Size 100g

Admixture treatment

K-Obiol ULV6 Spray Application Equipment

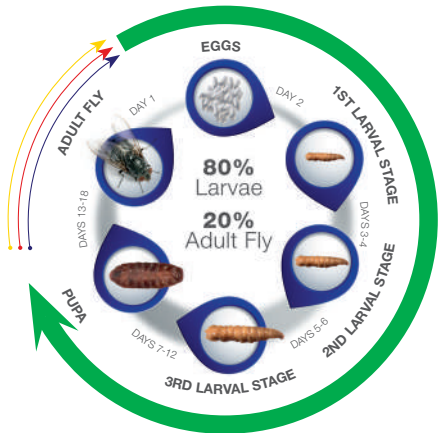

For the application of K-Obiol. Digital portable unit comprising of a pump mounted on a stainless-steel frame which fits directly onto the K-Obiol® ULV6 15 litre container. Easy to use, the pack also contains nozzle, bracket & hoses. A smart solution designed for its ease of use and spraying accuracy before grain is stored.

Product Code DDEBPUMP2013
Description Application Pump

Maggots

INTENSIVE FLY & INSECT CONTROL

Maggots 2% Cyromazine

Professional fly control for the intensive pig, poultry & livestock farmer. Maggots is a highly efficient larvicide specially formulated with the growth regulator Cyromazine to target and attack 80% of a fly's lifecycle. Easy to use the granules can either be dry scattered on slurry or sprayed after dilution in water. Effectively eliminates and controls fly larvae in animal, pig & poultry housing and waste management sites. Results can be seen on the adult fly population in approximately 2 weeks after first application.

HSE: 9553 PCS: 97296

Product Code	MG10	MG20
Description	Granular Larvicide	Granular Larvicide
Size	10kg Bucket	20kg Sack

Maggots Attacks 80% of a Flies Lifecycle

Application	Dose Rate	Treated Area
Dry Scattering	500g	20m ²
Spraying (Directly onto muck)	500g / 5L of water	20m ²
Spraying (Indirectly – through slatted floor units)	500g / 15L of water	20m ²

Sheila 1% Azamethiphos

Sheila is a ready to use granular insecticide bait for the control of flies in animal pens, livestock and animal housings. Contains specialist luring Z9 pheromones and attractants, killing flies quickly on contact and ingestion. Easy application to hanging boards and containers, treats up to 100m² and lasts longer than any other bait on the market.

HSE: 9352

Product Code	SH-2
Description	Granular Fly Bait
Size	2kg Bucket

Twenty One 10% Azamethiphos

Twenty One is a uniquely formulated product for use in poultry, pig and livestock housing. The only product that can be diluted in water and sprayed onto walls, ceiling or floors of cowsheds, stables, piggeries, poultry sheds, waste management sites and other agricultural environments. Or mixed into a thicker emulsion to be painted onto boards and hung. Contains fly pheromones and attractants.

HSE: 8851

Product Code	IFLY
Description	Wettable Powder Concentrate
Size	1kg Bucket

INTENSIVE ON FARM FLY CONTROL PROGRAMME

Fly Control

For slatted & deep pit fly control in Pig & Poultry houses

Sheila / Twenty One APPLICATION BOARDS

For use when applying Sheila and Twenty One as demonstrated in the diagram above.

Product Code S21B

Description Sheila / Twenty One - Application Boards

Eliminate Fly Problems

Sheila and Twenty One should be used in conjunction with each other to quickly and effectively eliminate fly problems on intensive farms. Place Sheila above the livestock, this will allow the unique fly sex pheromones and food attractants to attract flies that are irritating animals and kill them instantly. Twenty One should be placed below the floor slats. This hardy chemical can easily withstand these conditions and will attract and kill flies leaving muck.

ON-FARM FLY CONTROL
VIDEO PLAYLIST**

RECOMMENDED APPROACH TO FLY CONTROL IN ANIMAL HOUSING

Sheila 1% Azamethiphos

Sheila is ideal for use in fly monitoring. If fly problems are encountered in buildings this will provide a measurement of fly activity. If you start to notice flies on or around Sheila it is time to start taking action. Sheila should be applied to both sides of the fly killing boards demonstrated in the diagram on the opposite page. Use a part of an effective fly control programme.

