

Heavy Plant & Machinery.

Following years of development and testing, Fireward supplies and installs market-leading automatic fire suppression systems across the UK for a number of industries.

Heavy plant is subject to industry-wide risks, and our system ensures ultra-fast detection and fire knockdown. Equipment in high demand is used uninterrupted in some of the most arduous conditions, where there are numerous reasons why fires start.

- ✔ The overheating of engine components.
- ✔ Long hours and minimal downtime.
- ✔ A buildup of dust and debris.
- ✔ Lack of maintenance.

RISE P

Our P-Mark SPCR 199 system is available to protect your assets, as well as a range of additional safety features.

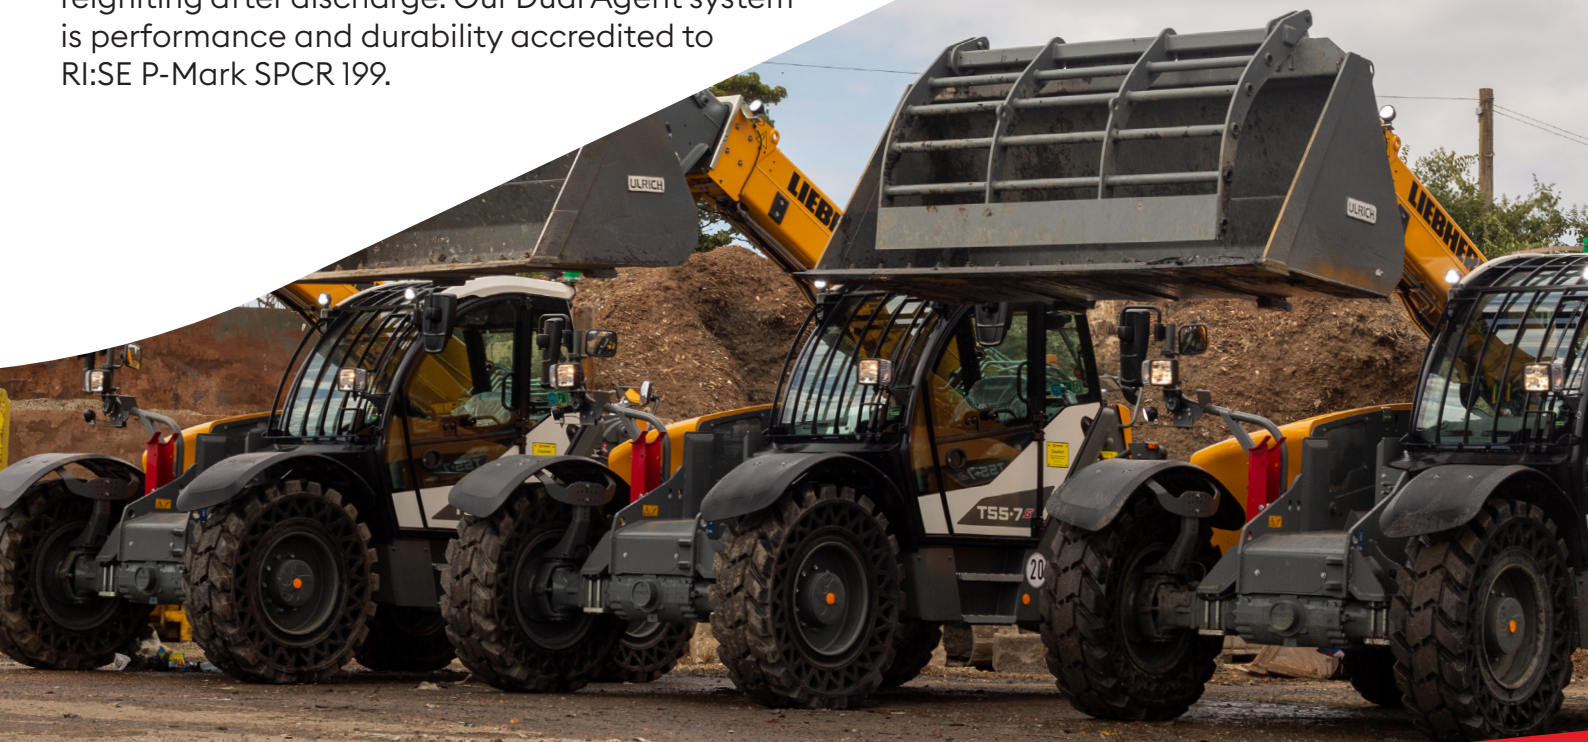

Fireward Protect Liebherr T55-7's for the Dunmow Group.

Telehandlers are versatile machines utilised across a variety of processing environments. These Liebherr T55-7's are off to work for the Dunmow Group, where they will be feeding wash plants, shredders, screeners and picking line bays. The waste management site is based in Essex, providing skip hire and recycling solutions to both commercial and domestic customers. The combination of long working hours and the materials being processed increases the risk of a catastrophic fire. The need for a reliable fire suppression system is vital, to ensure the safety of the operators, machinery and business.

Dual Agent systems are an outstanding fire suppression method due to the combined benefits of dry powder and wet chemical in one solution. The dry powder provides rapid-fire knockdown and excellent coverage, while the wet chemical has significant cooling properties. Using both agents together reduces the chances of the fire reigniting after discharge. Our Dual Agent system is performance and durability accredited to RI:SE P-Mark SPCR 199.

“ As the Fireward systems require no power to discharge, the Dunmow Group **will always** be protected from the risk of fire ”
