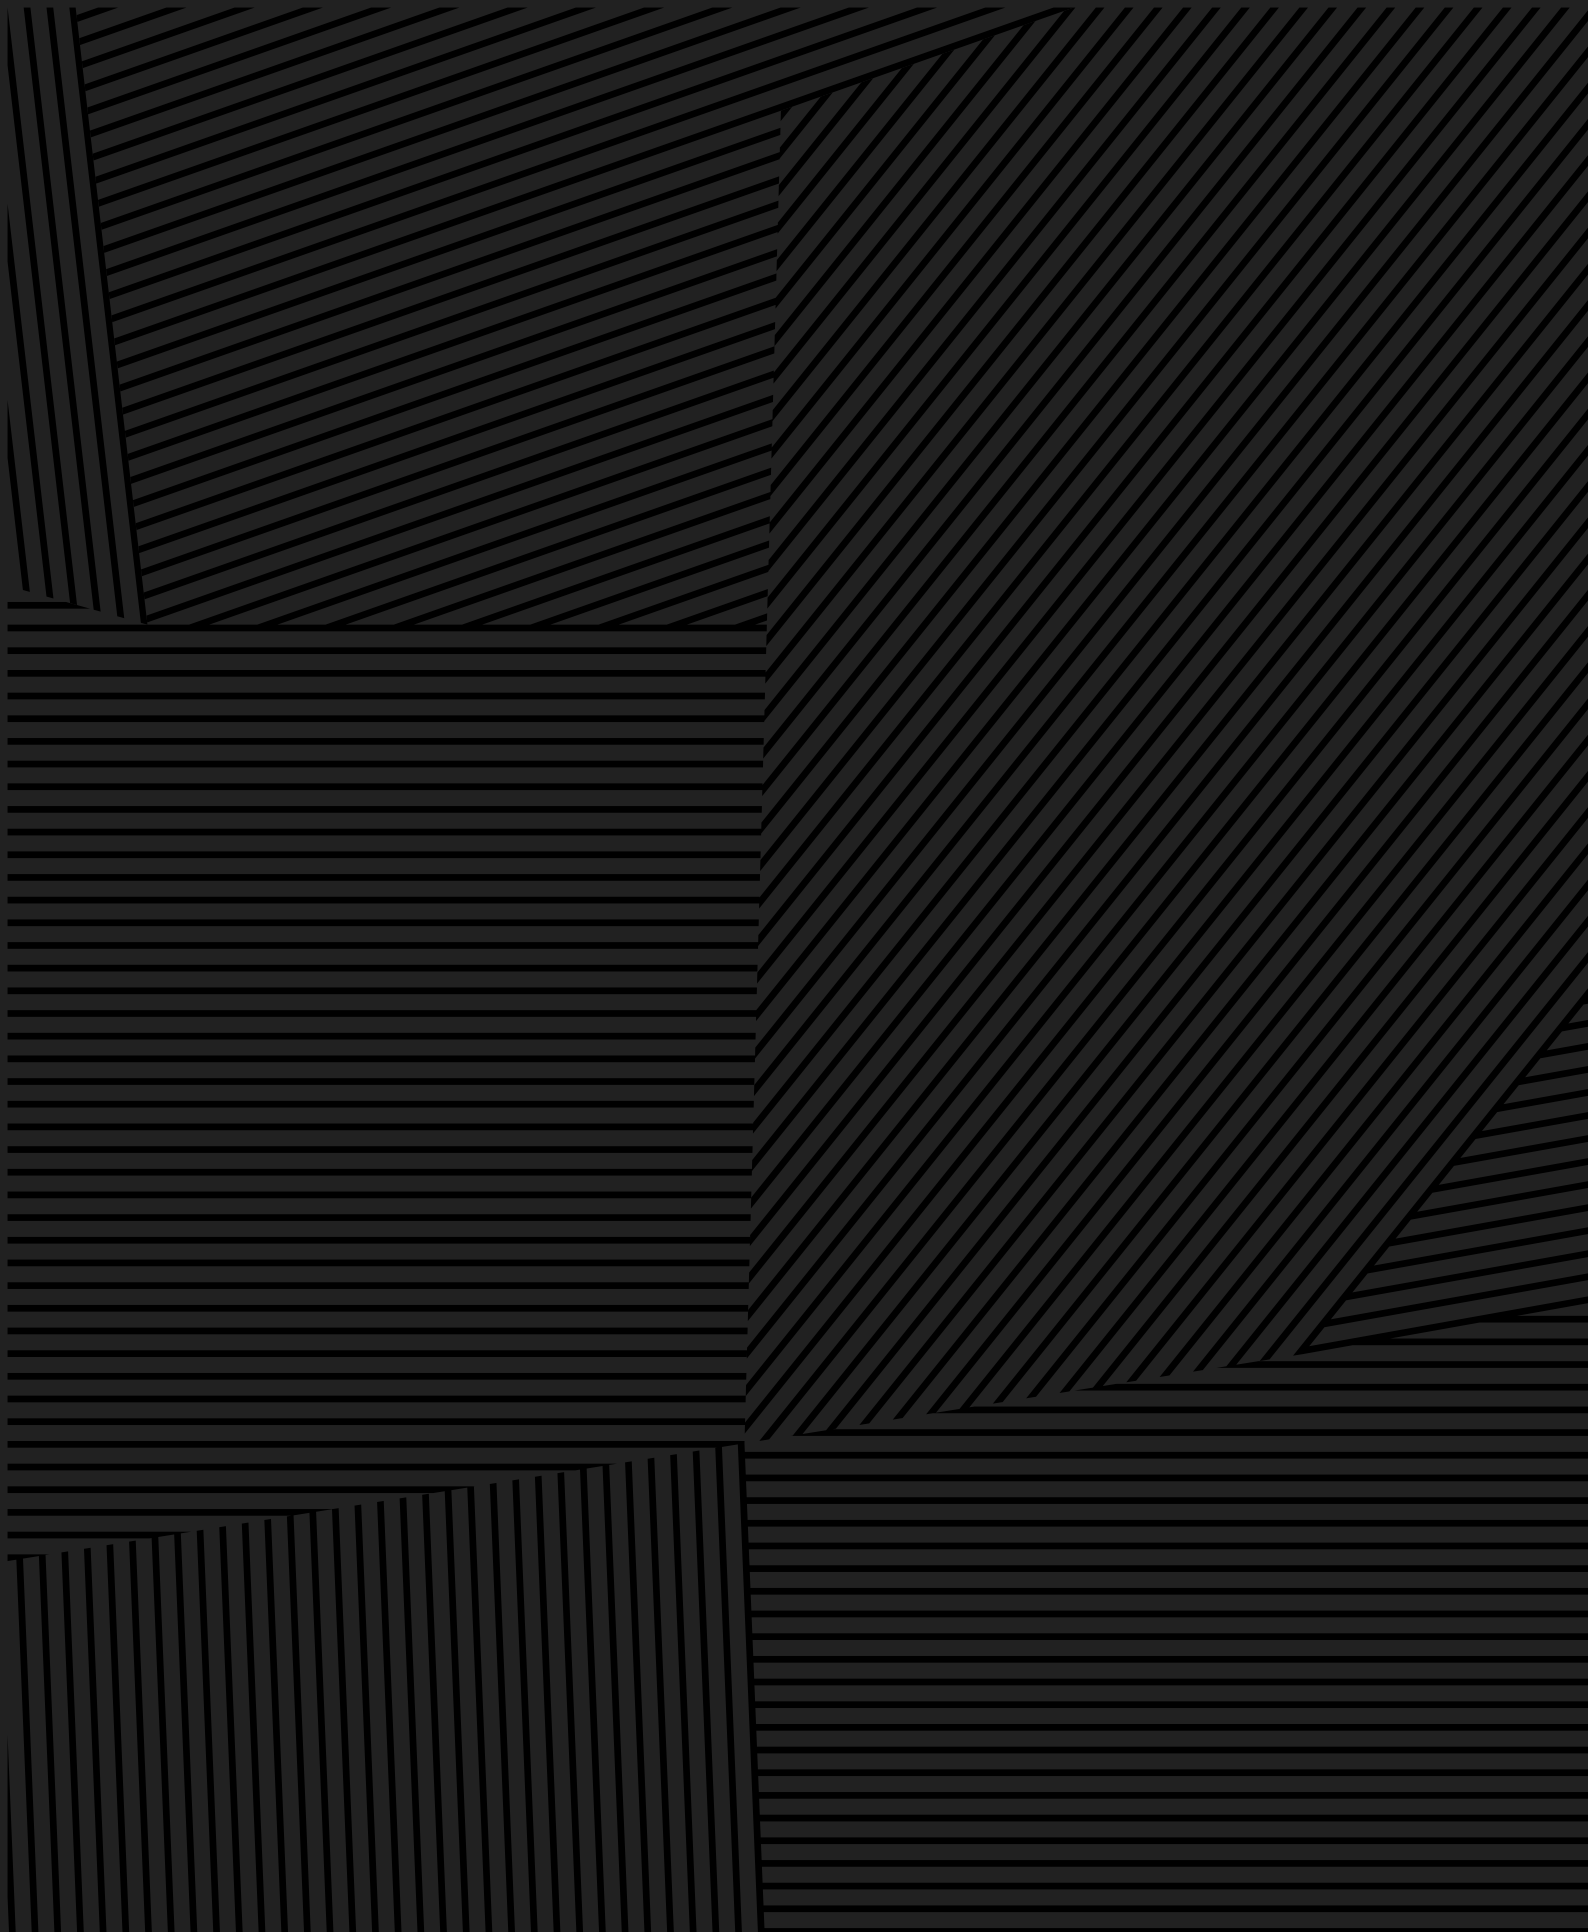

With their innovative low-frequency suspension PROBOSS seats offer maximum comfort, reducing harmful vibrations and preventing the seats from rocking during field work.

COMPATIBILITY

The PROBOSS seats are compatible and can be installed with the following seats: LS95H1/90A(R), MSG95G/721 to 741, MSG95GL/721 to 741, MSG95A/721 to 741 and MSG95AL/721 to 741.