Twenty One 10% Azamethiphos

It is beneficial to be proactive with Twenty One, this product should be used before the onset of flies. This will ensure fly problems are kept under control from the beginning of the season and it is easier to use before the animal housing is re-stocked. Apply Twenty One to both sides of the fly killing boards to increase efficacy and efficiency in fly control.

Maggots 2% Cyromazine

Maggots should also be applied when you start noticing flies. There is a short window of opportunity for the Maggots to be applied in order to quickly eliminate the oncoming problem.

Perbio Choc RTU 5L 0.64% Permethrin & 0.63% Tetramethrin

Perbio Choc RTU should be applied to fly resting areas. It is effective for up to 3 months after a single treatment, killing and controlling red mites and other flying and crawling insects within seconds. The UK's strongest, ready-to-use insecticide.

Digraim C40 WP 40% Cypermethrin

Digraim C40 WP is a highly effective wettable powder with proven long-term residual activity. Available in 3 different sizes to suit your usage. For use against flying and crawling insects in and around domestic and industrial establishments, slaughter houses, refuse tips and dustbins etc.

Organ-X Fly Trap XL

Organ-X Fly Trap XL is a non-toxic solution to fly problems. Using fast-catch technology, each trap can catch up to 40,000 flies. Just add water and hang in farm buildings, animal housing, homes, gardens and waste & industrial sites. Use as part of a fly monitoring plan.

Insectaclear Strong+

0.04% Imiprothrin 0.06% Cyphenothrin,
0.005% Pyrethrins & Pyrethroids

A high-grade formulation containing two of the newest active ingredients in the UK. The dual-action quickly eradicates any insect infestation and even those that might be resistant to other lesser actives. Unlike many other insecticides, Insectaclear Strong+ can be sprayed onto soft furnishings in domestic buildings. A tried & tested product that will resolve the toughest of insect infestations!

MONITORING & IDENTIFICATION

Monitor fly activity using sticky traps, fly reel kits and Organ-X fly bags. Keep a record of numbers and locations and identify the type of fly to determine the treatment strategy.

Organ-X Pro Formula Fly Trap XL

A non-toxic, eco-friendly solution to fly problems. Tried & tested the Fly Trap XL uses fast catch technology, each trap can catch up to 40,000 flies. Strong and sealable bag design, once water is added the formulation will begin to ferment and flies will become attracted within 1 - 2 days. For best results hang in farm buildings, animal housing, gardens, waste & industrial sites.

Product Code	FLYBAG
Description	Hanging Fly Trap
Size	XL

Digrain Fly Reel Kit Refill & Glue Roll

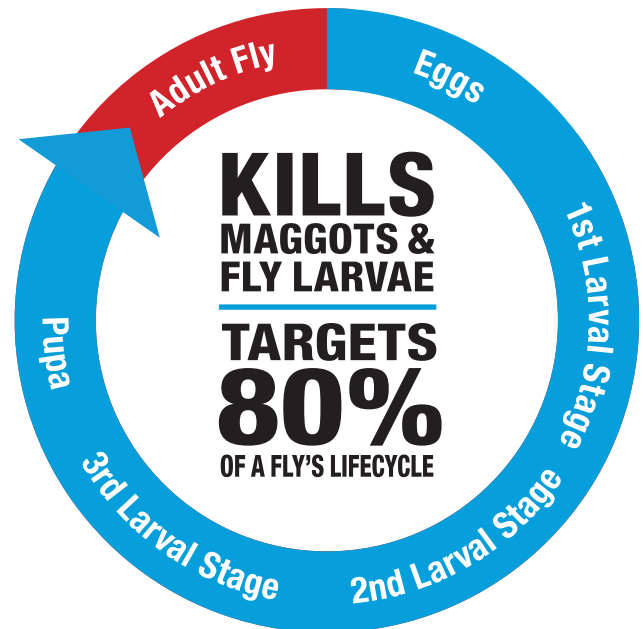

An easy to install kit designed to effectively tackle flies. A non-toxic and environmentally friendly solution to fly infestations and proven to be a successful method of fast-catch control throughout the farm. Replacement 400m Fly Reel sold separately. Eliminate nuisance flies with the Fly Glue Roll, a unique design featuring specially formulated glue for environmentally friendly on-farm fly control. Effective fatal attraction to all fly species, suitable for use in all animal housing.

