

DON'T LET FIRE RUIN YOUR HARVEST

Hotter, drier summers mean **greater** fire risk. NFU Mutual reported **258 combine fires** in 2023, leading to **£7.4 million** in claims.

Even with **regular cleaning** and **maintenance**, fires can start in **seconds**.

Fireward's Automatic Fire Suppression System **rapidly** detects and suppresses fires, **protecting** both operator and machine and **minimising** downtime in a busy harvest period.

How it works

Pneumatic Detection

Our UL-approved pneumatic tubing detects fires in seconds—no power required.

The tubing is installed around engine bays, hydraulics and debris-prone areas, the tube bursts when heated, triggering the cylinder to discharge agent through nozzles onto those high-risk areas.

Dual Agent Protection

Dry powder for rapid fire suppression coupled with the prolonged cooling effect of wet chemical agent ensuring no reignition.

Optional Safety Features

We offer a wide range of additional safety features such as:

- Manual actuation
- Engine shutdown
- Battery isolator
- In-cab monitoring
