

GREENCROP PRODUCT OVERVIEW

CLEAN WATER & SLURRY APPLICATION SOLUTIONS

GREENCROP

GREENCROP PRODUCT PORTFOLIO & MANUFACTURING

At Greencrop, we deliver reliable, high-performance solutions designed to meet the evolving needs of modern agriculture. Our comprehensive range of equipment combines robust engineering with practical innovation, ensuring efficiency, durability, and ease of use across every task.

Our main product lines are clean water which is predominantly root crop irrigation on the east side of the UK. The second part of our portfolio is dirty water & slurry. this is all things pumps and spreading including dribble bars and tanker as well as screw press separators.

GREENCROP VACUUM TANKERS

Engineered for maximum suction and discharge efficiency, our vacuum tankers are built to handle slurry and waste water. Designed for durability and minimal maintenance, these tankers offer smooth operation across a range of farm applications. This is mainly for slurry application on the fields for which we offer a range of tankers from 1500 gallons all the way to 4000. these have various axle configurations and large flotation tyres.

GREENCROP PTO SLURRY PUMPS

Heavy-duty and highly efficient, our PTO-driven slurry pumps are ideal for high-capacity transfer tasks. With solid build quality and excellent performance even under demanding conditions, they offer farmers reliable slurry management with minimal downtime.

Our main portfolio for PTO slurry pumps include basic pipework and then a full pipework set up with return to tank function and hydraulic knife gate valves so the operator can prime and divert without leaving the tractor seat. We offer both the market leading DODA pump and also the Veneroni RKT100 style which has excellent capacity and efficiency figures.

GREENCROP IRRIGATION PUMPS

Purpose-built for agricultural irrigation, these pumps deliver dependable water movement with **energy efficient operation**. Whether drawing from rivers, lagoons, or tanks, Greencrop irrigation pumps provide consistent pressure and flow, ensuring crops receive exactly what they need. The pumps range from 55 hp all the way to the flagship 125hp with the fully legal T5 system. Greencrop also offer a 6 cylinder skid unit pump with 170hp for capacity up to 270 cubic metres per hour.

IRRIGATION REELS

Our range of automated irrigation reels offers easy setup, reliable retraction, and uniform water distribution. Designed to apply accurate water for the most valuable crops. These systems suit a wide variety of crop and land types, providing a smart solution for every irrigation need.

The range of reels includes small horticultural machines electrically driven all the way to the large 700m long machine. The standard machine is 110/500m offering the grower maximum versatility.

SEPCOM SCREW PRESS SEPARATORS

A powerful tool for managing slurry and waste separation, SEPCOM screw presses offer high efficiency in extracting solids from liquids. Perfect for biogas plants, farms, and industrial applications, they help reduce waste volume, cut disposal costs, and support sustainable practices.

The SEPCOM Screwpress comes in an 015, 045 and 065 model depending on the users needs. The press will deliver up to 50 m³ per hour throughput. The SEPCOM also has the Eco-Bedding model which allows maximum recycling of product for bedding cattle and animals.

DRIBBLE BARS

The Greencrop dribble bars are largely custom made to the farmers needs, this can range from 7.5m all the way to 30m. the dribble bars can be tanker mounted or umbilical. the Greencrop dribble bars come with the industry standard tricoflex pipework and the option of Alrena Macerators, either single, twin, horizontal or verticle.

KEMPER GRASS & MAIZE HEADERS

Precision-built for superior harvesting, Kemper headers are renowned for their clean cut, fast throughput, and compatibility with a range of forage harvesters. Whether it's grass or maize, these headers maximise yield and minimise crop loss in every pass.

The Kemper header will fit a New Holland SPFH or a Claas. the maize header ranges from 4 row big drum series to a 12 row small drum series allowing harvest width of up to 3.9m.