Description	Fly Reel Kit	Fly Reel Refill	Fly Glue Roll
Size	Single	Single	12 Pack

LARVICIDES

Larvicides kill the larvae stage (80% of life cycle) in breeding areas using Insect Growth Regulators which interrupt the fly life cycle by disrupting the development of larvae into adult flies.

Larvenol 0.4% S-Methoprene

On farm fly control, Larvenol is an innovative insect growth regulator designed with progressive release to effectively control maggots and larvae. The unique active S-Methoprene inhibits larvae from maturing into adult flies. Apply as a granule directly to the muck or areas where flies and maggots are breeding. For use in poultry and livestock housing, including calf/animal rearing under straw bedding. Effective for up to 8 weeks depending on use and the level of infestation. Authorisation code GB-2020-1245 NI-2020-1245

Product Code	15251
Description	Granular Larvicide
Size	20kg Bucket

ADULTICIDES

Adulticides target and control the adult fly population (20% of life cycle). Knockdown Adulticides kill flies on contact with no lasting effect. Residual Adulticides leave surface residue killing flies on contact or ingestion for longer-term control.

Dairy Fly Spray 2.175% Pyrethrins

Insecticide for professional use against flying and crawling insects. A highly concentrated pyrethrum formulation that will target and control insects with fast knockdown. Pyrethrum is unique in that after it has controlled the infestation it will disappear, making it ideal for sensitive areas. For use in and around farm buildings, dairies, milking parlours, animal rearing facilities and animal housing. Suitable for fogging and misting, covers up to 15,000m³. HSE: 8454

Product Code	14218
Description	Liquid Super Concentrate
Size	500ml

Twenty One 10% Azamethiphos

Twenty One is a uniquely formulated product for professional use against flies in poultry, pig and livestock housing. The only product that can be diluted in water and sprayed onto walls, ceiling or floors of cowsheds, stables, piggeries, poultry sheds, waste management sites and other agricultural environments. Or mixed into a thicker emulsion to be painted onto boards and hung. Contains fly pheromones and attractants that lure the flies to the treated area for fast and effective control. HSE: 8851

COMPLETE FLY CONTROL

Lodi UK offer the complete fly, wasp, rodent and bird control packages for use on waste management and recycling sites.

The Lodi UK fly control products are the UK's fastest working insecticides and our range ensures that we can control any fly infestation fast and effectively. In addition, Lodi UK has full technical support and back up, including an entomology service, technical and product advice, including site visits and application solutions. Avoid a conviction for an environmental offence which may lead to adverse local and, in some cases, national publicity. For example, the EA publicises environmental convictions on its website as part of its "name and shame" policy. Also, local press may sit in on criminal court proceedings. Consequently, there may be damage to the business' reputation, even if it is found not guilty. A conviction could increase the business' insurance premiums and the business' ongoing relationship with the regulator may be undermined.

A poor environmental compliance record can cause difficulties during the sale of a business, especially if the buyer requests environmental warranties and/or indemnities.

The European rodenticide regulations are designed to ensure that such products are used correctly, in ways which minimise their exposure to wildlife and other non-target species. They limit the sale and use of professional-strength rodenticides to named

individuals who hold a certificate which is approved by the Campaign for Responsible Rodenticide Use (CRRU UK). Evidence will be required at the point of sale. Remember to always follow the product label. Lodi UK provides an e-learning course in conjunction with Lantra comprising of learning modules and a proctored multiple choice exam which upon successful completion, provides a nationally recognised and CRRU approved qualification reflecting national standards for the rodent management sector. This will enable you to purchase professional rodenticide pack sizes of 3KG and above. Please select the course link below:

