Crop Production Specialists

Our Services

You have a question,
we have the answer...

A photograph of two men in a field, overlaid with an orange tint. The man on the left is wearing a cap with a logo and glasses, looking thoughtful with his hand to his chin. The man on the right is wearing a cap with 'VALBOINS' on it, glasses, and a jacket with 'Omnia Precision Agriculture' and a name tag that says 'DICK ANNE' on it. He is gesturing with his hands as if speaking. The background is a blurred field.

Our services support the agronomy advice at the core of your business.

Integrated with our agronomy service, our experts and specialist services can take your business to the next level.

Our advice is independent to ensure we provide you with the right recommendation and products.

Omnia

Digital Farming

Translating Data Into Knowledge

Omnia is the next generation cloud based farm management software. Omnia allows you to collect and layer data onto field maps, which provide insights to sub field performance.

Our agronomists work with you to pair your farm knowledge with our expertise to improve efficiency, productivity and profitability.

CROP TYPE: Winter Wheat
FIELD AREA: 14.72 ha
PRESCRIPTION RATE: 165 kg/ha
TCW: 48

CROP TYPE: Spring Barley
AVERAGE YIELD: 11 t/ha
PRODUCTION COST: 0

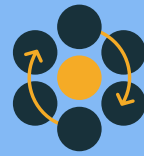

CROP TYPE: Corn
POSTURE LEVEL: 65%

**Agroecology
Services**

Applying ecological principles to agriculture

Our team help you to deliver a farm management strategy focusing on soil and plant health to produce profitable crops with minimal, targeted inputs, whilst delivering an uplift in biodiversity.

**Carbon
Services**

You can't manage what you don't measure

Our team can help you to measure and manage carbon on your farm.

We launched the first carbon mapping service through TerraMap to provide an accurate baseline measurement of carbon in the soil. Omnia is unique in providing the ability to map Carbon Use efficiency per hectare or per tonne.

Healthy Soils

Building Resilience

The key to unlocking yield

Understanding your soil and having good soil management practices can help you to optimise crop nutrition and productivity.

Our team of soil experts provide industry-leading advice and soils services to help you make soil management decisions that align with your wider business objectives.

Cu
Copper

S
Sulphur

Ca
Calcium

Mn
Manganese

P
Phosphate

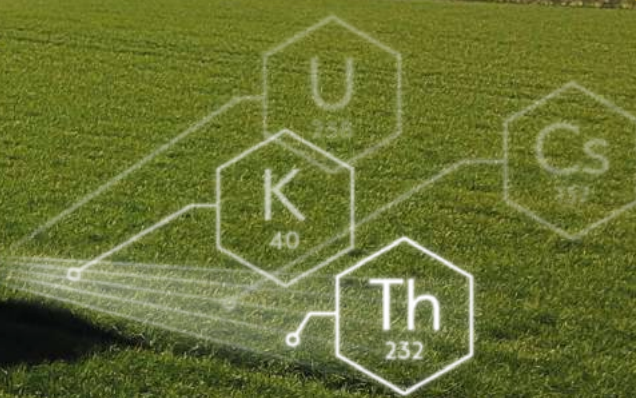

High Definition Soil Mapping

TerraMap produces the highest resolution soil mapping layers at over 800 data reference points per hectare.

The in-field process of collecting the data is carried out in two very simple steps - scanning and collecting reference soil samples.

Our agronomists can help you to understand your data and create tailored management and variable rate plans quickly and easily.

Farm Business Consultancy

Building a business fit for your future

Our farm business advice aligns with your agronomy to support decision-making on-farm. We appraise your business to implement change and increase profitability.

Environmental Services

Understanding the environmental value of your farm

We understand the practical needs of your farm business and provide tailor-made advice that aligns with both your objectives and environmental priorities.