Level 2 Award in Rodent Management

LODI TOTAL PRODUCT PACKAGE

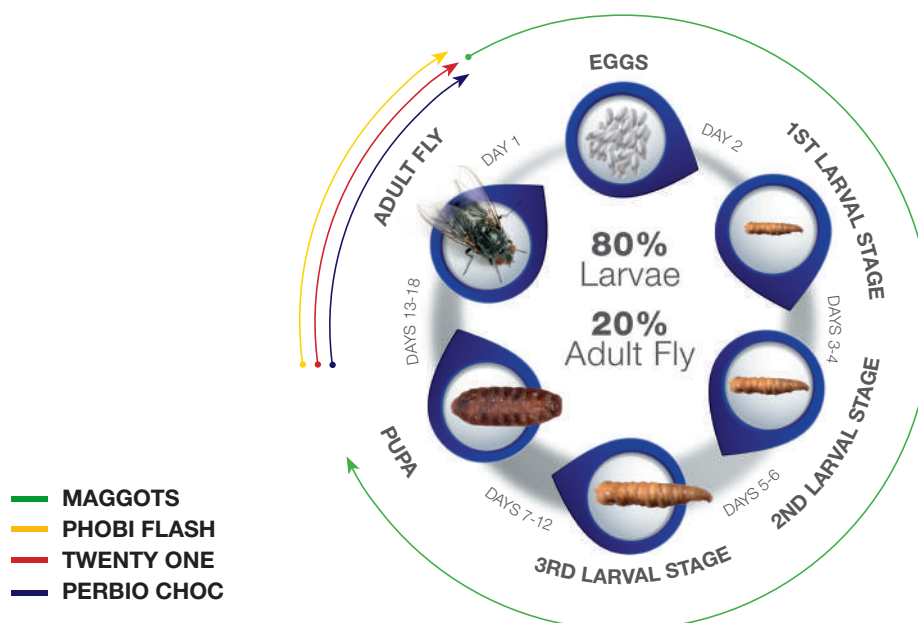

Providing Treatment from Egg to Fly

Technical Information

See our diagram depicting the life cycle of a fly at 25°C in temperature, however as the temperature increases the fly's life cycle speeds up. It is possible for a fly to complete its life cycle from egg to fly in 8 days at optimum conditions. The diagram details each of the Lodi fly control products and demonstrates the stages in which the products should be used at the relevant life cycle stages. Once the range of products is applied correctly complete fly control will be achieved. Flies cannot feed on solid matter and need to regurgitate their last meal with an enzyme to liquefy their food. It is this process that carries and spreads disease. Flies carry and transmit in excess of over one hundred diseases in which approximately 70 are zoonotic (a disease that normally exists in animals but that can infect humans).

Cost to Site Owners

Most breaches of environmental law are criminal offences. The penalties are usually a fine and/or imprisonment. For cases tried in the Magistrates' Court, the maximum penalty is usually a fine of up to £50,000 and/or six months' imprisonment. For cases tried in the Crown Court, the maximum penalty is usually an unlimited fine and/or two years imprisonment. The regulators can also prosecute the business' directors, managers, secretary or other similar officers if it can be shown the offence was committed with their consent or connivance, or was attributable to their neglect.

LODI TOTAL SERVICE PACKAGE

Providing On-Site Assistance

Waste Site Fly Service

To complete the fly control package Lodi UK are proud to announce our new technical and on site support service. This will be available seven days a week meaning that Lodi UK are the only company that offers the full fly control package. We will assist customers and solve all fly control issues. Lodi UK are able to offer the best on site fly service and can visit and solve issues on site directly. Fully armed with specialist equipment, expertise and pioneering application methods, ensures that this service provides the best possible control methods available*.

Technical Advice & Support

Lodi UK has a technical telephone service dedicated to applying Lodi products. Advice can include anything from application methods to preventative controls and monitoring systems.

Entomology Service

Lodi UK have an in house entomologist who can quickly assist in identification of fly species in order to assist you on fly control methods and knowing your pest.

* The on-site fly control service will be assessed individually and provided at a cost

AMENITY PRODUCTS

The following Lodi UK products are registered for use in and around waste management and recycling sites to control flies, wasps, rodents and birds.

Product	Image	Description	Application Rates & Tips	Page
Maggots		Maggots is a highly efficient larvicide that attacks the maggot and stops it developing into a fly.	Use Maggots insect growth regulator as part of an integrated approach. Spray directly on to waste to eradicate fly larvae and stop the development of nuisance flies. It is recommended to use with adulticide fly products, including baits and those with a different mode of killing or trapping action. Application rate: 100g of product per tonne of waste	22 23 25
Twenty One		Twenty One is a uniquely formulated wettable powder for the control of both biting and non-biting flies in waste management facilities and waste bins. Quick, effective and long-lasting capability of up to 12 weeks, Twenty One is the only product that kills by both contact and ingestion. To control non-biting flies such as common and lesser housefly, mix with water or flat coke. It is best to paint in stripes onto walls, surfaces or boards which can be hung up. These particular flies are attracted by the sexual pheromones and like to feed on the attractants, killing them by ingestion as well as by contact.	Tips: <i>It is proven that the best way to mix Twenty One is with flat coke. Yes I said flat coke! The acidity and extra sugar enhance the azamethiphos active ingredient. If applying as a paint onto boards apply in broad stripes. Flies will land on the untreated area and then walk and feed on the treated area.</i> Application rate: Apply as spots to surfaces where flies congregate. Paint: Mix 500 g of product with 500 ml of lukewarm water covering approximately 5-10 square metres in total area. Spray: Mix 125 g of product with 5 L of lukewarm water then apply diluted product by spray to 100 square metres of surface. In case of very high infestation, mix 250 g of product with 2 L of water.	23 25 33
Digrain Cyperbio		A highly effective, broad spectrum, water-based insecticide with long term residual activity. An insecticidal surface spray for use in public health, food storage practice and waste sites. Ideal for both flying and crawling insects such as flies for long term residual activity of up to 12 weeks.	Application rate: For heavy infestations: Dilute 250ml of product with 9.75 litres of water then apply 1 litre of diluted product per 25 metres of surface spray or spray short bursts directly at insects. For routine treatment: Dilute 50ml of product with 7.95 litres of water then apply 1 litre of diluted product per 25 square metres of surface.	26
Perbio Choc		Perbio Choc is the strongest ready to use fly spray in the UK and 4-5 times stronger than any other comparable insecticide. Contains both 0.64% Permethrin and 0.63% Tetramethrin, nothing can compare to its ultimate power when killing all types of insects from flies to wasps. Perbio Choc is a residual insecticide so best used where surfaces are not cleaned down as often to allow for more flies to and insects land on treated areas and achieve amazing results. It can be both sprayed and fogged. Its coverage goes a long way, 625m ² surface treatment and 12,500m ³ aerial fogging treatment.	The secret with Perbio Choc is to apply it very finely, almost misting on to surfaces with no run off. If you see run off, you are applying too much product and we would advise changing to a finer nozzle. Due to the strength and carrying solvent of Perbio Choc you do not need to apply the same amount of product as weaker everyday fly sprays. If applied correctly Perbio Choc works out more than half the price of weaker formulations which won't give the same coverage. If a fly infestation or wasp invasion has got out of control Perbio Choc will quickly eliminate all in one treatment. Long lasting, up to 3 months. Application rate: Surface spray: Apply 50ml of product per 6.25 square metres Fog/ULV: Apply 0.4ml of product per cubic metre of treatable volume	25 27
Digrain Wasp & Hornet		The UK's strongest wasp aerosol with a spray length of up to 18 feet!	Fires 18ft of 0.25% Permethrin 0.24% Tetramethrin strong killing spray with quick results. You walk right up to the nest spraying and destroying it. Application rate: Spray product for 15-18 seconds per nest from a distance of 2-3 metres or spray short 1-2 second bursts directly at insects.	30
Digrain Control		The strongest fly control aerosol on the UK market containing two actives! 0.25% Permethrin 0.24% Tetramethrin. A giant 600ml can to ensure that flies can be controlled quickly around your buildings.	The strongest flying and crawling Insect killer aerosol on the market. Loved by everyone. Fast results. Application rate: Apply a 10 second burst per square metre of surface or apply short 1-2 second bursts directly at insects.	31
Digrain C40 WP		A highly effective wettable powder containing a broad-spectrum synthetic pyrethroid residual insecticide for professional use in and around industrial establishments, including refuse tips and waste sites. The active, Cypermethrin, 40%, is formulated for the control of flying and crawling insects including houseflies, cluster-flies, mosquitoes, and wasps.	DIRECTIONS FOR USE: Add 1-2 litres of clean water to the sprayer, and then add the product according to the table below. Use the blue scoop provided with this pack for dispensing the product. A 'rounded' scoop of product measures approximately 10g. Add the remainder of the water. Shake the sprayer to mix contents 1 litre of ready-for-use spray treats 25 square metres of sprayable surface. APPLY AS A COARSE LOW PRESSURE SPRAY AS FOLLOWS: Crawling insects: Apply spray to harbourages, resting places and vertical and horizontal surfaces where insects are seen. Pay special attention to cracks and crevices especially around animal sleeping areas. Houseflies, Cluster-flies and Mosquitoes: Apply spray to walls, ceilings and areas where pests rest. Do not treat exposed food or food preparation areas. Wasps: Spray the nest entrance and the surfaces upon which wasps alight.	25 31
Digrain Force EW		Digrain Force EW is a high strength EW concentrate combining actives to ensure fast and effective control with long term residual. A great all-round product packed with a high level of active ingredient for the successful control of flying and crawling insects such as flies and wasps. A highly effective, specifically formulated concentrate containing 14.5% Cypermethrin, a fast-acting neurotoxin in insects, 4.5% Tetramethrin, which also affects the insect's nervous system as a potent synthetic insecticide & 19.3% Piperonyl Butoxide which acts as an insecticide synergist, inhibiting the natural defence mechanisms of the insect to the actives.	DIRECTIONS FOR USE: Add a small quantity of water to a suitable compression sprayer and then add a product according to the table below. Add the remainder of the water, close the sprayer securely, shake to mix contents. One litre of RTU spray treats 20sqm of the surface. Target Pest: Crawling insects Routine treatment, 25mL of the product with 5 litres of water for maintenance and spot treatment. Heavy infestation, 50mL of the product with 5 litres of water for attack and clean-out treatment. Target Pest: Flying Insects Routine treatment, 25mL of the product with 5 litres of water for the control of resting insects.	31
Digrain Bugster EC		Digrain Bugster is a brand new all-purpose professional-use insecticide by Lodi UK. Designed for use when both hot or cold fogging and as a surface spray, it's an effective control method against flies for waste sites. <ul style="list-style-type: none"> Fast knockdown 8 to 12-week residual All-purpose insecticide treatment Suitable for spraying and ULV cold & thermal hot fogging 	Directions for use Surface treatment: Against crawling insects, the product should be applied where insects can be found, namely along skirting boards, pipes, the corners of walls, cupboards, below devices that generate heat. Against flying insects, the product should be applied where insects can be found, namely on windows, door frames, beams and walls. In the case of regular use, the product must first be diluted 200 times in water (for example, 20 ml/4 litres of water) before being applied in quantities of 4 litres of liquid per 80m ² . In the case of substantial infestations, double the dose (for example, 40 ml/4 litres of water) before applying in quantities of 4 litres of liquid per 80m ² . Leave the building 30min to 2h before reentry. Fogging treatment: Only for inside use. Cold fogging: The product must be diluted 100 times in water (40 ml in 4L for 400m ³) Hot fogging: The product must be diluted 200 times in water (20ml in 4L for 400m ³) Leave the building sealed for 4-6 hours after treatment.	26

Product	Image	Description	Application Rates & Tips	Page
Digrain Fly Reel Kit & Refill		Easy install, non-toxic, environmentally friendly and proven.	An easy to install kit designed to effectively tackle resting flies. Particularly good for hanging in large areas just above the working areas. As the fly looks for somewhere to rest it is attracted to the thin sticky white tape where it is caught and trapped stopping it from potentially laying more eggs. The kit is useful to monitor fly activity.	28
Digrain Glue Roll		Unique design with fly sex pheromones and specially formulated glue for non-toxic control of flies on the farm.	The unique design combines a specially crafted surface impregnated with fly sex pheromones and covered with specially formulated attractive glue. It can be used as part of your fly monitoring process.	28
Phobi Flash Dose		Phobi Flash is a concentrate based on natural pyrethrum synergised with PBO. Highly effective knockdown of flying and crawling insects. This fantastic product is ideal for areas where fast knock down is required, leaving no insecticide residue after treatment. Ideal for areas that are cleaned regularly or sensitive to insecticide use. There is no tainting or smell and it can be sprayed or fogged. Any fly or wasp hit with this product will die very quickly.	Application rate: Spray: For flying insects dilute 5-10ml of product with 500ml of water. Apply 50ml of diluted product per square metre. For crawling insects dilute 10-20ml of product within 500ml of water. Apply 50ml of diluted product per square metre. ULV Spray: For flying insects apply 100ml of undiluted product per 3000 cubic metres. Mist: For flying insects dilute 100ml of product within 900ml of water. Apply 1000ml of diluted product per 3000 cubic metres.	30
Phobi Caps		Phobi CAPS is a micro-encapsulated insecticide containing different sized capsules within the active for regular and continuous release. Prallethrin, 0.46%, gives the product a shock effect while the encapsulation of the Cypermethrin, 9.2%, active ensures stability to light, temperature and humidity. Non-staining, odourless, and effective on both porous and non-porous surfaces, Phobi CAPS is suitable for use in and around waste management and recycling sites designed to target crawling & flying insects such as spiders, wasps, flies and mosquitoes.	INSTRUCTIONS FOR USE: Shake the bottle before use. Dilute 50ml of product in 5L of water per 100m². SURFACE TREATMENT: Remove the filters in the front of the nozzle to protect the capsules and use a sprayer with a maximum pressure of 3 bar. Spray 1L of diluted solution over 20m². After treatment, the water evaporates leaving the micro-capsules on the surface. Indoors, ventilate throughout the treatment and ventilate before re-occupying the premises (on average 30 minutes to 2 hours depending on the level of ventilation). ACTION: Fast knockdown and long-lasting residual. After treatment, the treated surface is covered with thousands of micro-capsules. PHOBI CAPS works in less than 15 minutes and protects treated surfaces up to 12 weeks. Only treat again if a new infestation occurs.	30
Phobi F&F		The Phobi F&F One Shot fogging device is formulated with the proven combination of actives used in the Phobi range (Imiprothrin & Cyphenothrin). Faster and more effective than any other comparable product on the market.	Phobi F&F is a one-shot aerosol. Once activated, the aerosol will empty entirely. Application rate: Activate the aerosol with a quarter turn twist clockwise until it locks. Ensure you leave the area of application immediately and close any doors / windows etc behind you. For best control of pests leave the treated area for at least 2 hours before re-entering. Thoroughly ventilate the treated space before entering (between 2 hours to half a day, depending on the possible ventilation level).	30
Organ-X FlyTrap XL		New stronger, sealable bag. The Fly Trap XL is a non-toxic solution to fly problems. Using fast-catch technology, each trap can catch up to 40,000 flies. Just add water and hang in farm buildings, animal housing, homes, gardens and waste & industrial sites. <ul style="list-style-type: none">Just add waterNon toxicFast catch technologyCatch up to 40,000 flies	To install, simply add water, leave the top-secret attractant to ferment for two days and hang. Hang the fly bag inside and outside of the building for constant monitoring of fly activity. Keep the water topped to the line as it can evaporate in warm weather.	25 28 36
Quartz		A new formulation to the UK market that disables insects fast and controls infestations within hours. It's very easy to use and should be applied where insects reside, in and around buildings.	Fantastic on wasp nests due to its non-agitating formula to reduce the risk of stings. Low in toxicity. Apply 50g of product per wasp nest. Application rate: 10g (ants), 15g (bedbugs, fleas, cockroaches) per square metre, or 50g (wasps and hornets) per nest.	28
Application Boards		For use when applying Twenty One in stripes to boards ready for hanging in waste facilities.	Ideal for applying Twenty One fly bait and hanging around your waste facility to attract and kill flies. Great for visual indication of fly activity and monitoring.	24
Harmonix		Revolutionising rodent control Harmonix® Rodent Paste is a market leading non-anticoagulant for controlling rodents. Cholecalciferol active and stop feed effect technology provides farmers with an innovative and flexible solution to rodent problems, which left untreated could lead to disease, property damage, fire risk and costly repairs. Available in an optimised bait matrix and supplied in modern, sustainable packaging.	Proven infestation control within 7 days with 50% less bait and no known resistance. Revolutionising rodent control in UK farming, Harmonix® reduces the risk of non-target species secondary poisoning. The Cholecalciferol active is non-bioaccumulative and non-persistent in the environment. Expert and exclusive formulation, Harmonix® is the best and most effective ready to use rodenticide for outdoor use, waste sites, open areas and burrows. Stop feed effect occurs after 2-3 days reducing rodent activity and appetite.	9
